Early submission

Neonatal Parenteral Nutrition

Review questions

NICE guideline tbc Review questions July 2019

Early submission

Developed by National Guideline Alliance which is part of the Royal College of Obstetricians and Gynaecologists

Disclaimer

The recommendations in this guideline represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, professionals are expected to take this guideline fully into account, alongside the individual needs, preferences and values of their patients or service users. The recommendations in this guideline are not mandatory and the guideline does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and/or their carer or guardian.

Local commissioners and/or providers have a responsibility to enable the guideline to be applied when individual health professionals and their patients or service users wish to use it. They should do so in the context of local and national priorities for funding and developing services, and in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities. Nothing in this guideline should be interpreted in a way that would be inconsistent with compliance with those duties.

NICE guidelines cover health and care in England. Decisions on how they apply in other UK countries are made by ministers in the <u>Welsh Government</u>, <u>Scottish Government</u>, and <u>Northern Ireland Executive</u>. All NICE guidance is subject to regular review and may be updated or withdrawn.

| 3.1 D2 What is the optimal target dosage for amino acids in preterm and term babies who are receiving parenteral nutrition and neonatal care? 3.2 What is the optimal way (starting dose and approach to increment, if employed) to achieve this target dosage for amino acids? 3.3 D1 What is the optimal target dosage for carbohydrates in preterm and term babies who are receiving parenteral nutrition and neonatal care? 3.4 What is the optimal way (starting dose and approach to increment, if employed) to achieve this target dosage for carbohydrates? 3.5 D3 What is the optimal way (starting dose and approach to increment, if employed) to achieve this target dosage for carbohydrates? 3.6 What is the optimal way (starting dose and approach to increment, if employed) to achieve this? 3.6 What is the optimal way (starting dose and approach to increment, if employed) to achieve that? 3.7 D4 What is the clinical effectiveness, efficacy and safety of lipid formulations from different sources (for example, soya, fish oil, or mixed sources)? 3.8 D9 What are the optimal target dosage for solution and neonatal care? 3.9 D10 What is the optimal ratio of phosphate to amino acid in preterm and term babies who are receiving parenteral nutrition and neonatal care? 3.10 D5 What is the effectiveness, efficacy and safety of standardised parenteral nutrition and neonatal care? | 1.4 | D8 | |
| and term babies who are receiving parenteral nutrition and neonatal care? 3.2 What is the optimal way (starting dose and approach to increment, if employed) to achieve this target dosage for amino acids? 3.3 D1 What is the optimal target dosage for carbohydrates in preterm and term babies who are receiving parenteral nutrition and neonatal care? 3.4 What is the optimal target for lipid dosage in preterm and term babies who are receiving parenteral nutrition and neonatal care? 3.5 D3 What is the optimal target for lipid dosage in preterm and term babies who are receiving parenteral nutrition and neonatal care? 3.6 What is the optimal way (starting dose and approach to increment, if employed) to achieve that? 3.6 What is the optimal way (starting dose and approach to increment, if employed) to achieve that? 3.7 D4 What is the optimal way (starting dose and approach to increment, if employed) to achieve that? 3.7 D4 What is the optimal target dosages for calcium and phosphate in preterm and term babies who are receiving parenteral nutrition and neonatal care? 3.9 D10 What is the optimal target dosages for calcium and neonatal care? 3.10 D5 What is the optimal target dosage for unino acid in preterm and term babies who are receiving parenteral nutrition and neonatal care? 3.11 D6 How much (if any) intravenous acetate should be provided to preterm and te | 2.1 | С | |
| increment, if employed) to achieve this target dosage for amino acids?3.3D1What is the optimal target dosage for carbohydrates in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.4What is the optimal way (starting dose and approach to increment, if employed) to achieve this target dosage for carbohydrates?3.5D3What is the optimal target for lipid dosage in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.6What is the optimal way (starting dose and approach to increment, if employed) to achieve that?3.7D4What is the optimal way (starting dose and approach to increment, if employed) to achieve that?3.8D9What is the clinical effectiveness, efficacy and safety of lipid formulations from different sources (for example, soya, fish oil, or mixed sources)?3.8D9What are the optimal target dosages for calcium and phosphate in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.9D10What is the most effective and safe in suplementation compared to no iron or different dosage/formulations in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.10D5What is the effectiveness, efficacy and safety of standardised parenteral nutrition and neonatal care?3.12EWhat is the effectiveness, efficacy and safety of standardised parenteral nutrition and neonatal care?3.12BWhat is the effectiveness, efficacy and safety of standardised parenteral nutrition and neonatal care?3.12BWhat overall osmolality, (c | 3.1 | D2 | and term babies who are receiving parenteral nutrition and |
| and term babies who are receiving parenteral nutrition and neonatal care?3.4What is the optimal way (starting dose and approach to increment, if employed) to achieve this target dosage for carbohydrates?3.5D3What is the optimal target for lipid dosage in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.6What is the optimal way (starting dose and approach to increment, if employed) to achieve that?3.7D4What is the optimal way (starting dose and approach to increment, if employed) to achieve that?3.7D4What is the optimal way (starting dose and approach to increment, if employed) to achieve that?3.8D9What is the optimal target dosages for calcium and phosphate in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.9D10What is the optimal ratio of phosphate to amino acid in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.10D5What is the most effective and safe iron supplementation compared to no iron or different dosage/formulations in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.12EWhat is the effectiveness, efficacy and safety of standardised parenteral nutrition bags compared with individualised bags?4.1BWhat overall osmolality, (concentration of calcium and glucose/dextrose) in parenteral nutrition can determine | 3.2 | | increment, if employed) to achieve this target dosage for |
