

## Termination of Pregnancy

### [O] Support after termination of pregnancy

*NICE guideline <number>*

*Evidence reviews*

*April 2019*

*Draft for Consultation*

*These evidence reviews were developed  
by the National Guideline Alliance hosted  
by the Royal College of Obstetricians and  
Gynaecologists*

## **Disclaimer**

The recommendations in this guideline represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, professionals are expected to take this guideline fully into account, alongside the individual needs, preferences and values of their patients or service users. The recommendations in this guideline are not mandatory and the guideline does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and/or their carer or guardian.

Local commissioners and/or providers have a responsibility to enable the guideline to be applied when individual health professionals and their patients or service users wish to use it. They should do so in the context of local and national priorities for funding and developing services, and in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities. Nothing in this guideline should be interpreted in a way that would be inconsistent with compliance with those duties.

NICE guidelines cover health and care in England. Decisions on how they apply in other UK countries are made by ministers in the [Welsh Government](#), [Scottish Government](#), and [Northern Ireland Executive](#). All NICE guidance is subject to regular review and may be updated or withdrawn.

# 1 Support after termination of pregnancy

## 2 Review question

3 What support would women like after a termination of the pregnancy?

## 4 Introduction

5 The aim of this review is to determine what support women who have had a termination of  
6 pregnancy would like after the termination.

## 7 Summary of the protocol

8 See Table 1 for a summary of the population, perspective and outcome characteristics of this  
9 review.

10 **Table 1: Summary of the protocol**

<b>Population</b>	Women who have had a termination of pregnancy within the previous year
<b>Perspective</b>	Women who have had a termination of pregnancy
<b>Outcomes</b>	Any support regarded by women who have had a termination of pregnancy as useful/not useful or needed/not needed

11 For further details see full review protocol in appendix A.

## 12 Clinical evidence

### 13 Included studies

14 Only studies conducted from 2004 were considered for this review question, as this is when  
15 the first Royal College of Obstetricians and Gynaecologists (RCOG) guidance on termination  
16 of pregnancy was published and this was followed by substantial changes in practice.

17 Eleven qualitative studies were included in this review (Asplin 2014; Cano 2016; Carlsson  
18 2016; Chor 2016; Fisher 2015; Lafarge 2013; Lotto 2016; Maguire 2015; McCoyd 2007;  
19 McCoyd 2009; Mukkavaara 2012). Of these, 8 studies included women undergoing termination  
20 of pregnancy for fetal anomaly (Asplin 2014; Carlsson 2016; Fisher 2015; Lafarge 2013; Lotto  
21 2016; Maguire 2015; McCoyd 2007; McCoyd 2009) and 3 studies included women undergoing  
22 termination of pregnancy not for fetal anomaly (Cano 2016; Chor 2016; Mukkavaara 2012).

23 The included studies are summarised in Table 2.

24 See the literature search strategy in appendix B and study selection flow chart in appendix C.

### 25 Excluded studies

26 Studies not included in this review, with reasons for their exclusion, are provided in appendix  
27 K.

## 1 Summary of clinical studies included in the evidence review

2 A summary of the studies that were included in this review and the themes applied after  
3 thematic synthesis are presented in Table 2.

### 4 Table 2: Summary of included studies

Study and setting	Participants	Methods	Themes applied after thematic synthesis
<b>Women undergoing termination of pregnancy for fetal anomaly</b>			
Asplin 2014  Sweden	n=11  Pregnant women with a fetal anomaly	<b>Sampling:</b> Unclear methods from 4 major clinics in the Stockholm area  <b>Data collection:</b> Semi-structured interviews	<ul style="list-style-type: none"> <li>• Need for support:               <ul style="list-style-type: none"> <li>○ Isolation</li> <li>○ Negative feelings</li> <li>○ Specific questions</li> <li>○ Dealing with milestones and the future</li> </ul> </li> <li>• Access to support:               <ul style="list-style-type: none"> <li>○ Variation in whether follow-up is given</li> </ul> </li> <li>• Source of support:               <ul style="list-style-type: none"> <li>○ Psychological follow-up and counselling</li> <li>○ Support groups and women with similar experiences</li> <li>○ Welfare officers</li> </ul> </li> <li>• Lack of awareness of circumstances among health professionals encountered during follow-up care</li> </ul>
Carlsson 2016  Sweden	n=122  n=112 females; n=1 male; n=9 unknown  Women with both current and previous experience of a termination of pregnancy following a antenatal diagnosis of fetal anomaly	<b>Sampling:</b> Purposive sampling  <b>Data collection:</b> Threads and messages of a virtual community	<ul style="list-style-type: none"> <li>• Source of support:               <ul style="list-style-type: none"> <li>○ Support takes multiple forms</li> <li>○ Support groups and women with similar experiences</li> </ul> </li> </ul>
Fisher 2015  UK	n=351  (n=287 medical termination of pregnancy; n=64 surgical termination of pregnancy)  Women who have had a termination of pregnancy for a fetal anomaly	<b>Sampling:</b> Purposive sampling from Antenatal results and Choices (ARC) membership of women  <b>Data collection:</b> Cross-sectional, retrospective, online survey with open ended questions	<ul style="list-style-type: none"> <li>• Need for support               <ul style="list-style-type: none"> <li>○ Isolation</li> </ul> </li> <li>• Access to support               <ul style="list-style-type: none"> <li>○ Variation in whether follow-up is given</li> </ul> </li> <li>• Source of support               <ul style="list-style-type: none"> <li>○ Bereavement midwives</li> </ul> </li> </ul>

Study and setting	Participants	Methods	Themes applied after thematic synthesis
Lafarge 2013 UK	n=27  Women who have had a termination of pregnancy for a fetal anomaly	<b>Sampling:</b> Recruitment from a support group for parents who have had an anomaly detected during pregnancy via email and forum  <b>Data collection:</b> Online survey with open-ended questions	<ul style="list-style-type: none"> <li>• Need for support: <ul style="list-style-type: none"> <li>○ Isolation</li> </ul> </li> <li>• Access to support: <ul style="list-style-type: none"> <li>○ Variation in whether follow-up is given</li> <li>○ Availability over time</li> </ul> </li> <li>• Source of support: <ul style="list-style-type: none"> <li>○ Support takes multiple forms</li> <li>○ Psychological follow-up and counselling</li> <li>○ Support groups and women with similar experiences</li> <li>○ Friends and family</li> </ul> </li> <li>• Support should be specific to termination</li> </ul>
Lotto 2016 UK	n=18 (only views of n=10 women are of interest)  Women undergoing termination of pregnancy for severe congenital anomaly	<b>Sampling:</b> Purposeful sampling through fetal medicine clinic lists  <b>Data collection:</b> Semi-structured interviews	<ul style="list-style-type: none"> <li>• Access to support: <ul style="list-style-type: none"> <li>○ Stigma impacts disclosure and access</li> </ul> </li> </ul>
Maguire 2015 USA	n=13  Women undergoing second trimester termination for fetal anomaly	<b>Sampling:</b> Women were recruited from 4 sites; 2 that provided surgical terminations for fetal anomaly and 2 that provided medical termination (induction); strategy not reported  <b>Data collection:</b> Semi-structured interviews	<ul style="list-style-type: none"> <li>• Need for support: <ul style="list-style-type: none"> <li>○ Isolation</li> </ul> </li> <li>• Support should be specific to termination</li> </ul>
McCoyd 2007 USA	n=30  Women who had a termination of pregnancy due to fetal anomaly in the previous year	<b>Sampling:</b> Women were recruited through obstetricians and perinatologists and a website devoted to women who had a termination for fetal anomaly.  <b>Data collection:</b> Interviews; structure not reported	<ul style="list-style-type: none"> <li>• Need for support: <ul style="list-style-type: none"> <li>○ Validation of feelings</li> </ul> </li> <li>• Access to support: <ul style="list-style-type: none"> <li>○ Availability over time</li> <li>○ Stigma impacts disclosure and access</li> </ul> </li> <li>• Source of support: <ul style="list-style-type: none"> <li>○ Friends and family</li> </ul> </li> <li>• Support should be specific to termination</li> </ul>
McCoyd 2009 USA	n=30  Inclusion criteria not reported	<b>Sampling:</b> Purposive sampling was used to recruit women from perinatology offices and a listserv dedicated to women who had a termination of pregnancy for fetal anomaly  <b>Data collection:</b> Semi-structured interviews	<ul style="list-style-type: none"> <li>• Need for support: <ul style="list-style-type: none"> <li>○ Validation of feelings</li> </ul> </li> <li>• Source of support: <ul style="list-style-type: none"> <li>○ Support groups and women with similar experiences</li> </ul> </li> <li>• Support should be specific to termination</li> </ul>

Study and setting	Participants	Methods	Themes applied after thematic synthesis
<b>Women undergoing termination of pregnancy not for fetal anomaly</b>			
Cano 2016 Canada	n=16 Women ≥18 years of age; termination of pregnancy performed after 2005; resident of the Yukon Territory at the time of termination of pregnancy	<b>Sampling:</b> Multi-model recruitment strategy, posting study advertisements on list servers and online platforms, circulating study information through local organisations and engaging with both traditional and social media  <b>Data collection:</b> Semi-structured interviews	<ul style="list-style-type: none"> <li>• Source of support: <ul style="list-style-type: none"> <li>○ Psychological follow-up and counselling</li> </ul> </li> </ul>
Chor 2016 USA	n=30 Women ≥18 years of age requesting termination up to 13 <sup>+6</sup> weeks gestation	<b>Sampling:</b> Purposive sampling  <b>Data collection:</b> Semi-structured interviews	<ul style="list-style-type: none"> <li>• Source of support: <ul style="list-style-type: none"> <li>○ Doulas</li> </ul> </li> </ul>
Mukkavaara 2012 Mexico City	n=6 Women undergoing termination of pregnancy in the second trimester	<b>Sampling:</b> Purposive sampling visiting the gynaecological department for a termination of pregnancy in 2 hospitals  <b>Data collection:</b> Semi-structured interviews	<ul style="list-style-type: none"> <li>• Need for support: <ul style="list-style-type: none"> <li>○ Negative feelings</li> </ul> </li> <li>• Access to support: <ul style="list-style-type: none"> <li>○ Variation in whether follow-up is given</li> </ul> </li> <li>• Source of support: <ul style="list-style-type: none"> <li>○ Support groups and women with similar experiences</li> </ul> </li> </ul>

1 *ARC: Antenatal Results and Choices*

2 See the full evidence tables in appendix D for clinical evidence tables for original themes  
3 applied by study authors, relevant quotes, and the themes applied after thematic synthesis.  
4 No meta-analysis was undertaken for this review so there are no forest plots in appendix E.

