

Summary of antimicrobial prescribing guidance – managing common infections

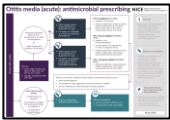

- For all PHE guidance, follow [PHE's principles of treatment](#).
- See BNF for appropriate use and dosing in specific populations, for example, hepatic impairment, renal impairment, pregnancy and breastfeeding.

|---|--|--|--|---|--------------|--|
| | | | Adult | Child | | |
| ▼ Upper respiratory tract infections | | | | | | |
| Acute sore throat NICE Last updated: Jan 2018 | Advise paracetamol, or if preferred and suitable, ibuprofen for pain. Medicated lozenges may help pain in adults. Use FeverPAIN or Centor to assess symptoms: FeverPAIN 0-1 or Centor 0-2: no antibiotic; FeverPAIN 2-3: no or back-up antibiotic; FeverPAIN 4-5 or Centor 3-4: immediate or back-up antibiotic. Systemically very unwell or high risk of complications: immediate antibiotic. <i>For detailed information click the visual summary icon.</i> | First choice: phenoxymethylpenicillin | 500mg QDS or 1000mg BD | | 5 to 10 days |  |
| | | Penicillin allergy: clarithromycin OR | 250mg to 500mg BD | | 5 days | |
| | | erythromycin (preferred if pregnant) | 250mg to 500mg QDS or 500mg to 1000mg BD |  | 5 days | |

| | | | Adult | Child | | |
| Influenza Public Health England Last updated: Feb 2019 | <p>Annual vaccination is essential for all those 'at risk' of influenza.^{1D} Antivirals are not recommended for healthy adults.^{1D,2A+} Treat 'at risk' patients with 5 days oseltamivir 75mg BD,^{1D} when influenza is circulating in the community, and ideally within 48 hours of onset (36 hours for zanamivir treatment in children),^{1D,3D} or in a care home where influenza is likely.^{1D,2A+}</p> <p>At risk: pregnant (and up to 2 weeks post-partum); children under 6 months; adults 65 years or older; chronic respiratory disease (including COPD and asthma); significant cardiovascular disease (not hypertension); severe immunosuppression; chronic neurological, renal or liver disease; diabetes mellitus; morbid obesity (BMI>40).^{4D} See the PHE Influenza guidance for the treatment of patients under 13 years.^{4D} In severe immunosuppression, or oseltamivir resistance, use zanamivir 10mg BD^{5A+,6A+} (2 inhalations twice daily by diskhaler for up to 10 days) and seek advice.^{4D}</p> <p>Access supporting evidence and rationales on the PHE website.</p> | | | | | |
| Scarlet fever (GAS) Public Health England Last updated: Oct 2018 | <p>Prompt treatment with appropriate antibiotics significantly reduces the risk of complications.^{1D} Vulnerable individuals (immunocompromised, the comorbid, or those with skin disease) are at increased risk of developing complications.^{1D}</p> | Phenoxyethylpenicillin ^{2D} | 500mg QDS ^{2D} |  | 10 days ^{3A+,4A+,5A+} | <p>Not available. Access supporting evidence and rationales on the PHE website</p> |
| | | Penicillin allergy: clarithromycin ^{2D} | 250mg to 500mg BD ^{2D} |  | 5 days ^{2D,5A+} | |
| | | Optimise analgesia ^{2D} and give safety netting advice | | | | |
| Acute otitis media NICE Last updated: Feb 2018 | <p>Regular paracetamol or ibuprofen for pain (right dose for age or weight at the right time and maximum doses for severe pain).</p> <p>Otorrhoea or under 2 years with infection in both ears: no, back-up or immediate antibiotic.</p> <p>Otherwise: no or back-up antibiotic.</p> <p>Systemically very unwell or high risk of complications: immediate antibiotic.</p> <p>For detailed information click on the visual summary.</p> | First choice: amoxicillin | |  | 5 to 7 days |  |
| | | Penicillin allergy: clarithromycin OR erythromycin (preferred if pregnant) | | | 5 to 7 days | |
| | | Second choice: co-amoxiclav | | | 5 to 7 days | |
| | | | | | 5 to 7 days | |
| Acute otitis externa Public Health England Last updated: Nov 2017 | <p>First line: analgesia for pain relief,^{1D,2D} and apply localised heat (such as a warm flannel).^{2D}</p> <p>Second line: topical acetic acid or topical antibiotic +/- steroid: similar cure at 7 days.^{2D,3A+,4B-}</p> <p>If cellulitis or disease extends outside ear canal, or systemic signs of infection, start oral flucloxacillin and refer to exclude malignant otitis externa.^{1D}</p> | Second line: topical acetic acid 2% ^{2D,4B-} OR topical neomycin sulphate with corticosteroid ^{2D,5A-} | 1 spray TDS ^{5A-} |  | 7 days ^{5A} | <p>Not available. Access supporting evidence and rationales on the PHE website</p> |
| | | | 3 drops TDS ^{5A-} |  | 7 days (min) to 14 days (max) ^{3A+} | |
| | | If cellulitis: flucloxacillin ^{6B+} | 250mg QDS ^{2D} If severe: 500mg QDS ^{2D} |  | 7 days ^{2D} | |

