---

10th February 2025

## in weeks

---

2

## To which gender identity do you most identify?

## What other treatment options did you consider, and why did you choose this one?

---

My dysplasia is patchy and widespread. I have had EMR for this. Cryotherapy has recently been introduced to this unit, and it was suggested that I could try this as an alternative

---

RFA GIVEN JULY 2021 and failed had to have a stent put into my oesophagus so I could eat removed after 3 months . Cryoablation used

---

I was asked to be on a study to gain information regarding Balloon cryoablation.

---

only oother option was the hot option which would have been paniful, I didn't want that

## Did the procedure work?

If **somewhat or no**, please provide further details along with information about whether symptoms later reoccurred.

---

My dysphasia is widespread and patchy, and cannot be dealt with in one go, so I am having the procedure repeated every 3 months

---

ongoing - looking good so far

Did you have any side-effects following your procedure?

If **yes**, please provide further details along with information about whether symptoms later reoccurred.

---

oesophageal stricture, requiring dilatation. Referred oesophageal pain to my back. This effect was less of a problem compared to the EMR procedure

---

intrusive so sedation makes me feel giddy - some soreness - didn't need painkillers afterwards, odd twinge but milk helps

How long did it take you to recover from the procedure?

---

3 weeks for the pain to resolve

---

2 weeks of restricted eating no side effects

---

Not very long and only needed to take a small amount of tablets. I've had the halo 360 before and in my opinion the cryoablation is a much better procedure.

---

can go straight home - weak from no food or drink, so probs a day or two

How did the procedure positively affect your condition and/or your quality of life?  
Please consider things such as:

- Your physical symptoms
- Your ability to perform daily activities
- Your quality of life, lifestyle and/or social life
- Your state of mind, emotional health and/or wellbeing
- The effect on family, friends and others

---

Resolved swallowing issues and improved quality of life.

---

As my treatment is ongoing, I do not feel that I can answer this question

---

No physical effects A big positive effect on my emotional health and my wives

---

Physical symptoms normal for me. My ability to perform was only restricted by my sedation. Quality of life was normal. No change to my state of mind. The only effect on my family was me staying with them due to the sedation effect and not being on my own.

---

whole mental outlook has changed - having this option has been switching on a light - the other option was not for me. 100%

How did the procedure negatively affect your condition and/or your quality of life?  
Please consider things such as:

- Your physical symptoms
- Your ability to perform daily activities
- Your quality of life, lifestyle and/or social life
- Your state of mind, emotional health and/or wellbeing
- The effect on family, friends and others

---

Not applicable

---

Same as previous question

---

I've had several treatments with the cryoablation and had only very slight pain. This treatment has had no impact on my lifestyle, state of mind, wellbeing,daily activities or physical symptoms .

---

none

Did you require anymore treatment, including procedures or surgery after this procedure?

If **yes**, please provide further details.

---

Further treatment in April 2025

---

I am having the procedure done every 3 months, until the dysplasia has been eradicated

---

This is ongoing and will be monitored.

---

further treatment

Would you recommend this procedure to another patient with your condition?

If **yes**, what might you tell them?

---

Superb alternative to previous treatment.

---

Dysplastic areas might become malignant, and this procedure may help to reduce that likelihood. It is a tolerable procedure, but there may be some side effects, such as stricture formation, if the dysplasia is over a wide area. You may develop oesophageal pain, which will resolve, once the treated site has healed. It seems like the way forward

---

It was fast and painless

---

That I've had no real issues with this procedure.

---

I would tell them to have it - staff have been amazing - give the staff lots of chocolates to thank them. Depends on the staff but they have been incredible.

If the procedure had an impact on any other areas of your life that are not covered by the questions above please tell us about them here.

---

Nil

---

The banner flavour liquid to numb my throat. I think I have taken to dislike it.

---

Hope has affected everything for me - a huge wave of optimism.