## 5 **Quality assessment of clinical studies included in the evidence review**

6 See the clinical evidence profiles in appendix F.

## 7 **Economic evidence**

### 8 **Included studies**

9 A systematic review of the economic literature was conducted but no economic studies were  
10 identified which were applicable to this review question.

11 A single economic search was undertaken for all topics included in the scope of this  
12 guideline. Please see supplementary material 2 for details.

### 13 **Excluded studies**

14 No full-text copies of articles were requested for this review and so there is no excluded  
15 studies list.

## 1 **Economic model**

2 No economic modelling was undertaken for this review because the committee agreed that  
3 other topics were higher priorities for economic evaluation.

## 4 **Evidence statements**

### 5 **Theme 1: Need for support**

#### 6 ***Subtheme 1.1: Isolation – fetal anomaly***

7 Low quality evidence from 5 studies (n=442) conducted in Sweden, the UK and the USA  
8 reported that women felt isolated following a termination of pregnancy for fetal anomaly and  
9 that support received helped alleviate this.

#### 10 ***Subtheme 1.2: Negative feelings – fetal anomaly and not for fetal anomaly***

11 Very low quality evidence from 2 studies (n=17) conducted in Sweden reported that women  
12 needed help with their negative feelings following a termination of pregnancy.

#### 13 ***Subtheme 1.3: Validation of feelings – fetal anomaly***

14 Very low quality evidence from 2 studies (n=60) conducted in the USA reported that women  
15 wanted someone to validate the way they were feeling following a termination of pregnancy  
16 for fetal anomaly, rather than try to make them feel better, and that it was helpful to know  
17 their feelings were normal and experienced by other women in a similar situation.

#### 18 ***Subtheme 1.4: Specific questions – fetal anomaly***

19 Very low quality evidence from 1 study (n=11) conducted in Sweden reported that women felt  
20 despair after a termination of pregnancy for fetal anomaly and needed a way of reaching  
21 someone with their specific questions.

#### 22 ***Subtheme 1.5: Dealing with milestones and the future – fetal anomaly***

23 Very low quality evidence from 1 study (n=11) conducted in Sweden reported that women  
24 were unable to work and lacked energy and motivation following a termination of pregnancy  
25 for fetal anomaly and wanted help with how to think about the future and reaching  
26 milestones.

### 27 **Theme 2: Access to support**

#### 28 ***Subtheme 2.1: Variation in whether follow-up is given – fetal anomaly and not for fetal 29 anomaly***

30 Low quality evidence from 4 studies (n=405) conducted in Sweden and the UK reported that  
31 support following a termination of pregnancy is important but that it is limited and many  
32 women do not end up with follow-up support. Women reported that whether or not follow-up  
33 is received is often down to the women herself and the healthcare professionals they  
34 encounter rather than on established routines, and those who declined follow-up later  
35 regretted it.

#### 36 ***Subtheme 2.2: Availability over time – fetal anomaly***

37 Low quality evidence from 3 studies (n=87) conducted in the UK and the USA reported that  
38 the availability of support decreases over time after a termination for fetal anomaly, despite  
39 the desire for ongoing support, and that grief lasts longer than expected by the woman.

1 ***Subtheme 2.3: Stigma impacts disclosure and access – fetal anomaly***

2 Very low quality support from 2 studies (n=40) conducted in the UK and the USA reported  
3 that the stigma surrounding termination may prevent women for disclosing their experience  
4 and seeking support from friends and family due to fear of negative reactions, increasing  
5 isolation.

6 **Theme 3: Source of support**

7 ***Subtheme 3.1: Support takes multiple forms – fetal anomaly***

8 Low quality evidence from 2 studies (n=149) conducted in Sweden and the UK reported that  
9 women utilised multiple forms of support to cope following a termination of pregnancy for  
10 fetal anomaly and to come to terms with the decision they made.

11 ***Subtheme 3.2: Psychological follow-up and counselling – fetal anomaly and not for***  
12 ***fetal anomaly***

13 Low quality evidence from 3 studies (n=54) conducted in Canada, Sweden and the UK  
14 reported that women felt some form of counselling or psychological support should be  
15 standard following a termination of pregnancy and that it was not feasible for women to fund  
16 their own psychological support following a termination of pregnancy. The timing of  
17 counselling was also considered an important factor as some women felt vulnerable as they  
18 had started the process too early.

19 ***Subtheme 3.3: Support groups and women with similar experiences – fetal anomaly***  
20 ***and not for fetal anomaly***

21 Low quality evidence from 5 studies (n=196) conducted in Sweden, the UK and the USA  
22 reported that women valued being part of support groups and sharing their thoughts and  
23 feelings with women who had similar experiences and that being part of a support group was  
24 the most beneficial form of support for women and that they did not think they would have  
25 coped without this support. However, some women reported that being part of a support  
26 group made them feel worse or that their grief was inadequate.

27 ***Subtheme 3.4: Friends and family – fetal anomaly***

28 Very low quality evidence from 2 studies (n=57) conducted in the UK and the USA reported  
29 that support received from friends and family following a termination of pregnancy for fetal  
30 anomaly was of variable quality and often failed to provide comfort.

31 ***Subtheme 3.5: Welfare officers – fetal anomaly***

32 Very low quality evidence from 1 study (n=11) conducted in Sweden reported that contact  
33 with a welfare officer was appreciated as temporary support for a specific event following a  
34 termination of pregnancy for fetal anomaly.

35 ***Subtheme 3.6: Social workers – fetal anomaly***

36 Very low quality evidence from 1 study (n=30) conducted in the USA reported that written  
37 information from social workers was useful following a termination of pregnancy for fetal  
38 anomaly, but social work services were not effective if there was insufficient contact to build  
39 rapport.

40 ***Subtheme 3.7: Genetic counsellors – fetal anomaly***

41 Very low quality evidence from 1 study (n=30) conducted in the USA reported that a follow-  
42 up call from genetic counsellors was appreciated following a termination of pregnancy and  
43 that, for many women, this was the time point where they realised they needed additional  
44 help.

1 **Subtheme 3.8: Bereavement midwives – fetal anomaly**

2 Low quality evidence from 1 study (n=361) conducted in the UK reported that women felt  
3 follow-up care after a termination of pregnancy for fetal anomaly from the bereavement  
4 midwife was excellent, when available.

5 **Subtheme 3.9: Doulas – not for fetal anomaly**

6 Very low quality evidence from 1 study (n=30) conducted in the USA reported that some  
7 women were interested in having post-termination discussions with doulas (that had been  
8 involved in the termination process) as an opportunity to explore specific health-related  
9 topics, discuss psychosocial concerns and receive emotional support, and that a doula would  
10 be their first choice as they thought they were more emotionally attached than a counsellor  
11 would be. However, some women were not interested in post-termination support from a  
12 doula as they felt doulas lacked medical expertise or they wanted to move on.