| Infection | Key points | Medicine | Doses | | Length | Visual summary |
|--|---|---|--|---|--------|--|
| | | | Adult | Child | | |
| Sinusitis NICE Last updated: Oct 2017 | Advise paracetamol or ibuprofen for pain. Little evidence that nasal saline or nasal decongestants help, but people may want to try them. Symptoms for 10 days or less: no antibiotic. Symptoms with no improvement for more than 10 days: no antibiotic or back-up antibiotic depending on likelihood of bacterial cause. Consider high-dose nasal corticosteroid (if over 12 years). Systemically very unwell or high risk of complications: immediate antibiotic. <i>For detailed information click on the visual summary.</i> | First choice: phenoxymethylpenicillin | 500mg QDS | | 5 days |  |
| | | Penicillin allergy: doxycycline (not in under 12s) OR clarithromycin OR | 200mg on day 1, then 100mg OD | | 5 days | |
| | | erythromycin (preferred if pregnant) | 250 to 500mg QDS or 500 to 1000mg BD |  | 5 days | |
| | | Second choice or first choice if systemically very unwell or high risk of complications: co-amoxiclav | 500/125mg TDS | | 5 days | |
| | | | | | | |
| ▼ Lower respiratory tract infections | | | | | | |
| Note: Low doses of penicillins are more likely to select for resistance. ^{1D} Do not use fluoroquinolones (ciprofloxacin, ofloxacin) first line because they may have long-term side effects and there is poor pneumococcal activity. ^{2B--3D-} Reserve all fluoroquinolones (including levofloxacin) for proven resistant organisms. ^{1D} | | | | | | |
| Acute exacerbation of COPD NICE Last updated: Dec 2018 | Many exacerbations are not caused by bacterial infections so will not respond to antibiotics. Consider an antibiotic, but only after taking into account severity of symptoms (particularly sputum colour changes and increases in volume or thickness), need for hospitalisation, previous exacerbations, hospitalisations and risk of complications, previous sputum culture and susceptibility results, and risk of resistance with repeated courses. Some people at risk of exacerbations may have antibiotics to keep at home as part of their exacerbation action plan. <i>For detailed information click on the visual summary. See also the NICE guideline on COPD in over 16s.</i> | First choice: amoxicillin OR | 500mg TDS (see BNF for severe infection) | - | 5 days |  |
| | | doxycycline OR | 200mg on day 1, then 100mg OD (see BNF for severe infection) | - | | |
| | | clarithromycin | 500mg BD | - | | |
| | | Second choice: use alternative first choice | | | | |
| | | Alternative choice (if person at higher risk of treatment failure): co-amoxiclav OR | 500/125mg TDS | - | 5 days | |
| | | levofloxacin (consider safety issues) OR | 500mg OD | - | | |
| | | co-trimoxazole (consider safety issues) | 960mg BD | - | | |
| | | IV antibiotics (<i>click on visual summary</i>) | | | | |

| | | | Adult | Child | | | |
| Acute exacerbation of bronchiectasis (non-cystic fibrosis) NICE Last updated: Dec 2018 | <p>Send a sputum sample for culture and susceptibility testing.</p> <p>Offer an antibiotic.</p> <p>When choosing an antibiotic, take account of severity of symptoms and risk of treatment failure. People who may be at higher risk of treatment failure include people who've had repeated courses of antibiotics, a previous sputum culture with resistant or atypical bacteria, or a higher risk of developing complications.</p> <p>Course length is based on severity of bronchiectasis, exacerbation history, severity of exacerbation symptoms, previous culture and susceptibility results, and response to treatment.</p> <p>Do not routinely offer antibiotic prophylaxis to prevent exacerbations.</p> <p>Seek specialist advice for preventing exacerbations in people with repeated acute exacerbations. This may include a trial of antibiotic prophylaxis after a discussion of the possible benefits and harms, and the need for regular review.</p> <p><i>For detailed information click on the visual summary.</i></p> | First choice empirical treatment: amoxicillin (preferred if pregnant) OR | 500mg TDS | | 7 to 14 days |  | |
| | | doxycycline (not in under 12s) OR | 200mg on day 1, then 100mg OD | | 7 to 14 days | | |
| | | Clarithromycin | 500mg BD | | 7 to 14 days | | |
| | | Alternative choice (if person at higher risk of treatment failure) empirical treatment: co-amoxiclav OR | 500/125mg TDS | | 7 to 14 days | | |
| | | levofloxacin (adults only: consider safety issues) OR | 500mg OD or BD | | 7 to 14 days | | |
| | | ciprofloxacin (children only, on specialist advice: consider safety issues) | - | | 7 to 14 days | | |
| | | IV antibiotics (<i>click on visual summary</i>) | | | | | |
| | | When current susceptibility data available: choose antibiotics accordingly | | | | | |

