

Heavy menstrual bleeding: Guideline Update

1 Background

Heavy menstrual bleeding guideline (CG44) was reviewed in 2015 as part of NICE's routine surveillance programme to decide whether the guideline requires updating.

2 Surveillance programme findings

The surveillance programme identified new evidence on progesterone-receptor modulators (specifically mifepristone and ulipristal acetate). The full report can be found [here](#).

3 Guideline Update

We are answering the following question(s):

- What is the clinical and cost effectiveness of medical treatment with progesterone receptor modulators for fibroids greater than 3cm in diameter?'

4 Guideline Update process

The guideline update will be produced using a standing Committee. NICE are piloting the use of a standing Committee for guideline updates. More information about the pilot can be found here:

[Guideline Updates](#)

Committee meeting date: 23 November 2015

Consultation dates: 7 January 2016 – 4 February 2016

Expected publication date: 13 April 2016
