Guideline Consultation Comments Table
10th June – 1st July 2010

Type	Stakeholder	Order No	Document	Page No	Line No	Comments Please insert each new comment in a new row.	Developer's Response Please respond to each comment
SH	The National Society for Epilepsy (NSE)	1				The clinical feature assessment criteria could be expanded to include key features directing towards a differential diagnosis of epilepsy. Suggest amend/expand slightly to allow for this.	Thank you for comment. We are not able to answer because we are only answering comments about factual errors at this stage
SH	The National Society for Epilepsy (NSE)	2				Line 16 – expand to include whether eyes were deviated, whether eyelids were moving.	Thank you for comment. We are not able to answer because we are only answering comments about factual errors at this stage
SH	The National Society for Epilepsy (NSE)	3				Line 18 – could add in features around breathing: was the breath rapid, quiet, obstructed? Was there cyanosis or was breathing stertorous afterwards?	Thank you for comment. We are not able to answer because we are only answering comments about factual errors at this stage
SH	The National Society for Epilepsy (NSE)	4				Line 23 – could add in subsequent focal deficit in following event, such as limb weakness or difficulty thinking of words?	Thank you for comment. We are not able to answer because we are only answering comments about factual errors at this stage

PLEASE NOTE: Comments received in the course of consultations carried out by the Institute are published in the interests of openness and transparency, and to promote understanding of how recommendations are developed. The comments are published as a record of the submissions that the Institute has received, and are not endorsed by the Institute, its officers or advisory committees.