| | | | Adult | Child | | |
| Community-acquired pneumonia Public Health England Last updated: Nov 2017 | Use CRB65 score to guide mortality risk, place of care, and antibiotics. ^{1D} Each CRB65 parameter scores one: C onfusion (AMT<8 or new disorientation in person, place or time); R espiratory rate >30/minute; B P systolic <90, or diastolic <60; age > 65 . Score 0: low risk, consider home-based care; 1 to 2: intermediate risk, consider hospital assessment; 3 to 4: urgent hospital admission. ^{1D} Give safety net advice ^{1D} and likely duration of different symptoms, such as cough 6 weeks. ^{1D} Clinically assess need for dual therapy for atypicals. Mycoplasma infection is rare in over 65s. ^{2A+,3C} | CRB65=0: amoxicillin ^{1D,4D} OR | 500mg TDS ^{5A+} |  | 5 days (review at 3 days); ^{1D} 7 to 10 days if poor response ^{1D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | clarithromycin ^{2A+,4D,5A+} OR | 500mg BD ^{5A+} |  | | |
| | | doxycycline ^{2A+,4D} | 200mg stat then 100mg OD ^{6A-} | - | | |
| | | CRB65 = 1 to 2 and at home: Clinically assess need for dual therapy for atypicals: amoxicillin ^{1D, 4D} AND | 500mg TDS ^{5A+} |  | 7 to 10 days ^{1D} | |
| | | clarithromycin ^{2A+,4D,5A+} OR | 500mg BD ^{5A+} |  | | |
| | | doxycycline alone ^{4D} | 200mg stat then 100mg OD ^{6A-} | - | | |
| ▼ Urinary tract infections | | | | | | |
| Recurrent urinary tract infection NICE Last updated: Oct 2018 | First advise about behavioural and personal hygiene measures, and self-care (with D-mannose or cranberry products) to reduce the risk of UTI. For postmenopausal women, if no improvement, consider vaginal oestrogen (review within 12 months). For non-pregnant women, if no improvement, consider single-dose antibiotic prophylaxis for exposure to a trigger (review within 6 months). For non-pregnant women (if no improvement or no identifiable trigger) or with specialist advice for pregnant women, men, children or young people, consider a trial of daily antibiotic prophylaxis (review within 6 months). For detailed information click on the visual summary. See also the NICE guideline on urinary tract infection in under 16s: diagnosis and management and the Public Health England urinary tract infection: diagnostic tools for primary care . | First choice antibiotic prophylaxis: trimethoprim (avoid in pregnancy) OR | 200mg single dose when exposed to a trigger or 100mg at night |  | - |  |
| | | nitrofurantoin (avoid at term) - if eGFR ≥45 ml/minute | 100mg single dose when exposed to a trigger or 50 to 100mg at night |  | - | |
| | | Second choice antibiotic prophylaxis: amoxicillin OR | 500mg single dose when exposed to a trigger or 250mg at night |  | - | |
| | | Cefalexin | 500mg single dose when exposed to a trigger or 125mg at night |  | - | |

| Infection | Key points | Medicine | Doses | | Length | Visual summary |
|-----------|------------|--|-------|---|--------|----------------|
| | | | Adult | Child | | |
| | | Children and young people (3 months and over) first choice: trimethoprim (if low risk of resistance) OR nitrofurantoin (if eGFR \geq 45 ml/minute) | - | | | |
| | | Children and young people (3 months and over) second choice: nitrofurantoin (if eGFR \geq 45 ml/minute and not used as first choice) OR amoxicillin (only if culture results available and susceptible) OR Cefalexin | - |  | - | |

| Infection | Key points | Medicine | Doses | | Length | Visual summary |
|---|---|---|---|---|--------------|---|
| | | | Adult | Child | | |
| Acute pyelonephritis (upper urinary tract) NICE Last updated: Oct 2018 | Advise paracetamol (+/- low-dose weak opioid) for pain for people over 12. Offer an antibiotic. When prescribing antibiotics, take account of severity of symptoms, risk of complications, previous urine culture and susceptibility results, previous antibiotic use which may have led to resistant bacteria and local antimicrobial resistance data. <i>For detailed information click on the visual summary. See also the NICE guideline on urinary tract infection in under 16s: diagnosis and management and the Public Health England urinary tract infection: diagnostic tools for primary care.</i> | Non-pregnant women and men first choice: cefalexin OR | 500mg BD or TDS (up to 1g to 1.5g TDS or QDS for severe infections) | - | 7 to 10 days |  |
| | | co-amoxiclav (only if culture results available and susceptible) OR | 500/125mg TDS | - | 7 to 10 days | |
| | | trimethoprim (only if culture results available and susceptible) OR | 200mg BD | - | 14 days | |
| | | ciprofloxacin (consider safety issues) | 500mg BD | - | 7 days | |
| | | IV antibiotics (<i>click on visual summary</i>) | - | - | - | |
| | | Pregnant women first choice: cefalexin | 500mg BD or TDS (up to 1g to 1.5g TDS or QDS for severe infections) | - | 7 to 10 days | |
| | | Pregnant women second choice or IV antibiotics (<i>click on visual summary</i>) | - | - | - | |
| | | Children and young people (3 months and over) first choice: cefalexin OR | - |  | - | |
| | | co-amoxiclav (only if culture results available and susceptible) | - | - | - | |
| | | IV antibiotics (<i>click on visual summary</i>) | - | - | - | |

|--|--|--|--------------------------------|---|---|--|
| | | | Adult | Child | | |
| <i>Clostridium difficile</i> Public Health England Last updated: Oct 2018 | Review need for antibiotics, ^{1D,2D} PPIs, ^{3B-} and antiperistaltic agents and discontinue use where possible. ^{2D} Mild cases (<4 episodes of stool/day) may respond without metronidazole; ^{2D} 70% respond to metronidazole in 5 days; 92% respond to metronidazole in 14 days. ^{4B-} If severe (T>38.5, or WCC>15, rising creatinine, or signs/symptoms of severe colitis): ^{2D} treat with oral vancomycin, ^{1D,2D,5A-} review progress closely, ^{1D,2D} and consider hospital referral. ^{2D} | First episode: metronidazole ^{2D,4B-} | 400mg TDS ^{1D,2D} |  | 10 to 14 days ^{1D,4B-} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | Severe, type 027 or recurrent: oral vancomycin ^{1D,2D,5A-} | 125mg QDS ^{1D,2D,5A-} |  | 10 to 14 days, ^{1D,2D} then taper ^{2D} | |
| | | Recurrent or second line: fidaxomicin ^{2D,5A-} | 200mg BD ^{5A-} | - | 10 days ^{5A-} | |
| Traveller's diarrhoea Public Health England Last updated: Oct 2018 | Prophylaxis rarely, if ever, indicated. ^{1D} Consider standby antimicrobial only for patients at high risk of severe illness, ^{2D} or visiting high-risk areas. ^{1D,2D} | Standby: azithromycin | 500mg OD ^{1D,3A+} | - | 1 to 3 days ^{1D,2D,3A+} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | Prophylaxis/treatment: bismuth subsalicylate | 2 tablets QDS ^{1D,2D} | - | 2 days ^{1D,2D,4A-} | |
| Threadworm Public Health England Last updated: Nov 2017 | Treat all household contacts at the same time. ^{1D} Advise hygiene measures for 2 weeks ^{1D} (hand hygiene; ^{2D} pants at night; morning shower, including perianal area). ^{1D,2D} Wash sleepwear, bed linen, and dust and vacuum. ^{1D} Child <6 months , add perianal wet wiping or washes 3 hourly. ^{1D} | Child >6 months: mebendazole ^{1D,3B-} | 100mg stat ^{3B-} |  | 1 dose; ^{3B-} repeat in 2 weeks if persistent ^{3B-} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | Child <6 months or pregnant (at least in first trimester): only hygiene measure for 6 weeks ^{1D} | - | - | - | |
| ▼ Genital tract infections | | | | | | |
| STI screening Public Health England Last updated: Nov 2017 | People with risk factors should be screened for chlamydia, gonorrhoea, HIV and syphilis. ^{1D} Refer individual and partners to GUM. ^{1D} Risk factors: <25 years; no condom use; recent/frequent change of partner; symptomatic or infected partner; area of high HIV. ^{2B-} <i>Access the supporting evidence and rationales on the PHE website.</i> | | | | | |

