NOTE: the abstractor's initials are contained in the abstract so unable to search for TB in the abstract field. The database kept crashing when tried to combine lines 1-11 so that's why combined with line 12 separately. Then the database kept crashing when tried to combine 13-23 so selected all of the items and exported each line separately, then used RefMan to limit by date. Downloaded 85 then 23 left in RefMan.