13 **Theme 4: Support should be specific to termination – fetal anomaly**

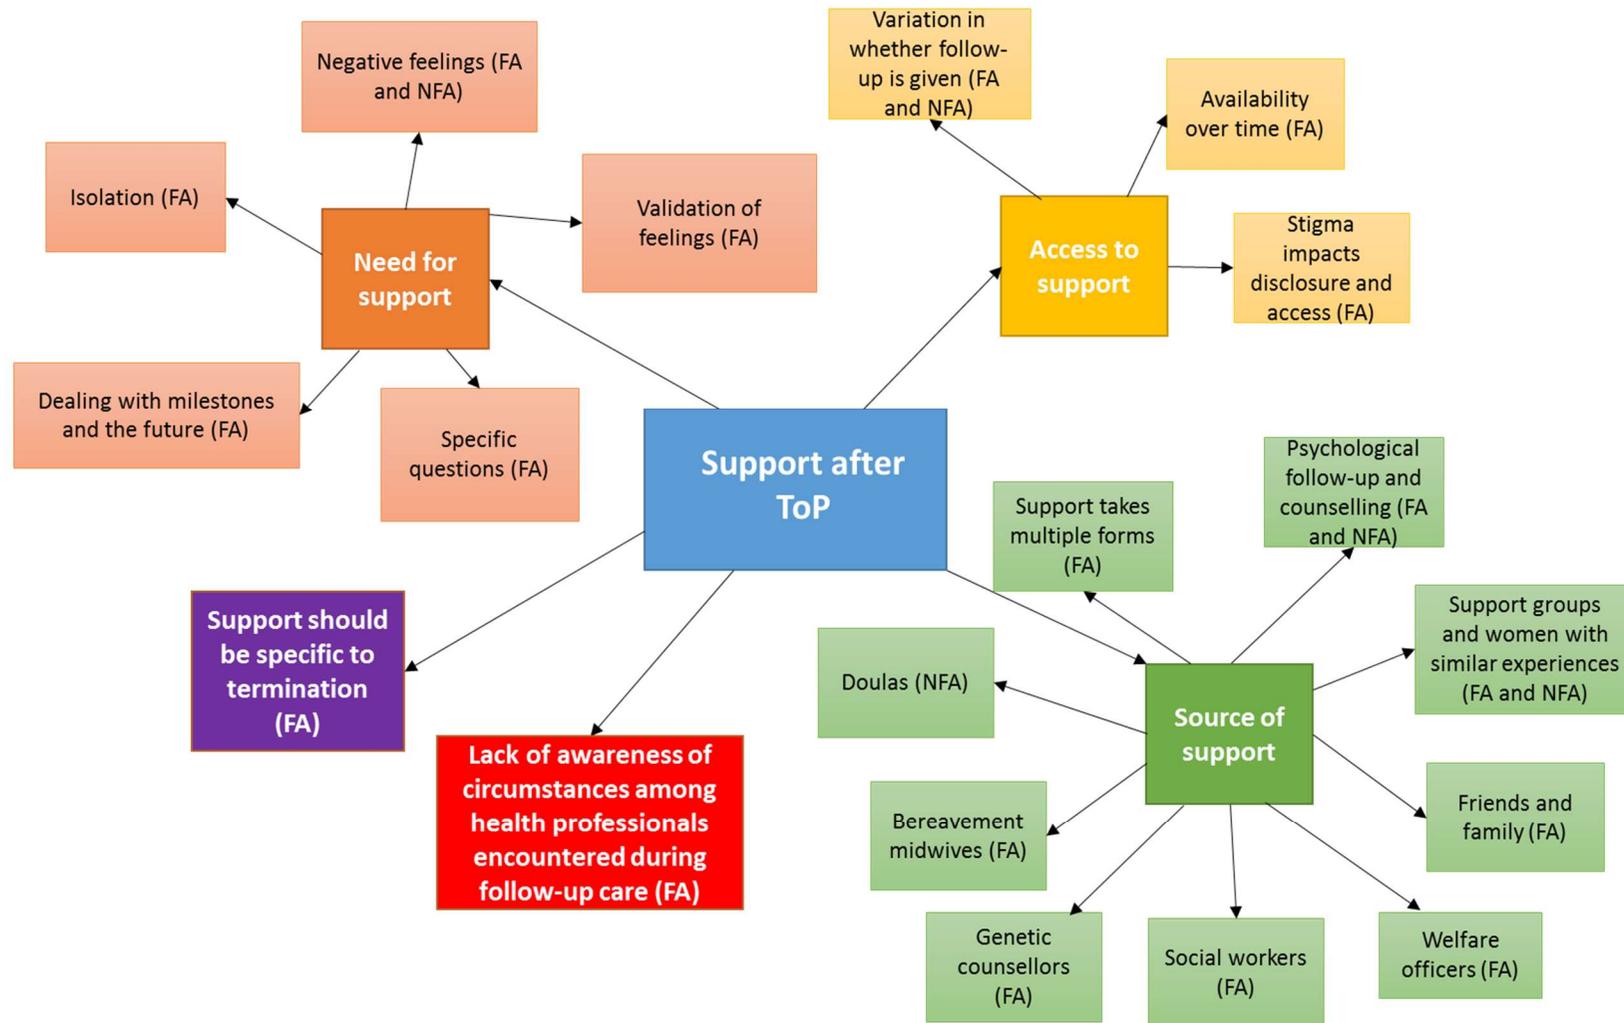

14 Low quality evidence from 4 studies (n=100) conducted in the UK and the USA reported that  
15 women felt uncomfortable attending support groups that were not specific to their situation or  
16 that support was inadequate if not tailored to their situation. Additionally, women felt  
17 undeserving of support if they had not told people the complete story.

18 **Theme 5: Lack of awareness of circumstances among health professionals**  
19 **encountered during follow-up care – fetal anomaly**

20 Very low quality evidence from 1 study (n=11) conducted in Sweden reported that women  
21 found it disappointing when healthcare professionals encountered during follow-up care were  
22 not aware of what the woman had been through.

23 See Appendix M for all relevant quotes related to each theme applied after thematic  
24 synthesis.

1 **Figure 1: Thematic map – Support after termination of pregnancy (FA: Fetal anomaly; NFA: Not for fetal anomaly)**

2

1 **The committee's discussion of the evidence**

2 **Interpreting the evidence**

3 ***The outcomes that matter most***

4 The aim of this review question was to determine what support women would like after a  
5 termination of pregnancy; therefore a woman-centred approach was taken and the views of  
6 women who had a termination of pregnancy were considered the most important for this  
7 question. The committee did not pre-specify any types of support as they did not want to  
8 constrain the evidence that was considered for this question. Therefore, any support  
9 regarded by women who have had a termination of pregnancy as useful or not useful or  
10 needed or not needed was included.

11 The views of staff working in termination of pregnancy services were not considered for this  
12 question as the committee agreed that the support staff think women should receive after a  
13 termination of pregnancy may differ for the support that women would actually like to receive.

14 ***The quality of the evidence***

15 The quality of evidence was assessed using the GRADE CERQual methodology. Evidence  
16 for themes 1 (need for support), 2 (access to support) and 3 (source of support) ranged from  
17 very low to low quality. All of the subthemes within these themes were downgraded due to  
18 concerns with the methodological quality of the data and a number of subthemes were also  
19 downgraded due to the relevance and adequacy of the data. Evidence for theme 4 (support  
20 should be specific to termination) was of low quality and downgraded due to Serious  
21 concerns with the methodological quality of the data. The evidence for theme 5 (lack of  
22 awareness of circumstances among health professionals encountered during follow-up care)  
23 was very low quality and downgraded due to concerns with the methodological quality,  
24 relevance, and adequacy of the data.

25 ***Benefits and harms***

26 There was evidence that whether or not women received follow-up, including aftercare and  
27 support, was variable and was not based on established routines. There was limited  
28 information available for this subtheme, but the committee agreed based on their experience  
29 that, whilst information about aftercare should constitute good clinical practice, whether and  
30 how much information is provided is very variable in practice. Therefore, the committee  
31 recommended that women are provided with information about what to expect regarding  
32 follow-up and aftercare and, more specifically in relation to aftercare, information about what  
33 to do if they experience any complications and how to seek care out of hours. There was  
34 evidence that women may need support following termination of pregnancy for a number of  
35 reasons, including: dealing with isolation, negative feelings, milestones and the future, and to  
36 receive answers to specific questions and have someone validate their feelings. The  
37 committee did not think it was appropriate to specify in detail how women may feel following  
38 a termination as it may cause women to feel worse in anticipation of such feelings or to feel  
39 that their grief is inadequate, which emerged as a theme from the evidence related to support  
40 groups. Therefore, the committee agreed that women should be told that it is common to  
41 experience a range of emotions following a termination of pregnancy, but what and how  
42 much information is provided should be at the discretion of the clinician.

43 There was evidence that women seek support from multiple sources, including family and  
44 friends, support groups and women with similar experiences, and psychological support and  
45 counselling; therefore, the committee agreed that women should be advised how to seek  
46 support from these sources. There was evidence that support from family and friends may  
47 fail to provide comfort; however, this was based on very low quality evidence and the  
48 committee agreed that support from friends and family may be beneficial for some women.

1 The committee also noted that support groups should be specific and relevant to women who  
2 have had a termination of pregnancy due to evidence that women felt support can be  
3 inadequate if not specific to their circumstances, such as support groups for women who  
4 have lost a child, and that women felt underserving of support received if others were not  
5 aware of the situation.

6 There was evidence that the stigma associated with termination of pregnancy impacts  
7 disclosure which impacts women accessing support. Therefore, the committee agreed that it  
8 is important that emotional support, and access to counselling if required, is available from  
9 termination of pregnancy providers as this would not require additional disclosure by the  
10 women in order to access support. The committee agreed that women should be advised  
11 that counselling is available and referred onto counselling if the woman wants it. They also  
12 agreed that there is no threshold to accessing the emotional support service and that there is  
13 no time limit on when support can be accessed following a termination as there as evidence  
14 that grief may last longer than expected by women but the availability of support was  
15 perceived to decline over time. However, the committee did not think it was appropriate to  
16 offer counselling as standard, despite this arising as a theme in the qualitative evidence, as  
17 some women do not feel they need support and may actually feel relieved after a termination  
18 of pregnancy and want to move on. The committee noted that difficulties experienced by  
19 some women may require more intensive psychological therapy, which is often not available  
20 from termination of pregnancy services and that there can be difficulties providing referrals  
21 for these women; however, recommending pathways for referral was beyond the scope of  
22 this question.

23 The majority of the evidence for this review came from women who were having a  
24 termination of pregnancy for fetal anomaly. The committee agreed that the recommendations  
25 were relevant to all women seeking a termination of pregnancy but there were additional  
26 factors that need considering when women are having a termination for fetal anomaly. For  
27 example, when discussing feelings women may experience following a termination, clinicians  
28 may want to discuss the grieving process following a termination for fetal anomaly,  
29 particularly as it is more likely in this group that the pregnancy was originally intended. The  
30 committee agreed this should be done at the clinicians' discretion to avoid being prescriptive  
31 about how women should feel, and therefore did not make recommendations in this area.  
32 Similarly, this population may require additional support regarding disclosing the end of the  
33 pregnancy to friends and family, which emerged as a theme from the information needs  
34 review, and accessing specialist support groups; however, there was insufficient evidence to  
35 inform recommendations on how this support should be provided. There was also evidence  
36 that follow-up from genetic counsellors and bereavement midwives may be beneficial for  
37 women having a termination of pregnancy for fetal anomaly but the committee agreed that  
38 the evidence was not strong enough to make recommendations about these roles due to  
39 concerns with the methodological quality and adequacy of the data.

40 There was evidence that women were disappointed when healthcare professionals  
41 encountered during follow-up care were not aware of what the woman had been through.  
42 The committee did not think it was appropriate to recommend that the termination of  
43 pregnancy is disclosed to all healthcare professionals that may be encountered during follow-  
44 up care due to concerns with privacy and confidentiality that arose during the review of  
45 access to termination of pregnancy services.

46 Finally, there was evidence that some women benefitted from support provided by welfare  
47 officers and doulas but the committee did not make recommendations about these  
48 professions as the evidence was very low quality and they were not considered relevant to  
49 termination of pregnancy practice in the UK. There was also very low quality evidence  
50 pertaining to social workers, but whilst information from this group could be useful, women  
51 felt they was insufficient time to build rapport so services were ineffective; therefore, the  
52 committee agreed there was not sufficient evidence to recommend the involvement of social  
53 workers.

1 As there was sufficient evidence to inform the recommendations, the committee decided to  
2 prioritise other areas addressed by the guideline for future research and therefore made no  
3 research recommendations regarding support after termination of pregnancy.

4 **Cost effectiveness and resource use**

5 A systematic review of the economic literature was conducted but no relevant studies were  
6 identified which were applicable to this review question.

7 The committee discussed the potential costs and savings of recommendations and thought  
8 that, overall, there would not be a significant increase in costs or resources associated with  
9 these recommendations as many of the sources of support are already available and are  
10 provided outside of the NHS. There may be an increase in costs and resources for specific  
11 trusts if they do not currently provide emotional support after a termination but, in the  
12 committee's experience, many trusts already offer this and have arrangements in place for  
13 referring women to counselling services, if required.

# 1 Appendices

## 2 Appendix A – Review protocols

### 3 Review protocol for review question: What support would women like 4 after a termination of the pregnancy?

Field (based on PRISMA-P)	Content
Review question in SCOPE	What support should women be offered after a termination of pregnancy?
Review question in guideline	What support would women like after a termination of the pregnancy?
Type of review question	Qualitative
Objective of the review	To determine what support women who have had a termination of pregnancy would like
Eligibility criteria – population	Women who have had a termination of pregnancy within the previous year  Exclusions: - Studies with indirect populations will not be considered
Eligibility criteria – perspective	Women who have had a termination of pregnancy  Exclusions: - The views of staff working in termination of pregnancy services will not be considered
Eligibility criteria – comparator(s)	N/A
Outcomes – areas of interest	Any support regarded by women who have had a termination of pregnancy as useful/not useful or needed/not needed
Eligibility criteria – study design	- Systematic reviews of qualitative studies - Qualitative studies - Other study designs that report qualitative evidence (e.g., surveys with open-ended questions)
Other inclusion exclusion criteria	Inclusion: - English-language - Studies from OECD countries
Proposed sensitivity/subgroup analysis, or meta-regression	Formal subgroup analyses are not appropriate for this question due to qualitative data but views of women from the following groups will be considered separately, where possible:  - Women having a termination of pregnancy for fetal anomaly - Complex pre-existing medical conditions - No complex pre-existing medical conditions
Selection process – duplicate screening/selection/analysis	Dual sifting will be undertaken for this question using NGA STAR software, with resolution of discrepancies in discussion with the senior reviewer if necessary.