| Infection | Key points | Medicine | Doses | | Length | Visual summary |
|---|--|--|--|---------------------|--|---|
| | | | Adult | Child | | |
| Epididymitis Public Health England Last updated: Nov 2017 | Usually due to Gram-negative enteric bacteria in men over 35 years with low risk of STI. ^{1A+,2D} If under 35 years or STI risk, refer to GUM. ^{1A+,2D} | Doxycycline ^{1A+,2D} OR | 100mg BD ^{1A+,2D} | - | 10 to 14 days ^{1A+,2D} | <i>Not available.</i> Access supporting evidence and rationales on the PHE website |
| | | ofloxacin ^{1A+,2D} OR | 200mg BD ^{1A+,2D} | | 14 days ^{1A+,2D} | |
| | | ciprofloxacin ^{1A+,2D} | 500mg BD ^{1A+,2D,3A+} | | 10 days ^{1A+,2D,3A+} | |
| Vaginal candidiasis Public Health England Last updated: Oct 2018 | All topical and oral azoles give over 80% cure. ^{1A+,2A+} Pregnant: avoid oral azoles, the 7 day courses are more effective than shorter ones. ^{1A+,3D,4A+} Recurrent (>4 episodes per year): ^{1A+} 150mg oral fluconazole every 72 hours for 3 doses induction, ^{1A+} followed by 1 dose once a week for 6 months maintenance. ^{1A+} | Clotrimazole ^{1A+,5D} OR | 500mg pessary ^{1A+} | - | Stat ^{1A+} | <i>Not available.</i> Access supporting evidence and rationales on the PHE website |
| | | fenticonazole ^{1A+} OR | 600mg pessary ^{1A+} | | Stat ^{1A+} | |
| | | clotrimazole ^{1A+} OR | 100mg pessary ^{1A+} | | 6 nights ^{1A+} | |
| | | oral fluconazole ^{1A+,3D} | 150mg ^{1A+,3D} | Stat ^{1A+} | | |
| | | If recurrent: fluconazole (induction/maintenance) ^{1A+} | 150mg every 72 hours THEN 150mg once a week ^{1A+,3D} | - | 3 doses 6 months ^{1A+} | |
| Bacterial vaginosis Public Health England Last updated: Nov 2017 | Oral metronidazole is as effective as topical treatment, ^{1A+} and is cheaper. ^{2D} 7 days results in fewer relapses than 2g stat at 4 weeks. ^{1A+,2D} Pregnant/breastfeeding: avoid 2g dose. ^{3A+,4D} Treating partners does not reduce relapse. ^{5A+} | Oral metronidazole ^{1A+,3A+} OR | 400mg BD ^{1A+,3A+} OR 2000mg ^{1A+,2D} | - | 7 days ^{1A+} OR Stat ^{2D} | <i>Not available.</i> Access supporting evidence and rationales on the PHE website |
| | | metronidazole 0.75% vaginal gel ^{1A+,2D,3A+} OR | 5g applicator at night ^{1A+,2D,3A+} | | 5 nights ^{1A+,2D,3A+} | |
| | | clindamycin 2% cream ^{1A+,2D} | 5g applicator at night ^{1A+,2D} | | 7 nights ^{1A+,2D,3A+} | |
| Genital herpes Public Health England Last updated: Nov 2017 | Advise: saline bathing, ^{1A+} analgesia, ^{1A+} or topical lidocaine for pain, ^{1A+} and discuss transmission. ^{1A+} First episode: treat within 5 days if new lesions or systemic symptoms, ^{1A+,2D} and refer to GUM. ^{2D} Recurrent: self-care if mild, ^{2D} or immediate short course antiviral treatment, ^{1A+,2D} or suppressive therapy if more than 6 episodes per year. ^{1A+,2D} | Oral aciclovir ^{1A+,2D,3A+,4A+} OR | 400mg TDS ^{1A+,3A+} 800mg TDS (if recurrent) ^{1A+} | - | 5 days ^{1A+} 2 days ^{1A+} | <i>Not available.</i> Access supporting evidence and rationales on the PHE website |
| | | valaciclovir ^{1A+,3A+,4A+} OR | 500mg BD ^{1A+} | | 5 days ^{1A+} | |
| | | | 250mg TD ^{1A+} | | 5 days ^{1A+} | |
| | | famciclovir ^{1A+,4A+} | 1000mg BD (if recurrent) ^{1A+} | | 1 day ^{1A+} | |

