Disclaimer

The recommendations in this guideline represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, professionals are expected to take this guideline fully into account, alongside the individual needs, preferences and values of their patients or service users. The recommendations in this guideline are not mandatory and the guideline does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and, where appropriate, their carer or guardian.

Local commissioners and providers have a responsibility to enable the guideline to be applied when individual health professionals and their patients or service users wish to use it. They should do so in the context of local and national priorities for funding and developing services, and in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities. Nothing in this guideline should be interpreted in a way that would be inconsistent with compliance with those duties.

NICE guidelines cover health and care in England. Decisions on how they apply in other UK countries are made by ministers in the [Welsh Government](#), [Scottish Government](#), and [Northern Ireland Executive](#). All NICE guidance is subject to regular review and may be updated or withdrawn.

1 Review Questions

- RQ 1.1 What is the accuracy of cystatin C-based equations to estimate GFR as a measurement of kidney function in adults, children and young people?
- RQ 1.2 In adults, children and young people from black, Asian and other minority ethnic groups with CKD, what is the diagnostic accuracy of eGFR calculations?
- RQ 1.3 In children and young people with CKD, what is the accuracy of reagent strips for detecting protein and blood in urine?
- RQ 1.4 What is the accuracy of albumin:creatinine ratio versus protein:creatinine ratio measurements to quantify proteinuria in children and young people with CKD?
- RQ 1.5 Which children and young people should be tested for CKD?
- RQ 2.1 What is the best combination of measures of kidney function and markers of kidney damage to identify increased risk of progression in adults, children and young people with CKD?
- RQ 2.3 For adults, children and young people with suspected or diagnosed CKD, what is the effect of interventions to lower proteinuria?
- RQ 3.1 For adults, children and young people with CKD, what constitutes a clinically significant decline in eGFR in terms of risk of kidney disease progression?
- RQ 3.2 For adults, children and young people with CKD what is the optimal monitoring frequency based on different rates of decline in eGFR?
- RQ 4.1 In adults, children and young people with CKD, what are the optimal blood pressure ranges for slowing kidney disease progression, and for reducing cardiovascular disease risk and mortality?
- RQ 5.1 For people with stage 4 or 5 CKD who are not on dialysis, which phosphate binder, calcium and non-calcium based, is most effective in managing serum phosphate and its associated outcomes?
- RQ 5.2 For people with stage 5 CKD who are on dialysis, which phosphate binder, calcium and non-calcium based, is most effective in managing serum phosphate and its associated outcomes?
- RQ 6.1 For people with CKD, what eGFR threshold should trigger investigation of anaemia being due to CKD?
- RQ 7.1 What should be the aspirational haemoglobin target range for children and young people undergoing treatment for anaemia in CKD?
- RQ 8.1 For people with stage 5 CKD who are on dialysis, what amount of IV iron is most clinically and cost effective in managing anaemia and its associated outcomes?