Field (based on <u>PRISMA-P</u> )	Content
	<p>Sifting, data extraction, appraisal of methodological quality and GRADE-CERQual assessment will be performed by the systematic reviewer.</p> <p>Quality control will be performed by the senior systematic reviewer.</p> <p>Dual data extraction will not be performed for this question.</p>
Data management (software)	NGA STAR software will be used for study sifting, data extraction, recording quality assessment using checklists and generating bibliographies/citations
Information sources – databases and dates	<p>Sources to be searched: Medline, Medline In-Process, CCTR, CDSR, DARE, HTA, Embase, plus AMED, Psycinfo, Cinahl and Web of Science. Additional databases may also be considered.</p> <p>Limits (e.g. date, study design):</p> <p>Apply standard animal/non-English language exclusion</p> <p>Dates: from 2004</p> <p>Studies conducted from 2004 will be considered for this review question, this is when the first RCOG guidance on termination of pregnancy was published which was followed by substantial changes in practice.</p>
Identify if an update	Not an update
Author contacts	For details please see the guideline in development web site.
Highlight if amendment to previous protocol	For details please see section 4.5 of <a href="#">Developing NICE guidelines: the manual</a>
Search strategy – for one database	For details please see appendix B
Data collection process – forms/duplicate	A standardised evidence table format will be used, and published as appendix D (clinical evidence tables) or appendix H (economic evidence tables).
Data items – define all variables to be collected	For details please see evidence tables in appendix D (clinical evidence tables) or appendix H (economic evidence tables).
Methods for assessing bias at outcome/study level	<p>Standard study checklists will be used to critically appraise individual studies. For details please see section 6.2 of <a href="#">Developing NICE guidelines: the manual</a></p> <p>The risk of bias across all available evidence will be evaluated for each outcome using an adaptation of the ‘Grading of Recommendations Assessment, Development and Evaluation (GRADE) toolbox’ developed by the international GRADE working group <a href="http://www.gradeworkinggroup.org/">http://www.gradeworkinggroup.org/</a></p>
Criteria for quantitative synthesis (where suitable)	N/A
Methods for analysis – combining studies and exploring (in)consistency	<p>Appraisal of methodological quality:</p> <p>The methodological quality of each study will be assessed using an appropriate checklist:</p> <ul style="list-style-type: none"> <li>• GRADE-CERQual for qualitative studies</li> </ul> <p>Synthesis of data:</p> <p>Synthesis consisting of extraction of common themes/thematic analysis will be conducted where appropriate using CERQual, Excel and Word.</p>

Field (based on PRISMA-P)	Content
Meta-bias assessment – publication bias, selective reporting bias	For details please see section 6.2 of Developing NICE guidelines: the manual.
Assessment of confidence in cumulative evidence	For details please see sections 6.4 and 9.1 of <a href="#">Developing NICE guidelines: the manual</a>
Rationale/context – Current management	For details please see the introduction to the evidence review.
Describe contributions of authors and guarantor	<p>A multidisciplinary committee developed the guideline. The committee was convened by the National Guideline Alliance and chaired by Professor Iain Cameron in line with section 3 of <a href="#">Developing NICE guidelines: the manual</a>.</p> <p>Staff from the National Guideline Alliance will undertake systematic literature searches, appraise the evidence, and cost-effectiveness analysis where appropriate, and draft the guideline in collaboration with the committee. For details please see the methods chapter.</p>
Sources of funding/support	The National Guideline Alliance is funded by NICE and hosted by the RCOG
Name of sponsor	The National Guideline Alliance is funded by NICE and hosted by the RCOG
Roles of sponsor	NICE funds the National Guideline Alliance to develop guidelines for those working in the NHS, public health, and social care in England
PROSPERO registration number	Not registered

1 CERQual: Confidence in the Evidence from Reviews of Qualitative research; GRADE: Grading of  
2 Recommendations Assessment, Development and Evaluation; N/A: not applicable; NHS: National  
3 Health Service; NICE: National Institute for Health and Care Excellence; NGA: National Guideline  
4 Alliance; OECD: Organisation for Economic Co-operation and Development; RCOG: Royal College of  
5 Obstetricians and Gynaecologists

## Appendix B – Literature search strategies

### Literature search strategy for review question: What support would women who have requested a termination of pregnancy like?

The search for this topic was last run on 5<sup>th</sup> April 2018. It was decided not to undertake a re-run for this topic in November 2018 as any additional qualitative evidence identified would be unlikely to change the recommendations.

#### Database: Medline & Embase (Multifile)

Last searched on **Embase Classic+Embase** 1947 to 2018 April 04, **Ovid MEDLINE(R) Epub Ahead of Print, In-Process & Other Non-Indexed Citations, Ovid MEDLINE(R) Daily and Ovid MEDLINE(R)** 1946 to Present

Was the data collected in a way that addressed the research issue? Can't tell, saturation of data not</li> </ol>

Study details	Participants	Methods	Themes ( <i>information in italics is theme(s) applied after thematic synthesis</i> )	Comments
<p>malformation perceive as being important in their encounters with caregivers for promoting their healthy adjustment and well-being</p> <p><b>Study dates</b> May 2008 to February 2010</p> <p><b>Source of funding</b> Goijes foundation. The Swedish society of nursing and the visually impaired association "child lyckopenning"</p>		<p>specialised in ultrasound examination.</p> <p><b>Data collection</b> The first author, a registered midwife who has worked for several years as an ultrasonographer and is educated in interview techniques, conducted the interview. She did not contribute to the care of the recruited women. The informants chose the time and setting for their interview. A semi-structured interview guide ensured the same basic questions were used in all interviews. The women were first asked to describe their experience in receiving the information about the results about care, treatment and support. The informants were then invited to supplement the information with anything else they wanted to share. All the interviews were audio taped and transcribed verbatim by the first author.</p> <p><b>Data analysis</b> Qualitative content analysis was chosen to gain a deeper understanding compared to only descriptive analysis. The analysis was performed in 6 steps: 1) the first author listened to and read</p>	<p>both parents having a conversation with the caregivers and that it had not been presented as an option: 'It has been blocked. I wish there had been a direction about the significance of having a dialogue, provided from the care providers' point of view. I have been lonely; my husband did not want to go to someone to talk about the experience and I did not want to go without him. The standpoint should be that you were offered a standard follow-up with some sort of psychological support' IP3" page 622 (<i>Source of support: psychological follow-up and counselling</i>)</p> <ul style="list-style-type: none"> <li>• "Most of the women felt it was too easy to end up without any follow-up. How the treatment and care were given depended, to a great extent, on the woman herself or on the health care professionals they meet, rather than on established routines" page 623 (<i>Access to support:</i></li> </ul>	<p>discussed by authors</p> <p>6. Has the relationship between researcher and participants been adequately considered? Yes</p> <p>7. Have ethical issues been taken into consideration? Yes</p> <p>8. Was the data analysis sufficiently rigorous? Yes</p> <p>9. Is there a clear statement of findings? Yes</p> <p>10. How valuable is the research? Researchers discuss the contribution the study makes to existing literature</p> <p><b>Other information</b> The design and small sample size suggest that the results should be interpreted with caution. Thus, data was collected from 4 fetal referral centres which may increase the generalizability of the study to smaller units.</p>

Study details	Participants	Methods	Themes ( <i>information in italics is theme(s) applied after thematic synthesis</i> )	Comments
		<p>reviewed using a code book of a priori codes and categories based on the interview guide, study objectives and findings from the larger study. In the second phase, inductive analytic techniques were employed, adding additional codes and categories based on the data. In the third phase, themes, and relationships between these themes and categories and codes were identified. In the fourth phase, identified patterns and themes were formed for coherence, both within and between interviews. The MSc student was the primary coder and their supervisor reviewed both the evolving codebook and coded transcripts. Group meetings, as well as discussions with the larger CAS team, guided interpretation and resolved disagreements through discussion.</p>		<p><b>Other information</b> None</p>

		<p>The text from the interviews was analysed using qualitative content analysis and presented in categories with illuminating quotes. The objective of content analysis was to provide knowledge and understanding of the phenomena. The transcriptions were read to gain a sense of the whole and text units that answered the aim of the study were identified and extracted. Text units were then condensed and given a code based on differences and similarities in content. Text units were sorted into 75 categories and were then subsumed in several steps into 11 subcategories and 4 categories. When the final categories were determined, text units were checked, discussed, and reflected on the values for appropriateness of their categorisation.</p>

**Table 3: Clinical evidence profile: Theme 1. Need for support**

Study information		Description of theme or finding	CERQual assessment of the evidence		
Number of studies	Design		Criteria	Level of concern	Overall quality
<b>Sub-theme 1.1: Need for support - isolation</b>					
5 (Asplin 2014; Fisher 2015; Lafarge 2013; Maguire 2015; McCoyd 2009)  n=442	5 qualitative studies (3 using semi-structured interviews; 2 using online surveys)	<b>Fetal anomaly:</b>  2 studies conducted in Sweden and the UK reported that women felt isolated following termination of pregnancy for fetal anomaly.  3 studies conducted in the UK and the USA reported that support received helped alleviate isolation.	Methodological limitations	Serious concerns <sup>1</sup>	Low
			Relevance	None or very minor concerns	
			Coherence	None or very minor concerns	
			Adequacy	None or very minor concerns	
<b>Sub-theme 1.2: Need for support – negative feelings</b>					
2 (Asplin 2014; Mukkavaara 2012)  n=17	2 qualitative studies using semi-structured interviews	<b>Fetal anomaly and not for fetal anomaly:</b>  2 studies conducted in Sweden reported that women needed help with their negative feelings following a termination of pregnancy.	Methodological limitations	Moderate concerns <sup>2</sup>	Very low
			Relevance	Moderate concerns <sup>3</sup>	
			Coherence	None or very minor concerns	
			Adequacy	Serious concerns <sup>4</sup>	
<b>Sub-theme 1.3: Need for support – validation of feelings</b>					
2 (McCoyd 2007; McCoyd 2009)  n=60	2 qualitative studies using semi-structured interviews	<b>Fetal anomaly:</b>  1 study conducted in the USA reported that women wanted someone to validate the way they were feeling rather than try to make them feel better following a termination of pregnancy for fetal anomaly.	Methodological limitations	Moderate concerns <sup>2</sup>	Very low
			Relevance	Moderate concerns <sup>3</sup>	
			Coherence	None or very minor concerns	