| Infection | Key points | Medicine | Doses | | Length | Visual summary |
|---|---|--|---|-------|--|---|
| | | | Adult | Child | | |
| Gonorrhoea Public Health England Last updated: Feb 2019 | Antibiotic resistance is now very high. ^{1D,2D} Use IM ceftriaxone if susceptibility not known prior to treatment ^{2D} . Use Ciprofloxacin only If susceptibility is known prior to treatment and the isolate is sensitive to ciprofloxacin at all sites of infection ^{1D,2D} Refer to GUM. ^{3B-} Test of cure is essential. ^{2D} | Ceftriaxone ^{2D} OR | 1000mg IM ^{2D} | - | Stat ^{2D} | <i>Not available.</i> Access supporting evidence and rationales on the PHE website |
| | | ciprofloxacin ^{2D} (only if known to be sensitive) | 500mg ^{2D} | - | Stat ^{2D} | |
| Trichomoniasis Public Health England Last updated: Nov 2017 | Oral treatment needed as extravaginal infection common. ^{1D} Treat partners, ^{1D} and refer to GUM for other STIs. ^{1D} Pregnant/breastfeeding: avoid 2g single dose metronidazole; ^{2A+,3D} clotrimazole for symptom relief (not cure) if metronidazole declined. ^{2A+,4A-,5D} | Metronidazole ^{1A+,2A+,3D,6A+} | 400mg BD ^{1A+,6A+} 2g (more adverse effects) ^{6A+} | - | 5 to 7 day ^{1A+} Stat ^{1A+,6A+} | <i>Not available.</i> Access supporting evidence and rationales on the PHE website |
| | | Pregnancy to treat symptoms: clotrimazole ^{2A+,4A-,5D} | 100mg pessary at night ^{5D} | - | 6 nights ^{5D} | |
| Pelvic inflammatory disease Public Health England Last updated: Feb 2019 | Refer women and sexual contacts to GUM. ^{1A+} Raised CRP supports diagnosis, absent pus cells in HVS smear good negative predictive value. ^{1A+} Exclude: ectopic pregnancy, appendicitis, endometriosis, UTI, irritable bowel, complicated ovarian cyst, functional pain. Moxifloxacin has greater activity against likely pathogens, but always test for gonorrhoea, chlamydia, and <i>M. genitalium</i> . ^{1A+} If <i>M. genitalium</i> tests positive use moxifloxacin. ^{1A+} | First line therapy: Ceftriaxone ^{1A+,3C,4C} PLUS | 1000mg IM ^{1A+,3C} | - | Stat ^{1A+,3C} | <i>Not available.</i> Access supporting evidence and rationales on the PHE website |
| | | metronidazole ^{1A+,5A+} PLUS | 400mg BD ^{1A+} | - | 14 days ^{1A+} | |
| | | doxycycline ^{1A+,5A+} | 100mg BD ^{1A+} | - | 14 days ^{1A+} | |
| | | Second line therapy: metronidazole ^{1A+,5A+} PLUS | 400mg BD ^{1A+} | - | 14 days ^{1A+} | |
| | | ofloxacin ^{1A+,2A-,5A+} OR | 400mg BD ^{1A+,2A-} | - | 14 days ^{1A+} | |
| | | moxifloxacin alone ^{1A+} (first line for <i>M. genitalium</i> associated PID) | 400mg OD ^{1A+} | - | 14 days ^{1A+} | |

|--|--|---|----------------------------------|---|--|--|
| | | | Adult | Child | | |
| ▼ Skin and soft tissue infections | | | | | | |
| <i>Note: Refer to RCGP Skin Infections online training.^{1D} For MRSA, discuss therapy with microbiologist.^{1D}</i> | | | | | | |
| Impetigo Public Health England Last updated: Nov 2017 | Reserve topical antibiotics for very localised lesions to reduce risk of bacteria becoming resistant. ^{1D,2B+} Only use mupirocin if caused by MRSA. ^{1D,3A+} Extensive, severe, or bullous: oral antibiotics. ^{4D} | Topical fusidic acid ^{2D,3A+} | Thinly TDS ^{4D} |  | 5 days ^{1D,2D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | If MRSA: topical mupirocin ^{3A+} | 2% ointment TDS ^{3A+} |  | 5 days ^{1D,2D,3A+} | |
| | | More severe: oral flucloxacillin ^{1D,3A+} OR | 250 to 500mg QDS ^{3A+} |  | 7 days ^{3A+} | |
| | | oral clarithromycin ^{1D,4D} | 250 to 500mg BD ^{1D,4D} |  | 7 days ^{4D} | |
| Cold sores Public Health England Last updated: Nov 2017 | Most resolve after 5 days without treatment. ^{1A-,2A-} Topical antivirals applied prodromally can reduce duration by 12 to 18 hours. ^{1A-,2A-,3A-} If frequent, severe, and predictable triggers: consider oral prophylaxis: ^{4D,5A+} aciclovir 400mg, twice daily, for 5 to 7 days. ^{5A+,6A+} <i>Access supporting evidence and rationales on the PHE website</i> | | | | | |
| PVL-SA Public Health England Last updated: Nov 2017 | Panton-Valentine leukocidin (PVL) is a toxin produced by 20.8 to 46% of <i>S. aureus</i> from boils/abscesses. ^{1B+,2B+,3B-} PVL strains are rare in healthy people, but severe. ^{2B+} Suppression therapy should only be started after primary infection has resolved, as ineffective if lesions are still leaking. ^{4D} Risk factors for PVL: recurrent skin infections; ^{2B+} invasive infections; ^{2B+} MSM; ^{3B-} if there is more than one case in a home or close community ^{2B+,3B-} (school children; ^{3B-} military personnel; ^{3B-} nursing home residents; ^{3B-} household contacts). ^{3B-} <i>Access the supporting evidence and rationales on the PHE website.</i> | | | | | |
| Eczema Public Health England Last updated: Nov 2017 | No visible signs of infection: antibiotic use (alone or with steroids) ^{1A+} encourages resistance and does not improve healing. ^{1A+} With visible signs of infection: use oral flucloxacillin ^{2D} or clarithromycin, ^{2D} or topical treatment (as in impetigo). ^{2D} <i>Access the supporting evidence and rationales on the PHE website.</i> | | | | | |
| Leg ulcer Public Health England Last updated: Feb 2019 | Ulcers are always colonised. ^{1C,2A+} Antibiotics do not improve healing unless active infection ^{2A+} (only consider if purulent exudate/odour; increased pain; cellulitis; pyrexia). ^{3D} | Flucloxacillin ^{5D} OR | 500mg QDS ^{5D} |  | 7 days | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | clarithromycin ^{5D} | 500mg BD ^{5D} |  | If slow response continue for another 7 days ^{5D} | |
| | | Non-healing ulcers: antimicrobial-reactive oxygen gel may reduce bacterial load. ^{6D,7B-} | | | | |

