Dear Jeremy,

On behalf of Arrhythmia Alliance we would like to make the following statement in response to the above guidance review.

Arrhythmia Alliance is pleased that this seems to cover all of the patient groups that would benefit from the therapies and we feel that it will only benefit patients further by combining the guidance for ICD and CRT devices which they have done. The value placed on quality of life for those affected has been considered and there are no additional groups that we feel would be suitable for these treatment options. Perhaps our only point would be to emphasise the importance of primary prevention, ensuring screening for those who are at risk of arrhythmias that lead to SCA and may require an ICD/CRT device.

Please can you confirm receipt of this and if there is anything else that you require.

Many thanks

Yours sincerely,

Kind Regards,