Study information		Description of theme or finding	CERQual assessment of the evidence		
Number of studies	Design		Criteria	Level of concern	Overall quality
		1 study conducted in the USA reported that women found it helpful to know that their feelings were normal and experienced by other women in a similar situation.	Adequacy	Moderate concerns <sup>4</sup>	
<b>Sub-theme 1.4: Need for support – specific questions</b>					
1 (Asplin 2014) n=11	1 qualitative study using semi-structured interviews	<b>Fetal anomaly:</b> 1 study conducted in Sweden reported that women felt despair after a termination of pregnancy for fetal anomaly and needed a way of reaching someone with their specific questions.	Methodological limitations	Moderate concerns <sup>5</sup>	Very low
			Relevance	Moderate concerns <sup>3</sup>	
			Coherence	None or very minor concerns	
			Adequacy	Serious concerns <sup>6</sup>	
<b>Sub-theme 1.5: Need for support – dealing with milestones and the future</b>					
1 (Asplin 2014) n=11	1 qualitative study using semi-structured interviews	<b>Fetal anomaly:</b> 1 study conducted in Sweden reported that women were unable to work, and lacked energy and motivation, and wanted help with how to think about the future and reaching milestones.	Methodological limitations	Moderate concerns <sup>5</sup>	Very low
			Relevance	Moderate concerns <sup>3</sup>	
			Coherence	None or very minor concerns	
			Adequacy	Serious concerns <sup>7</sup>	

<sup>1</sup>There were serious concerns with the methodological quality of the data as the qualitative data for 2 studies, including the largest study, came from open-ended questions in an online survey as opposed to interviews and insufficient information was provided about data analysis in 2 of the studies

<sup>2</sup>There were moderate concerns with the methodological quality of the data as there was insufficient information provided in both studies regarding data collection and in 1 study regarding data analysis

<sup>3</sup>There were moderate concerns with the relevance of the data as none of the studies were conducted in the UK; however, it is likely this theme would also apply to the UK setting

<sup>4</sup>There were serious concerns with the adequacy of the data as only 2 small studies reported this theme and limited information was provided about the negative feelings experienced

<sup>5</sup>There were moderate concerns with the methodological quality of the study as insufficient information was reported regarding recruitment and data collection

<sup>6</sup>There were serious concerns with the adequacy of the data as only 1 small study reported this theme and there was limited information reported

<sup>7</sup>There were serious concerns with the adequacy of the data as only 1 small study reported this theme

**Table 4: Clinical evidence profile: Theme 2. Access to support**

Study information		Description of theme or finding	CERQual assessment of the evidence		
Number of studies	Design		Criteria	Level of concern	Overall quality
<b>Sub-theme 2.1: Access to support – variation in whether follow-up is given</b>					
4 (Asplin 2014; Fisher 2015; Lafarge 2013; Mukkavaara 2012)  n=405	4 qualitative studies (2 using semi-structured interviews; 2 using online surveys)	<p><b>Fetal anomaly:</b></p> <p>3 studies conducted in Sweden and the UK reported that support following termination for fetal anomaly is important but that it is limited and many women do not end up with follow-up support.</p> <p>1 study conducted in Sweden reported that whether or not a women received follow-up is often down to the women herself and the health professionals they encounter rather than on established routines.</p> <p><b>Not for fetal anomaly:</b></p> <p>1 study conducted in Sweden reported that women who declined follow-up after a termination later regretted it.</p>	Methodological limitations	Serious concerns <sup>1</sup>	Low
			Relevance	None or very minor concerns	
			Coherence	None or very minor concerns	
			Adequacy	None or very minor concerns	
<b>Sub-theme 2.2: Access to support – availability over time</b>					
3 (Lafarge 2013; McCoyd 2007; McCoyd 2009)  n=87	3 qualitative studies (2 using semi-structured interviews; 1 using online survey)	<p><b>Fetal anomaly:</b></p> <p>2 studies conducted in the UK and the USA reported that the availability of support decreases over time, despite the desire for ongoing support.</p> <p>1 study conducted in the USA reported that grief lasts longer than expected by the woman.</p>	Methodological limitations	Serious concerns <sup>2</sup>	Low
			Relevance	None or very minor concerns	
			Coherence	None or very minor concerns	
			Adequacy	None or very minor concerns	
<b>Sub-theme 2.3: Access to support - stigma impacts disclosure and access</b>					
2 (Lotto 2016; McCoyd 2007)  n=40	2 qualitative studies using semi-structured interviews	<p><b>Fetal anomaly:</b></p> <p>2 studies conducted in the UK and the USA reported that the stigma surrounding termination may prevent women for disclosing their experience and seeking support from friends and family due to fear of negative reactions, increasing isolation.</p>	Methodological limitations	Serious concerns <sup>3</sup>	Very low
			Relevance	None or very minor concerns	
			Coherence	None or very minor concerns	

Study information		Description of theme or finding	CERQual assessment of the evidence		
Number of studies	Design		Criteria	Level of concern	Overall quality
			Adequacy	Moderate concerns <sup>4</sup>	

<sup>1</sup>There were serious concerns with the methodological quality of the data as the qualitative data for 2 studies, including the largest study, came from open-ended questions in an online survey as opposed to interviews and insufficient information was provided about data analysis in 2 of the studies

<sup>2</sup>There were serious concerns with the methodological quality of the data as the qualitative data for 1 of the studies came from open-ended questions in an online survey as opposed to interviews and there was insufficient information provided in the remaining 2 studies regarding data collection and in 1 study regarding data analysis

<sup>3</sup>There were serious concerns with the methodological quality of the data as 1 of the studies conducted interviews with couples, rather than women alone, which may have impacted responses and the remaining study did not provide sufficient information about data collection; both studies report insufficient information regarding data analysis

<sup>4</sup>There were moderate concerns with the adequacy of the data as only 2 studies reported this theme

**Table 5: Clinical evidence profile: Theme 3. Source of support**

Study information		Description of theme or finding	CERQual assessment of the evidence		
Number of studies	Design		Criteria	Level of concern	Overall quality
<b>Sub-theme 3.1: Source of support – support takes multiple forms</b>					
2 (Carlsson 2016; Lafarge 2013)  n=149	2 qualitative studies (1 using threads and messages of a virtual community; 1 using online survey)	<b>Fetal anomaly:</b>  2 studies conducted in Sweden and the UK reported that women utilised multiple forms of support to cope following a termination of pregnancy for fetal anomaly and to come to terms with the decision they made.	Methodological limitations	Serious concerns <sup>1</sup>	Low
			Relevance	None or very minor concerns	
			Coherence	None or very minor concerns	
			Adequacy	Minor concerns <sup>2</sup>	
<b>Sub-theme 3.2: Source of support – psychological follow-up and counselling</b>					
3 (Asplin 2014; Cano 2016; Lafarge 2013)  n=54	3 qualitative studies (2 using semi-structured interviews; 1 using online survey)	<b>Fetal anomaly and not for fetal anomaly:</b>  2 studies conducted in Canada and Sweden reported that women felt some form of counselling or psychological support should be standard following a termination of pregnancy.  <b>Fetal anomaly:</b>	Methodological limitations	Moderate concerns <sup>3</sup>	Low
			Relevance	Moderate concerns <sup>4</sup>	
			Coherence	None or very minor concerns	
			Adequacy	Minor concerns <sup>5</sup>	

Study information		Description of theme or finding	CERQual assessment of the evidence		
Number of studies	Design		Criteria	Level of concern	Overall quality
		<p>1 study conducted in Sweden reported that it was not feasible for women to fund their own psychological support following a termination of pregnancy, particularly as women may be on sick leave.</p> <p>1 study conducted in the UK reported that the timing of counselling is an important factor and that some women felt vulnerable as they had started the process too early.</p>			
<b>Sub-theme 3.3: Source of support – support groups and women with similar experiences</b>					
5 (Asplin 2014; Carlsson 2016; Lafarge 2013; McCoyd 2009; Mikkavaara 2012)  n=196	5 qualitative studies (3 using semi-structured interviews; 1 using threads and messages of a virtual community; 1 using online survey)	<p><b>Fetal anomaly and not for fetal anomaly:</b></p> <p>5 studies conducted in Sweden, the UK and the USA reported that women valued being part of support groups and sharing their thoughts and feelings with women who had similar experiences.</p> <p><b>Fetal anomaly:</b></p> <p>2 studies conducted in the UK and the USA reported that being part of a support group was the most beneficial form of support for women and that they did not think they would have coped without this support.</p> <p>1 study conducted in the UK reported that being part of a support group may make some women feel worse or that their grief is inadequate.</p>	<p>Methodological limitations</p> <p>Relevance</p> <p>Coherence</p> <p>Adequacy</p>	<p>Serious concerns<sup>6</sup></p> <p>None or very minor concerns</p> <p>None or very minor concerns</p> <p>None or very minor concerns</p>	Low
<b>Sub-theme 3.4: Source of support – friends and family</b>					
2 (Lafarge 2013; McCoyd 2007)  n=57	2 qualitative studies (1 using semi-structured interviews; 1 using online survey)	<p><b>Fetal anomaly:</b></p> <p>2 studies conducted in the UK and the USA reported that support received from friends and family was of variable quality and often failed to provide comfort.</p>	<p>Methodological limitations</p> <p>Relevance</p> <p>Coherence</p> <p>Adequacy</p>	<p>Serious concerns<sup>7</sup></p> <p>None or very minor concerns</p> <p>None or very minor concerns</p> <p>Moderate concerns<sup>8</sup></p>	Very low
<b>Sub-theme 3.5: Source of support – welfare officers</b>					
1 (Asplin 2014)	1 qualitative study using	<b>Fetal anomaly:</b>	Methodological limitations	Moderate concerns <sup>9</sup>	Very low

Study information		Description of theme or finding	CERQual assessment of the evidence		
Number of studies	Design		Criteria	Level of concern	Overall quality
n=11	semi-structured interviews	1 study conducted in Sweden reported that contact with a welfare officer was appreciated as temporary support for a specific event.	Relevance	Serious concerns <sup>10</sup>	
			Coherence	None or very minor concerns	
			Adequacy	Serious concerns <sup>11</sup>	
<b>Sub-theme 3.6: Source of support – social workers</b>					
1 (McCoyd 2009)	1 qualitative study using semi-structured interviews	<b>Fetal anomaly:</b> 1 study conducted in the USA reported that written information from social workers was useful but social work services were not effective if there was insufficient contact to build rapport.	Methodological limitations	Moderate concerns <sup>9</sup>	Very low
n=30			Relevance	Moderate concerns <sup>12</sup>	
			Coherence	None or very minor concerns	
			Adequacy	Serious concerns <sup>11</sup>	
<b>Sub-theme 3.7: Source of support – genetic counsellors</b>					
1 (McCoyd 2009)	1 qualitative study using semi-structured interviews	<b>Fetal anomaly:</b> 1 study conducted in the USA reported that a follow-up call from genetic counsellors was appreciated following a termination of pregnancy and that, for many women, this was the time point where they realised they needed additional help.	Methodological limitations	Moderate concerns <sup>9</sup>	Very low
n=30			Relevance	Moderate concerns <sup>12</sup>	
			Coherence	None or very minor concerns	
			Adequacy	Serious concerns <sup>11</sup>	
<b>Sub-theme 3.8: Source of support – bereavement midwife</b>					
1 (Fisher 2015)	1 qualitative study using online survey	<b>Fetal anomaly:</b> 1 study conducted in the UK reported that women felt follow-up care from the bereavement midwife was excellent, when available.	Methodological limitations	Serious concerns <sup>13</sup>	Low
n=361			Relevance	None or very minor concerns	
			Coherence	None or very minor concerns	