| Infection | Key points | Medicine | Doses | | Length | Visual summary |
|---|--|---|--|---|---|--|
| | | | Adult | Child | | |
| Acne Public Health England Last updated: Nov 2017 | Mild (open and closed comedones) ^{1D} or moderate (inflammatory lesions): ^{1D} First line: self-care ^{1D} (wash with mild soap; do not scrub; avoid make-up). ^{1D} Second line: topical retinoid or benzoyl peroxide. ^{2D} Third-line: add topical antibiotic, ^{1D,3A+} or consider addition of oral antibiotic. ^{1D} Severe (nodules and cysts): ^{1D} add oral antibiotic (for 3 months max) ^{1D,3A+} and refer. ^{1D,2D} | Second line: topical retinoid ^{1D,2D,3A+} OR | Thinly OD ^{3A+} |  | 6 to 8 weeks ^{1D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | benzoyl peroxide ^{1A-,2D,3A+,4A-} | 5% cream OD-BD ^{3A+} |  | 6 to 8 weeks ^{1D} | |
| | | Third-line: topical clindamycin ^{3A+} | 1% cream, thinly BD ^{3A+} |  | 12 weeks ^{1A-,2D} | |
| | | If treatment failure/severe: oral tetracycline ^{1A-,3A+} OR | 500mg BD ^{3A+} |  | 6 to 12 weeks ^{3A+} | |
| | | oral doxycycline ^{3A+,4A-} | 100mg OD ^{3A+} |  | 6 to 12 weeks ^{3A+} | |
| Cellulitis and erysipelas Public Health England Last updated: Oct 2018 | Class I: patient afebrile and healthy other than cellulitis, use oral flucloxacillin alone. ^{1D,2D,3A+} If river or sea water exposure: seek advice. ^{1D} Class II: patient febrile and ill, or comorbidity, admit for IV treatment, ^{1D} or use outpatient parenteral antimicrobial therapy. ^{1D} Class III: if toxic appearance, admit. ^{1D} Adding clindamycin does not improve outcomes ^{4B+} Erysipelas: often facial and unilateral. ^{5B+} Use flucloxacillin for non-facial erysipelas. ^{1D,2D,3A+} | Flucloxacillin ^{1D,2D,3A+} | 500mg QDS ^{1D,2D} |  | 7 days; ^{1D} if slow response, continue for a further 7 days ^{1D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | Penicillin allergy: clarithromycin ^{1D,2D,3A+,6A+} | 500mg BD ^{1D,2D} |  | | |
| | | Penicillin allergy and taking statins: doxycycline ^{2D} | 200mg stat then 100mg OD ^{2D} |  | | |
| | | Facial (non-dental): co-amoxiclav ^{7B-} | 500/125mg TDS ^{1D} |  | | |
| Bites Public Health England Last updated: July 2019 | Human: thorough irrigation is important. ^{1A+,2D} Antibiotic prophylaxis is advised. ^{1A+,2D,3D} Assess risk of tetanus, rabies, ^{1A+} HIV, and hepatitis B and C. ^{3D} Cat: always give prophylaxis. ^{1A+,3D} Dog: give prophylaxis if: puncture wound; ^{1A+,3D} bite to hand, foot, face, joint, tendon, or ligament; ^{1A+} immunocompromised; cirrhotic; asplenic; or presence of prosthetic valve/joint. ^{2D,4A+} Penicillin allergy: Review all at 24 and 48 hours, ^{3D} as not all pathogens are covered. ^{2D,3} | Prophylaxis/treatment all: co-amoxiclav ^{2D,3D} | 375mg to 625mg TDS ^{3D} |  | 7 days ^{3D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | Human + penicillin allergy: metronidazole ^{3D,4A+} AND | 400mg TDS ^{2D} |  | 7 days ^{3D} | |
| | | clarithromycin ^{3D,4A+} | 250mg to 500mg BD ^{2D} |  | | |
| | | Animal + penicillin allergy: metronidazole ^{3D,4A+} AND | 400mg TDS ^{2D} |  | 7 days ^{3D} | |
| doxycycline ^{3D} | 100mg BD ^{2D} | | | | | |

