SEARCH STRATEGIES FOR THE IDENTIFICATION OF HEALTH ECONOMIC EVIDENCE

Scoping searches

A broad preliminary search of the literature was undertaken in August 2011 to obtain an overview of the issues likely to be covered by the scope, and to help define key areas. Searches were limited to full and partial economic evaluations, and quality of life studies.

- NHS Economic Evaluation Database (NHS EED) [Cochrane Library]
- Excerpta Medica Database (Embase)
- HTA database (technology assessments)
- Medical Literature Analysis and Retrieval System Online (MEDLINE/MEDLINE In-Process)

Further information about this process can be found in The Guidelines Manual (NICE, 2012).
Systematic search

Each search was constructed using the groups of terms set out in Text Box 1. The full set of search terms is documented in sections 1 to 3.1. The selection of search terms was kept broad to maximise retrieval of evidence in a wide range of areas of interest to the GDG.

Text Box 1: Summary of systematic search strategies: Search strategy construction

1.2 STEM - topic specific databases
HTA, CDSR, DARE, CENTRAL – Wiley

Version one

#1 mesh descriptor bipolar disorder explode all trees

(((bipolar or “bi polar”) near/5 (disorder* or depress*)) or
#2 ((cyclothymi* or rapid or ultradian) near/5 cycl*) or
hypomani* or mania* or manic* or “mixed episode*” or
rcbd):ti,ab,kw
#3 (#1 or #2)

Version two

#1 mesh descriptor **bipolar disorder** explode all trees
#2 mesh descriptor **mood disorders** this tree only

(((bipolar or “bi polar”) near/5 (disorder* or depress*)) or
((cyclothymi* or rapid or ultradian) near/5 cycl*) or
hypomani* or mania* or manic* or “mixed episode*” or
rcbd):ti,ab,kw

#4 ((affective* or mood) near/1 (disorder* or disturbance* or
illness* or swing*)).ti,ab.

#5 (#1 or #2 or #3 or #4)

2. Question specific search strategies - all databases

2.1 Case identification and assessment

Review questions:

RQ: For adults at risk of or suspected as having bipolar disorder, what identification instruments when compared to a gold standard diagnosis (based on DSM or ICD criteria) have adequate clinical utility (i.e. clinically useful with good sensitivity and specificity) and reliability?

RQ: For children (less than 13 years) and young people (13 to 18 years) at risk of or suspected of having bipolar disorder, what identification instruments when compared to a gold standard diagnosis (based on DSM or ICD criteria) have adequate clinical utility (i.e. clinically useful with good sensitivity and specificity) and reliability?

RQ: For people with possible bipolar disorder, what are the key components of, and the most effective structure for, diagnostic assessment?

What amendments, if any, need to be made for (i) particular cultural or minority ethnic groups, (ii) people of different genders, (iii) children and young people, (iv) older adults?