Study information		Description of theme or finding	CERQual assessment of the evidence		
Number of studies	Design		Criteria	Level of concern	Overall quality
			Adequacy	Moderate concerns <sup>14</sup>	
<b>Sub-theme 3.9: Source of support – doulas</b>					
1 (Chor 2016)  n=30	1 qualitative study using semi-structured interviews	<b>Not for fetal anomaly:</b>  1 study conducted in the USA reported that some women were interested in having post-termination discussions with doulas as an opportunity to explore specific health-related topics, discuss psychosocial concerns and receive emotional support, and that a doula would be their first choice as they thought they were more emotionally attached than a counsellor would be. However, some women were not interested in post-termination support from a doula as they felt doulas lacked medical expertise or they wanted to move on.	Methodological limitations	Moderate concerns <sup>15</sup>	Very low
			Relevance	Moderate concerns <sup>12</sup>	
			Coherence	None or very minor concerns	
			Adequacy	Serious concerns <sup>11</sup>	

<sup>1</sup>There were serious concerns with the methodological quality of the data as neither of the studies collected data using interviews and 1 study reported insufficient information regarding data analysis

<sup>2</sup>There were minor concerns with the adequacy of the data as only 2 studies reported this theme; however, 1 of these studies was fairly large

<sup>3</sup>There were moderate concerns with the methodological quality of the data as the largest study collected qualitative data using an online survey and none of the studies reported sufficient information regarding data collection

<sup>4</sup>There were moderate concerns with the relevance of the data as only 1 study was conducted in UK and this study only reported one facet of this theme

<sup>5</sup>There were minor concerns with the adequacy of the data as the total number of participants for the 3 studies reporting this theme was small

<sup>6</sup>There were serious concerns with the methodological quality of the data as the qualitative data for 2 studies, including the largest study, came from open-ended questions in an online survey as opposed to interviews and insufficient information was provided about data analysis in 2 of the studies

<sup>7</sup>There were serious concerns with the methodological quality of the data as the qualitative data for 1 of the studies came from open-ended questions in an online survey as opposed to interviews and there was insufficient information provided in the remaining study regarding data collection and data analysis

<sup>8</sup>There were moderate concerns with the adequacy of the data as only 2 studies reported this theme

<sup>9</sup>There were moderate concerns with the methodological quality of the study as insufficient information was reported regarding recruitment and data collection

<sup>10</sup>There were serious concerns with the relevance of the data as none of the studies were conducted in the UK and it is unclear if this theme is applicable to the UK setting

<sup>11</sup>There were serious concerns with the adequacy of the data as only 1 study reported this theme

<sup>12</sup>There were moderate concerns with the relevance of the data as none of the studies were conducted in the UK; however, it is likely this theme would also apply to the UK setting

<sup>13</sup>There were serious concerns with the methodological quality of the data as the data was collected using open-ended questions in an online survey and insufficient information was reported regarding data analysis

<sup>14</sup>There were minor concerns with the adequacy of the data as only 1 study reported this theme; however, the study was large

<sup>15</sup>There were moderate concerns with the methodological quality of the study as insufficient information was reported regarding recruitment

**Table 6: Theme 4. Support should be specific to termination**

Study information		Description of theme or finding	CERQual assessment of the evidence		
Number of studies	Design		Criteria	Level of concern	Overall quality
4 (Lafarge 2013; Maguire 2015; McCoyd 2007; McCoyd 2009)  n=100	4 qualitative studies (3 using semi-structured interviews; 1 using online survey)	<p><b>Fetal anomaly:</b></p> <p>3 studies conducted in the UK and the USA reported that women felt uncomfortable attending support groups that were not specific to their situation or that support was inadequate if not tailored to their situation.</p> <p>1 study conducted in the USA reported that women felt they were undeserving of support if they had not told people the complete story.</p>	Methodological limitations	Serious concerns <sup>1</sup>	Low
			Relevance	None or very minor concerns	
			Coherence	None or very minor concerns	
			Adequacy	None or very minor concerns	

<sup>1</sup>There were moderate concerns with the methodological quality of the data as 1 of the studies collected data using open-ended questions in an online survey and insufficient information was reported regarding recruitment in 2 studies, data collection in 3 studies and data analysis in 2 studies

**Table 7: Theme 5. Lack of awareness of circumstances among health professionals encountered during follow-up care**

Study information		Description of theme or finding	CERQual assessment of the evidence		
Number of studies	Design		Criteria	Level of concern	Overall quality
1 (Asplin 2014)  n=11	1 qualitative study using semi-structured interviews	<p><b>Fetal anomaly:</b></p> <p>1 study conducted in Sweden reported that it was disappointing when healthcare professionals encountered during follow-up care were not aware of what the woman had been through.</p>	Methodological limitations	Moderate concerns <sup>1</sup>	Very low
			Relevance	Moderate concerns <sup>2</sup>	
			Coherence	None or very minor concerns	
			Adequacy	Serious concerns <sup>3</sup>	

<sup>1</sup>There were moderate concerns with the methodological quality of the study as insufficient information was reported regarding recruitment and data collection

<sup>2</sup>There were moderate concerns with the relevance of the data as none of the studies were conducted in the UK; however, it is likely this theme would also apply to the UK setting

<sup>3</sup>There were serious concerns with the adequacy of the data as only 1 small study reported this theme

See Appendix M for all relevant quotes related to each theme applied after thematic synthesis.

## **Appendix G – Economic evidence study selection**

### **Economic evidence for review question: What support would women like after a termination of the pregnancy?**

No economic evidence was identified which was applicable to this review question.

## **Appendix H – Economic evidence tables**

### **Economic evidence tables for review question: What support would women like after a termination of the pregnancy?**

No economic evidence was identified which was applicable to this review question.

## **Appendix I – Health economic evidence profiles**

### **Economic evidence profiles for review question: What support would women like after a termination of the pregnancy?**

No economic evidence was identified which was applicable to this review question.

## **Appendix J – Health economic analysis**

### **Economic analysis for review question: What support would women like after a termination of the pregnancy?**

No economic analysis was conducted for this review question.

## Appendix K – Excluded studies

### Excluded studies for review question: What support would women like after a termination of the pregnancy?

#### Clinical studies

Study	Reason for Exclusion
Aiken, A. R. A., Gomperts, R., Trussell, J., Experiences and characteristics of women seeking and completing at-home medical termination of pregnancy through online telemedicine in Ireland and Northern Ireland: a population-based analysis, <i>BJOG: An International Journal of Obstetrics and Gynaecology</i> , 124, 1208-1215, 2017	Themes not of interest for review: access to termination of pregnancy
Aiken, A. R. A., Guthrie, K. A., Schellekens, M., Trussell, J., Gomperts, R., Barriers to accessing abortion services and perspectives on using mifepristone and misoprostol at home in Great Britain, <i>Contraception</i> , 97, 177-183, 2018	Themes not of interest for review: barriers to accessing termination
Aiken, A. R. A., Lohr, P. A., Aiken, C. E., Forsyth, T., Trussell, J., Contraceptive method preferences and provision after termination of pregnancy: a population-based analysis of women obtaining care with the British Pregnancy Advisory Service, <i>BJOG: An International Journal of Obstetrics and Gynaecology</i> , 124, 815-824, 2017	Study design not of interest for review: quantitative study design
Alex, L., Hammarstrom, A., Women's experiences in connection with induced abortion - A feminist perspective, <i>Scandinavian Journal of Caring Sciences</i> , 18, 160-168, 2004	No themes of interest: support during decision making and termination, not after termination
Allen, R. H., Fortin, J., Bartz, D., Goldberg, A. B., Clark, M. A., Women's preferences for pain control during first-trimester surgical abortion: A qualitative study, <i>Contraception</i> , 85, 413-418, 2012	No themes of interest for review: women's preferences for pain control during termination of pregnancy
Alouini, S., Moutel, G., Venslauskaite, G., Gaillard, M., Truc, J. B., Herve, C., Information for patients undergoing a prenatal diagnosis, <i>European Journal of Obstetrics Gynecology and Reproductive Biology</i> , 134, 9-14, 2007	Population not of interest for review: women continuing with pregnancy and terminating pregnancy, no separate qualitative data for women undergoing termination of pregnancy
Alsulaiman, A., Hewison, J., Abu-Amero, K. K., Ahmed, S., Green, J. M., Hirst, J., Attitudes to prenatal diagnosis and termination of pregnancy for 30 conditions among women in Saudi Arabia and the UK, <i>Prenatal Diagnosis</i> , 32, 1109-1113, 2012	Population not of interest for review: women not undergoing termination of pregnancy
Altshuler, A. L., Ojanen-Goldsmith, A., Blumenthal, P. D., Freedman, L. R., A good abortion experience: A qualitative exploration of women's needs and preferences in clinical care, <i>Social Science &amp; Medicine</i> , 191, 109-116, 2017	Population not of interest for review: median time since termination 3.5 years
Altshuler, Anna L., Nguyen, Brian T., Riley, Halley E. M., Tinsley, Marilyn L., Tuncalp, Özge, Male Partners' Involvement in Abortion Care: A Mixed-Methods Systematic Review, <i>Perspectives on Sexual &amp; Reproductive Health</i> , 48, 209-219, 2016	Not all included studies in the systematic review met inclusion criteria for review: non-OECD countries, pre-2004 studies, quantitative study design
Alves, Aline, Albino, Andreza Teresa, Zampieri, Maria de Fatima Mota, One to look at of the adolescents on the changes in the pregnancy: promoting the mental health in the basic attention, <i>Revista Mineira de Enfermagem</i> , 15, 546-555, 2011	Article in Portuguese

Study	Reason for Exclusion
Andersson, I. M., Christensson, K., Gemzell-Danielsson, K. Experiences, feelings and thoughts of women undergoing second trimester medical termination of pregnancy. PLoS ONE 2014 9 (12)	No themes of interest: only themes about support are during, not after, termination

### **Economic studies**

No economic evidence was identified for this review.