| Infection | Key points | Medicine | Doses | | Length | Visual summary |
|--|--|---|---|---|--|--|
| | | | Adult | Child | | |
| Scabies Public Health England Last updated: Oct 2018 | First choice permethrin: Treat whole body from ear/chin downwards, ^{1D,2D} and under nails. ^{1D,2D} If using permethrin and patient is under 2 years, elderly or immunosuppressed, or if treating with malathion: also treat face and scalp. ^{1D,2D} Home/sexual contacts: treat within 24 hours. ^{1D} | Permethrin ^{1D,2D,3A+} Permethrin allergy: malathion ^{1D} | 5% cream ^{1D,2D} 0.5% aqueous liquid ^{1D} |   | 2 applications, 1 week apart ^{1D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| Mastitis Public Health England Last updated: Nov 2017 | <i>S. aureus</i> is the most common infecting pathogen. ^{1D} Suspect if woman has: a painful breast; ^{2D} fever and/or general malaise; ^{2D} a tender, red breast. ^{2D} Breastfeeding: oral antibiotics are appropriate, where indicated. ^{2D,3A+} Women should continue feeding, ^{1D,2D} including from the affected breast. ^{2D} | Flucloxacillin ^{2D} Penicillin allergy: erythromycin ^{2D} OR clarithromycin ^{2D} | 500mg QDS ^{2D} 250mg to 500mg QDS ^{2D} 500mg BD ^{2D} | - | 10 to 14 days ^{2D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| Dermatophyte infection: skin Public Health England Last updated: Feb 2019 | Most cases: use terbinafine as fungicidal, treatment time shorter and more effective than with fungistatic imidazoles or undecenoates. ^{1D,2A+,4D} If candida possible, use imidazole. ^{4D} If intractable, or scalp: send skin scrapings, ^{1D} and if infection confirmed: use oral terbinafine ^{1D,3A+,4D} or itraconazole. ^{2A+,3A+,5D} Scalp: oral therapy, ^{6D} and discuss with specialist. ^{1D} | Topical terbinafine ^{3A+,4D} OR topical imidazole ^{2A+,3A+} Alternative in athlete's foot: topical undecenoates ^{2A+} (such as Mycota®) ^{2A+} | 1% OD to BD ^{2A+} 1% OD to BD ^{2A+} OD to BD ^{2A+} |    | 1 to 4 weeks ^{3A+} 4 to 6 weeks ^{2A+,3A+} | <i>Not available. | Tick bites (Lyme disease) Public Health England Last updated: Oct 2018 | Prophylaxis: ^{1A+} not routinely recommended in Europe. ^{2D} In pregnancy , consider amoxicillin. ^{2D} If immunocompromised , consider prophylactic doxycycline. ^{2D} Risk increased if high prevalence area and the longer tick is attached to the skin. ^{3D} Only give prophylaxis within 72 hours of tick removal. ^{1A+,2D,4A-} Give safety net advice about erythema migrans ^{2D} and other possible symptoms ^{2D} that may occur within 1 month of tick removal. ^{2D} | Prophylaxis: ^{1A+} doxycycline ^{2D,4A-,5D} | 200mg ^{2D,4A,5D} |  | Stat ^{2D,4A-,5D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | Treatment: Treat erythema migrans empirically ; serology is often negative early in infection. ^{3D} For other suspected Lyme disease such as neuroborreliosis (CN palsy, radiculopathy) seek advice. ^{3D} | Treatment: doxycycline ^{2D,3D,5D} First alternative: amoxicillin ^{2D,3D,5D} | 100mg BD ^{2D,3D,5D} |  | 21 days ^{2D,3D,5D} | |
| ▼ Eye infections | | | | | | |
| Conjunctivitis Public Health England Last updated: July 2019 | First line: bath/clean eyelids with cotton wool dipped in sterile saline or boiled (cooled) water, to remove crusting. ^{1D} Treat only if severe , ^{2A+} as most cases are viral ^{3D} or self-limiting. ^{2A+} Bacterial conjunctivitis: usually unilateral and also self-limiting. ^{2A+,3D} It is characterised by red eye with mucopurulent, not watery discharge. ^{3D} 65% and 74% resolve on placebo by days 5 and 7. ^{4A-,5A+} Third line: fusidic acid as it has less Gram-negative activity. ^{6A-,7D} | Second line: chloramphenicol ^{1D,2A+,4A-,5A+} 0.5% eye drop ^{1D,2A+} OR 1% ointment ^{1D,5A+} | Eye drops: 2 hourly for 2 days, ^{1D,2A+} then reduce frequency ^{1D} to 3 to 4 times daily. ^{1D} Eye ointment: 3 to 4 times daily or once daily at night if using antibiotic eye drops during the day. ^{1D} |  | 48 hours after resolution ^{2A+,7D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | Third line: fusidic acid 1% gel ^{2A+,5A+,6A-} | BD ^{1D,7D} |  | | |

| Infection | Key points | Medicine | Doses | | Length | Visual summary |
|--|--|---|---|--|--|--|
| | | | Adult | Child | | |
| Blepharitis Public Health England Last updated: Nov 2017 | First line: lid hygiene ^{1D,2A+} for symptom control, ^{1D} including: warm compresses; ^{1D,2A+} lid massage and scrubs; ^{1D} gentle washing; ^{1D} avoiding cosmetics. ^{1D} Second line: topical antibiotics if hygiene measures are ineffective after 2 weeks. ^{1D,3A+} Signs of meibomian gland dysfunction,^{3D} or acne rosacea:^{3D} consider oral antibiotics.^{1D} | Second line: topical chloramphenicol ^{1D,2A+,3A-} | 1% ointment BD ^{2A+,3D} |  | 6-week trial ^{3D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | Third line: oral oxytetracycline ^{1D,3D} OR | 500mg BD ^{3D} 250mg BD ^{3D} |  | 4 weeks (initial) ^{3D} 8 weeks (maint) ^{3D} | |
| | | oral doxycycline ^{1D,2A+,3D} | 100mg OD ^{3D} 50mg OD ^{3D} |  | 4 weeks (initial) ^{3D} 8 weeks (maint) ^{3D} | |
| ▼ Suspected dental infections in primary care (outside dental settings) | | | | | | |
| Derived from the Scottish Dental Clinical Effectiveness Programme (SDCEP) 2013 Guidelines. This guidance is not designed to be a definitive guide to oral conditions, as GPs should not be involved in dental treatment. Patients presenting to non-dental primary care services with dental problems should be directed to their regular dentist, or if this is not possible, to the NHS 111 service (in England), who will be able to provide details of how to access emergency dental care. | | | | | | |
| <i>Note: Antibiotics do not cure toothache.^{1D} First-line treatment is with paracetamol^{1D} and/or ibuprofen,^{1D} codeine is not effective for toothache.^{1D}</i> | | | | | | |
| Mucosal ulceration and inflammation (simple gingivitis) Public Health England Last updated: Nov 2017 | Temporary pain and swelling relief can be attained with saline mouthwash (½ tsp salt in warm water) ^{1D} . Use antiseptic mouthwash if more severe, ^{1D} and if pain limits oral hygiene to treat or prevent secondary infection. ^{1D,2A-} The primary cause for mucosal ulceration or inflammation (aphthous ulcers; ^{1D} oral lichen planus; ^{1D} herpes simplex infection; ^{1D} oral cancer) ^{1D} needs to be evaluated and treated. ^{1D} | Chlorhexidine 0.12 to 0.2% ^{1D, 2A-,3A+,4A+} (do not use within 30 minutes of toothpaste) ^{1D} OR | 1 minute BD with 10 ml ^{1D} |   | Always spit out after use. ^{1D} Use until lesions resolve ^{1D} or less pain allows for oral hygiene ^{1D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | hydrogen peroxide 6% ^{5A-, 1D} | 2 to 3 minutes BD/TDS with 15ml in ½ glass warm water ^{1D} |  | | |
| Acute necrotising ulcerative gingivitis Public Health England Last updated: Nov 2017 | Refer to dentist for scaling and hygiene advice. ^{1D,2D} Antiseptic mouthwash if pain limits oral hygiene. ^{1D} Commence metronidazole if systemic signs and symptoms. ^{1D,2D,3B-,4B+,5A-} | Chlorhexidine 0.12 to 0.2% (do not use within 30 minutes of toothpaste) ^{1D} OR | 1 minute BD with 10ml ^{1D} |  | Until pain allows for oral hygiene ^{6D} | <i>Not available. Access supporting evidence and rationales on the PHE website</i> |
| | | hydrogen peroxide 6% ^{1D} | 2 to 3 minutes BD/TDS with 15ml in ½ glass warm water |  | | |
| | | metronidazole ^{1D,3B-,4B+,5A-} | 400mg TDS ^{1D,2D} |  | 3 days ^{1D,2D} | |

|--|---|--|---|--|---|---|---|
| | | | Adult | Child | | | |
| Pericoronitis Public Health England Last updated: Nov 2017 | Refer to dentist for irrigation and debridement. ^{1D} If persistent swelling or systemic symptoms, ^{1D} use metronidazole ^{1D,2A+,3B+} or amoxicillin. ^{1D,3B+} Use antiseptic mouthwash if pain and trismus limit oral hygiene. ^{1D} | Metronidazole ^{1D,2A+,3B+} OR | 400mg TDS ^{1D} |  | 3 days ^{1D,2A+} | <i>Not available.</i> Access supporting evidence and rationales on the PHE website | |
| | | amoxicillin ^{1D,3B+} | 500mg TDS ^{1D} |  | 3 days ^{1D} | | |
| | | chlorhexidine 0.2% (do not use within 30 minutes of toothpaste) ^{1D} OR | 1 minute BD with 10ml ^{1D} |  | Until less pain allows for oral hygiene ^{1D} | | |
| | | hydrogen peroxide 6% ^{1D} | 2 to 3 minutes BD/TDS with 15ml in ½ glass warm water ^{1D} |  | | | |
| Dental abscess Public Health England Last updated: Oct 2018 | Regular analgesia should be the first option ^{1A+} until a dentist can be seen for urgent drainage, ^{1A+,2B-,3A+} as repeated courses of antibiotics for abscesses are not appropriate. ^{1A+,4A+} Repeated antibiotics alone, without drainage, are ineffective in preventing the spread of infection. ^{1A+,5C} Antibiotics are only recommended if there are signs of severe infection, ^{3A+} systemic symptoms, ^{1A+,2B-,4A+} or a high risk of complications. ^{1A+} Patients with severe odontogenic infections (cellulitis, ^{1A+,3A+} plus signs of sepsis; ^{3A+,4A+} difficulty in swallowing; ^{6D} impending airway obstruction) ^{6D} should be referred urgently for hospital admission to protect airway, ^{6D} for surgical drainage ^{3A+} and for IV antibiotics. ^{3A+} The empirical use of cephalosporins, ^{6D} co-amoxiclav, ^{6D} clarithromycin, ^{6D} and clindamycin ^{6D} do not offer any advantage for most dental patients, ^{6D} and should only be used if there is no response to first-line drugs. ^{6D} | If pus is present, refer for drainage, ^{1A+,2B-} tooth extraction, ^{2B-} or root canal. ^{2B-} Send pus for investigation. ^{1A+} If spreading infection ^{1A+} (lymph node involvement ^{1A+,4A+} or systemic signs, ^{1A+,2B-,4A+} that is, fever ^{1A+} or malaise) ^{4A+} ADD metronidazole. ^{6D,7B+} Use clarithromycin in true penicillin allergy ^{6D} and, if severe, refer to hospital. ^{3A+,6D} | Amoxicillin ^{6D,8B+,9C,10B+} OR | 500mg to 1000mg TDS ^{6D} |  | Up to 5 days; ^{6D,10B+} review at 3 days ^{9C,10B+} | <i>Not available.</i> Access supporting evidence and rationales on the PHE website |