## **Appendix L – Research recommendations**

### **Research recommendations for review question: What support would women like after a termination of the pregnancy?**

No research recommendations were made for this review question.

## Appendix M – Qualitative quotes

### Qualitative quotes for review question: What support would women like after a termination of the pregnancy?

Table 8: Theme 1: Need for support

Study	Evidence
<b>Sub-theme 1.1: Isolation</b>	
Asplin 2014	"The importance of having a plan for a next visit for follow-up about obstetrical issues was highlighted in some of the interviews: 'I wish there had been some sort of follow-up; you are lonely in a very special situation.' IP5" page 623
Asplin 2014	"'There is a sadness about whether you are capable of having a health child, and the first three months were like a huge bubble, and no one to turn to. They let go of you too easily.' IP3"
Fisher 2015	"Women also sourced emotional support from these organisations, which one participant described as 'a lifeline' (P106). These were particularly helpful in alleviating women's sense of isolation: 'The leaflets given to me helped knowing that it wasn't just me' (P280)." page 78
Lafarge 2013	"A lack of support, particularly in the early stage, engendered much suffering: 'I was horrified to spend a weekend with some of [my] closest friends, the week of the funeral, and not once did they ask about the funeral or how we were . . . remember feeling like a leper after that weekend and that people avoided talking to me.'" page 929
Maguire 2015	"Sharing one's story invited others to share their stories, thus establishing social connection and easing the burden of social isolation" page 5
McCoyd 2009	"One of the most appreciated aspects of genetic counseling services was a follow-up call in the weeks following the termination procedure. Many mentioned that call as the time they realized that they needed to get some help for their emotional needs. Several reported that genetic counselors "saved my life" by getting the patient pulled out of her isolation and connecting her to bereavement counseling services or support groups. Felicia says: 'So the genetic counselor called a couple of days later and she said, "Felicia, how are you doing?" And I said, "Well, I'm just a mess." And she said, "That's ok—because I'd be more worried if you weren't a mess because all through this you've been pretty stoic. I don't think I heard you cry one time." And it's funny, because I think I usually waited til we hung up and I'd cry, but not this time. I think she had tried to get a hold of me earlier. . . . And so she left a message on my cell phone—and by that Thursday or Friday, she was leaving these messages like "Call me—I need to hear from you" frantic messages—and it made me feel good—like someone was looking after me that actively—not just kind of, "Oh, you OK?" And then she said, "It's very early. There're a lot of emotions you need to get through yet, so I'd like to call you early next week if that's OK." . . . I felt like a lot of my eggs were in the basket of the genetic counselor, because if she hadn't followed up, and if she hadn't seen how upset I was, and if she didn't say she'd get the names and numbers of groups to me, any one of those steps along the way could have shut it down, because without the group, I'm not sure I would have ever come out of the cave.'" page 528-529
<b>Sub-theme 1.2: Negative feelings</b>	
Asplin 2014	"One woman spoke of her need for help: 'I was so tired, bodily tired, and all the negative feelings within me were strengthened; I needed help. My life was upside down.' IP7" page 624
Mukkavaara 2012	"The women needed someone to share their feelings with. The women regretted the abortion to and fro and some of them expressed thoughts that they would never become normal again." page 723
<b>Sub-theme 1.3: Validation of feelings</b>	

Study	Evidence
McCoyd 2007	"Male gender roles do not incorporate prenatal bonding, verbalization of emotion, and tolerance for tearful emotional expression in most situations. Although men experience these things, they may stifle their own emotional expression in order to be "strong" for their grieving partners. Women from the study group report this as a source of extreme stress within the relationship as they tend to interpret the lack of emotional expression as indicating a lack of attachment on the part of the partners to both themselves and the pregnancy they shared. Nanci describes how this extends to grieving: 'About 3–4 weeks after Maddy's burial, I really felt him not only pulling away from me emotionally, but also felt as though he was pushing me to "be okay". I resented it. And I was terribly hurt and felt completely alone. I would come to him needing to talk and though I felt he would listen, he would also try to say things to make me feel better which I didn't want to hear. I wanted someone to say, "Yes, you're right. You should be sad. You should be angry. It's Okay to feel this way". And he really couldn't do it. I think he believed that if he gave me permission to really go deep into my pain that I would never come out.'" page 45
McCoyd 2009	"One of the most appreciated aspects of genetic counseling services was a follow-up call in the weeks following the termination procedure. Many mentioned that call as the time they realized that they needed to get some help for their emotional needs. Several reported that genetic counselors "saved my life" by getting the patient pulled out of her isolation and connecting her to bereavement counseling services or support groups. Felicia says: 'So the genetic counselor called a couple of days later and she said, "Felicia, how are you doing?" And I said, "Well, I'm just a mess." And she said, "That's ok—because I'd be more worried if you weren't a mess because all through this you've been pretty stoic. I don't think I heard you cry one time." And it's funny, because I think I usually waited til we hung up and I'd cry, but not this time. I think she had tried to get a hold of me earlier. . . . And so she left a message on my cell phone—and by that Thursday or Friday, she was leaving these messages like "Call me—I need to hear from you" frantic messages—and it made me feel good—like someone was looking after me that actively—not just kind of, "Oh, you OK?" And then she said, "It's very early. There're a lot of emotions you need to get through yet, so I'd like to call you early next week if that's OK." . . . I felt like a lot of my eggs were in the basket of the genetic counselor, because if she hadn't followed up, and if she hadn't seen how upset I was, and if she didn't say she'd get the names and numbers of groups to me, any one of those steps along the way could have shut it down, because without the group, I'm not sure I would have ever come out of the cave.'" page 528-529
McCoyd 2009	"Debby had to search before finding support: 'I spent a lot of time online searching for grief groups and finally found one (I think we found each other) that was able to put me into contact with others who have walked in my proverbial shoes. It was wonderful knowing that everything I was feeling—anger, alone, guilt, the hatred of pregnant women—was completely natural and that everyone went through it in one form or another. I guess being part of a group like that made what you were feeling seem warranted—and that nobody was judging you.'" page 530
<b>Sub-theme 1.4: Specific questions</b>	
Asplin 2014	"Many of the women felt despair, which they had to take care of everything by themselves: 'I think when you have had a cruel situation you need the possibility of reaching someone with your specific questions.' IP5" page 624
<b>Sub-theme 1.5: Dealing with milestones and the future</b>	
Asplin 2014	"Most of the women were not able to work or do anything; they wanted help with how to think about the future, milestones to reach or ways to behave to feel content with the situation that had occurred: 'I had a hard time to focus the first three months after termination; everything felt quite meaningless and I needed help to get more energy and to concentrate, not just be on the sick list.' IP8" page 624-625

**Table 9: Theme 2: Access to support**

Study	Evidence
<b>Sub-theme 2.1: Variation in whether follow-up is given</b>	
Asplin 2014	"Most of the women felt it was too easy to end up without any follow-up. How the treatment and care were given depended, to a great extent, on the woman herself or on the health care professionals they meet, rather than on established routines" page 623
Fisher 2015	"Aftercare was another important element in women's experience. However, most participants reported not receiving any, which one equated to 'feeling abandoned'(P234)". page 77
Lafarge 2013	"Support from health professionals was particularly important but in many cases this was limited posttermination." page 929
Mukkavaara 2012	"All the participating women had contact with the counsellor before the abortion and described that the treatment and the emotional support from the hospital staff were excellent. Women, who had declined contact after the abortion, regretted it later". page 722
<b>Sub-theme 2.2: Availability over time</b>	
Lafarge 2013	"Support was key in helping women cope with their loss, but most women indicated that it faded over time." page 929
McCoyd 2007	"Many believe they will feel better by the time of the first physician visit after the TFA. Since most find grief intensifying for the first 3–6 weeks and lasting until the due date [16], this is an expectation that leads women to believe there is something wrong with their grief experience. Felicia was able to describe this well: 'Daniel [her husband] had said to me through this process, 'just wait until we go see Dr. N for the check-up' kind of like it was a touchstone and I would be all better. Kind of like the healing would be all done then – and I bought that, because I wanted to believe it. So after I wasn't better by then, I got back in touch with the genetic counselor and said 'could you give me those names . . . I need those names' [of counselors and support groups] . . .'" page 41
McCoyd 2009	"The few comprehensive programs that exist do have sporadic groups, but few have ongoing support, despite the fact that this type of support is almost universally desired among this study group." page 530
<b>Sub-theme 2.3: Stigma impacts disclosure and access</b>	
Lotto 2016	"The stigmatisation associated with termination is well documented. (Kumar et al., 2009; Norris et al., 2011) For parents, this could result in social isolation where disclosure to peers was avoided, and hence support was not sought, due to fear of negative reactions." page 17
McCoyd 2007	"This statement is a mythic expectation that defines the milieu in which the woman sees herself. This then leads her to be secretive about the experience she has been through, reluctant to seek support from friends and family as she processes her grief, and isolated at the time she is most in need of empathy [12]." page 41
McCoyd 2007	"The stigma of abortion, particularly in the US, heavily influences women's grief process as they harbor a mythic expectation that they will be judged negatively. Yet, without risking this judgment, women are left with few supports and little ability to mobilize their own defenses against the internalized sense of stigma they often develop." page 41
McCoyd 2007	"Women long for support, yet fear telling "the whole story" about the circumstances of their loss for fear of negative judgment. Marilyn explains: 'I do think that bearing the secret was an additional stress on me. No question about it, but telling them the truth would have, or so I imagine[d], be additional stress as well, just a different kind of stress.'" page 44

**Table 10: Theme 3: Source of support**

Study	Evidence
<b>Sub-theme 3.1: Support takes multiple forms</b>	
Carlsson 2016	"Strategies to cope with the decision included writing, caring for oneself, spending time with the family, and professional/social support. 'It has really helped talking to someone in a similar situation.' P36" page 58
Lafarge 2013	"Support after the termination was essential to the way women coped. This support took many forms." page 929
<b>Sub-theme 3.2: Psychological follow-up and counselling</b>	
Asplin 2014	"On some occasions it may be easier for women to be part of a system that guides them through managing their difficulties without them having to be asked if they want to be a part of it. One woman said she wished she and her partner had been told about the significance of both parents having a conversation with the caregivers and that it had not been presented as an option: 'It has been blocked. I wish there had been a direction about the significance of having a dialogue, provided from the care providers' point of view. I have been lonely; my husband did not want to go to someone to talk about the experience and I did not want to go without him. The standpoint should be that you were offered a standard follow-up with some sort of psychological support' IP3" page 622
Asplin 2014	"Contact with a welfare officer was appreciated and was seen as a good and temporary support for a specific event. A few of the women thought it was enough for closure, whereas others felt frustrated and needed more concrete help for handling the unexpected and coping with life and all days of the week again: 'I wanted a more professional psychological help and phoned a therapist, but the high cost, 1200 Swedish crowns per hour was not feasible in the circumstances of me sick-listed and [having] no insurance coverage because a fetus does not count as a legal person before gestational week 22.' IP2" page 624
Cano 2016	"Like Erin (Fig. 3), most participants, based on their own experiences, recommended that follow-up counseling be routinely offered, as they felt contact with health care providers was abruptly cut off after the procedure. As Michelle suggested, 'I think I would offer better, either counseling before or some counseling before and post. And I don't know if that's standard, but, yeah, there was just no, no follow-up'." page 493
Lafarge 2013	"Professional support was also dispensed in the form of counseling, which was mainly used by women more advanced in the recovery process. Even though the majority found counseling helpful, some felt that they had started the process too early and felt vulnerable as a result. The timing of the intervention might therefore be an important factor." page 929
<b>Sub-theme 3.3: Support groups and women with similar experiences</b>	
Asplin 2014	"To ally with other women in the same situation was not a first priority but was experienced as very valuable for those who did so: 'We meet a couple on the ward for the same matter and we have provided for each other, very nicely. IP6" page 623
Carlsson 2016	"Strategies to cope with the decision included writing, caring for oneself, spending time with the family, and professional/social support. 'It has really helped talking to someone in a similar situation.' P36" page 58
Lafarge 2013	"Support groups were another source of emotional support, which is unsurprising given that the sample was drawn from a support group. .... '[It] has been the most amazing thing though as everyone really understands more than anyone else ever could. I still read the posts every day and have done some fund-raising for them. I would never, ever have done so well without their support.'" page 920
Lafarge 2013	"Reasons for using the group email network/forum varied, but the underlying drive was to derive a sense of solidarity. For some women, the forum became the only opportunity to share their story: 'I feel completely alone in my grief as no

Study	Evidence
	one seems to understand just how profound it is. This includes my partner.' However, other women reported having ambivalent feelings about using the forum. One woman saw the forum as a lifeline during dark days, but actively avoided it on good days to prevent being 'brought back to the darkness.' Another also had mixed feelings about the email network because some of the comments led her to believe that her way of grieving was inadequate: 'Sometimes I found reading other people's accounts on the forum unhelpful as I felt guilty for not feeling as emotional or terrible as they did, but in time I was able to feel that this was positive, that I was coping and mentally strong.'" page 929
Lafarge 2013	"Going to parents' meetings was another coping resource, and it provided women with a 'sense check' regarding where they were in the healing process." page 929-930
McCoyd 2009	"One of the most appreciated aspects of genetic counseling services was a follow-up call in the weeks following the termination procedure. Many mentioned that call as the time they realized that they needed to get some help for their emotional needs. Several reported that genetic counselors "saved my life" by getting the patient pulled out of her isolation and connecting her to bereavement counseling services or support groups. Felicia says: 'So the genetic counselor called a couple of days later and she said, "Felicia, how are you doing?" And I said, "Well, I'm just a mess." And she said, "That's ok—because I'd be more worried if you weren't a mess because all through this you've been pretty stoic. I don't think I heard you cry one time." And it's funny, because I think I usually waited til we hung up and I'd cry, but not this time. I think she had tried to get a hold of me earlier. . . . And so she left a message on my cell phone—and by that Thursday or Friday, she was leaving these messages like "Call me—I need to hear from you" frantic messages—and it made me feel good—like someone was looking after me that actively—not just kind of, "Oh, you OK?" And then she said, "It's very early. There're a lot of emotions you need to get through yet, so I'd like to call you early next week if that's OK." . . . I felt like a lot of my eggs were in the basket of the genetic counselor, because if she hadn't followed up, and if she hadn't seen how upset I was, and if she didn't say she'd get the names and numbers of groups to me, any one of those steps along the way could have shut it down, because without the group, I'm not sure I would have ever come out of the cave.'" page 528-529
McCoyd 2009	"Support groups were critical to the coping and survival of many women in the study group. Sometimes genetic counselors or social workers referred the women, and often they found these resources on their own. All but one respondent who attended a group reported that it was the most important support they received. The one who expressed some reservations had been in a group that was disapproving of "social" abortions and the respondent had had "social abortions" in her past, leading her to feel judged and not truly part of the group support dynamic." page 530
McCoyd 2009	"I would tell couples to talk with someone. I think a therapist is great, but the best thing to do is join a support group especially for termination of wanted pregnancies. Whether it is on line like what I did, or an actual group that meets, it means more to talk to someone who has been through this. I think that after the procedure, everyone deals differently." page 530.
Mukkavaara 2012	The women wanted to share their feelings and thoughts with other women having similar experiences." page 722
<b>Sub-theme 3.4: Friends and family</b>	
Lafarge 2013	"Emotional support was also sourced from friends and relatives, but its quality varied greatly..." page 929
McCoyd 2007	"Even so, for those who receive support from friends and family, the assurance often fails to comfort. Frances says: 'I also am bewildered when people assure me "I also would have ended the pregnancy"'. A decision like this is ultimately

Study	Evidence
	based on a thousand unanticipated and very personal factors unique to your exact circumstances." page 43
<b>Sub-theme 3.5: Welfare officers</b>	
Asplin 2014	"Contact with a welfare officer was appreciated and was seen as a good and temporary support for a specific event. A few of the women thought it was enough for closure, whereas others felt frustrated and needed more concrete help for handling the unexpected and coping with life and all days of the week again..." page 624
<b>Sub-theme 3.6: Social workers</b>	
McCoyd 2009	"A few respondents (three) had a brief visit from a social worker after their loss, usually just to provide a packet of loss group materials—often geared toward spontaneous losses. These types of interventions generally were perceived as trite and worthless because they were not tailored to the type of loss the women had experienced and were clearly done "on the fly" with little intent to spend time processing the woman's emotions. Although the written information was useful, social work services were not as effective unless there was sufficient contact throughout the experience to develop rapport and be able to provide attuned support." page 529-530
<b>Sub-theme 3.7: Genetic counsellors</b>	
McCoyd 2009	"One of the most appreciated aspects of genetic counseling services was a follow-up call in the weeks following the termination procedure. Many mentioned that call as the time they realized that they needed to get some help for their emotional needs. Several reported that genetic counselors "saved my life" by getting the patient pulled out of her isolation and connecting her to bereavement counseling services or support groups. Felicia says: 'So the genetic counselor called a couple of days later and she said, "Felicia, how are you doing?" And I said, "Well, I'm just a mess." And she said, "That's ok—because I'd be more worried if you weren't a mess because all through this you've been pretty stoic. I don't think I heard you cry one time." And it's funny, because I think I usually waited til we hung up and I'd cry, but not this time. I think she had tried to get a hold of me earlier. . . . And so she left a message on my cell phone—and by that Thursday or Friday, she was leaving these messages like "Call me—I need to hear from you" frantic messages—and it made me feel good—like someone was looking after me that actively—not just kind of, "Oh, you OK?" And then she said, "It's very early. There're a lot of emotions you need to get through yet, so I'd like to call you early next week if that's OK." . . . I felt like a lot of my eggs were in the basket of the genetic counselor, because if she hadn't followed up, and if she hadn't seen how upset I was, and if she didn't say she'd get the names and numbers of groups to me, any one of those steps along the way could have shut it down, because without the group, I'm not sure I would have ever come out of the cave.'" page 528-529
<b>Sub-theme 3.8: Bereavement midwives</b>	
Fisher 2015	"When aftercare was available, women found it beneficial: 'The care was v [very] good. [The] bereavement midwife [was] excellent and I saw her lots after' (P102)." page 77
<b>Sub-theme 3.9: Doulas</b>	
Chor 2016	"Women perceived the possibility of having post-abortion discussions with doulas as an opportunity to explore specific health-related topics and receive additional emotional support." page 6
Chor 2016	"Other women would have liked to build on the connection formed during the abortion to discuss persistent psychosocial concerns. ' . . . the doula seems like an emotional being, and it seems like somebody who is very comforting. . . if I needed to talk with someone, then a doula would probably be my first choice than a counselor. . . they're more emotionally attached than a counselor would be.'" page 6

Study	Evidence
Chor 2016	"A few women were not interested in post-abortion doula support, feeling that doulas lacked medical expertise or that they wanted to 'move on'". page 6

**Table 11: Theme 4: Support should be specific to termination**

Study	Evidence
Lafarge 2013	"A few participants also used a support group focused specifically on stillbirth and neonatal deaths; some found it helpful, but others reported feeling uncomfortable given that this particular group only dealt with naturally occurring or accidental deaths rather than terminations." page 930
Maguire 2015	"Women referenced support networks as a potential outlet for their social isolation and expressed frustration that they had inadequate exposure to such networks (quote 4.5). They described a need for support networks that were specific to their situation, suggesting that general support groups did not adequately address their unique grief." page 5; "I wish I could get into a [support] group where it's more related to that specific situation... if I was in a group with a lot of women... [who had] lost their babies to the same thing, like genetic diseases or acrnaia... That would be more coping for me than... a group that they just lost their children." page 12
McCoyd 2007	"They adjust the story to the level of support they believe the listener may be able to provide, carefully adjusting disclosure to perceived support. When support is granted (i.e., expressions of sympathy are extended) in cases where the woman did not tell "the whole story", she feels the support is ill-gotten and is unable to utilize it effectively. Sarah talks about this clearly: 'I think I only told the people I knew would support me. To have anyone condemn me would have hurt too badly. I felt fragile as glass. The people I worked with (except two close friends) I simply told them "I lost the baby". Then some people who I told we simply lost the baby due to a genetic condition commented on how brave we were to continue the pregnancy. This just added to the guilt . . . There were some people I wished I could share the whole story with, but in the end felt I just couldn't risk my heart. Everyone I told was 100 percent supportive. I told all of the people closest to me. I wish I could tell everyone . . . Sometimes there is that guilt though of not telling the whole story.'" page 44-45
McCoyd 2009	"A few respondents (three) had a brief visit from a social worker after their loss, usually just to provide a packet of loss group materials—often geared toward spontaneous losses. These types of interventions generally were perceived as trite and worthless because they were not tailored to the type of loss the women had experienced and were clearly done "on the fly" with little intent to spend time processing the woman's emotions..." page 529-530

**Table 12: Theme 5: Lack of awareness of circumstances among health professionals encountered during follow-up care**

Study	Evidence
Asplin 2014	"...Visits were given for obstetrical issues, but became a disappointment when the caregiver was so unaware of what I been through and was not up-to-date.' IP6." page 624