| increment, if employed) to achieve this target dosage for carbohydrates?3.5D3What is the optimal target for lipid dosage in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.6What is the optimal way (starting dose and approach to increment, if employed) to achieve that?3.7D4What is the clinical effectiveness, efficacy and safety of lipid formulations from different sources (for example, soya, fish oil, or mixed sources)?3.8D9What are the optimal target dosages for calcium and phosphate in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.9D10What is the optimal ratio of phosphate to amino acid in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.10D5What is the most effective and safe iron supplementation compared to no iron or different dosage/formulations in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.11D6How much (if any) intravenous acetate should be provided to preterm and term babies who are receiving parenteral nutrition and neonatal care?3.12EWhat is the effectiveness, efficacy and safety of standardised parenteral nutrition bags compared with individualised bags?4.1BWhat overall osmolality, (concentration of calcium and plucose/dextrose) in parenteral nutrition can determine | 3.3 | D1 | and term babies who are receiving parenteral nutrition and |
| babies who are receiving parenteral nutrition and neonatal care?3.6What is the optimal way (starting dose and approach to increment, if employed) to achieve that?3.7D4What is the clinical effectiveness, efficacy and safety of lipid formulations from different sources (for example, soya, fish oil, or mixed sources)?3.8D9What are the optimal target dosages for calcium and phosphate in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.9D10What is the optimal ratio of phosphate to amino acid in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.10D5What is the most effective and safe iron supplementation compared to no iron or different dosage/formulations in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.11D6How much (if any) intravenous acetate should be provided to preterm and term babies who are receiving parenteral nutrition and neonatal care?3.12EWhat is the effectiveness, efficacy and safety of standardised parenteral nutrition bags compared with individualised bags?4.1BWhat overall osmolality, (concentration of calcium and glucose/dextrose) in parenteral nutrition can determine | 3.4 | | increment, if employed) to achieve this target dosage for |
| increment, if employed) to achieve that?3.7D4What is the clinical effectiveness, efficacy and safety of lipid formulations from different sources (for example, soya, fish oil, or mixed sources)?3.8D9What are the optimal target dosages for calcium and phosphate in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.9D10What is the optimal ratio of phosphate to amino acid in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.10D5What is the most effective and safe iron supplementation compared to no iron or different dosage/formulations in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.11D6How much (if any) intravenous acetate should be provided to preterm and term babies who are receiving parenteral nutrition and neonatal care?3.12EWhat is the effectiveness, efficacy and safety of standardised parenteral nutrition bags compared with individualised bags?4.1BWhat overall osmolality, (concentration of calcium and glucose/dextrose) in parenteral nutrition can determine | 3.5 | D3 | babies who are receiving parenteral nutrition and neonatal |
| formulations from different sources (for example, soya, fish oil, or mixed sources)?3.8D9What are the optimal target dosages for calcium and phosphate in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.9D10What is the optimal ratio of phosphate to amino acid in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.10D5What is the optimal ratio of phosphate to amino acid in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.10D5What is the most effective and safe iron supplementation compared to no iron or different dosage/formulations in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.11D6How much (if any) intravenous acetate should be provided to preterm and term babies who are receiving parenteral nutrition and neonatal care?3.12EWhat is the effectiveness, efficacy and safety of standardised parenteral nutrition bags compared with individualised bags?4.1BWhat overall osmolality, (concentration of calcium and glucose/dextrose) in parenteral nutrition can determine | 3.6 | | |
| phosphate in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.9D10What is the optimal ratio of phosphate to amino acid in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.10D5What is the most effective and safe iron supplementation compared to no iron or different dosage/formulations in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.11D6How much (if any) intravenous acetate should be provided to preterm and term babies who are receiving parenteral nutrition and neonatal care?3.12EWhat is the effectiveness, efficacy and safety of standardised parenteral nutrition bags compared with individualised bags?4.1BWhat overall osmolality, (concentration of calcium and glucose/dextrose) in parenteral nutrition can determine | 3.7 | D4 | formulations from different sources (for example, soya, fish oil, |
| and term babies who are receiving parenteral nutrition and neonatal care?3.10D5What is the most effective and safe iron supplementation compared to no iron or different dosage/formulations in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.11D6How much (if any) intravenous acetate should be provided to preterm and term babies who are receiving parenteral nutrition and neonatal care?3.12EWhat is the effectiveness, efficacy and safety of standardised parenteral nutrition bags compared with individualised bags?4.1BWhat overall osmolality, (concentration of calcium and glucose/dextrose) in parenteral nutrition can determine | 3.8 | D9 | phosphate in preterm and term babies who are receiving |
| compared to no iron or different dosage/formulations in preterm and term babies who are receiving parenteral nutrition and neonatal care?3.11D6How much (if any) intravenous acetate should be provided to preterm and term babies who are receiving parenteral nutrition and neonatal care?3.12EWhat is the effectiveness, efficacy and safety of standardised parenteral nutrition bags compared with individualised bags?4.1BWhat overall osmolality, (concentration of calcium and glucose/dextrose) in parenteral nutrition can determine | 3.9 | D10 | and term babies who are receiving parenteral nutrition and |
| preterm and term babies who are receiving parenteral nutrition and neonatal care?3.12EWhat is the effectiveness, efficacy and safety of standardised parenteral nutrition bags compared with individualised bags?4.1BWhat overall osmolality, (concentration of calcium and glucose/dextrose) in parenteral nutrition can determine | 3.10 | D5 | compared to no iron or different dosage/formulations in preterm and term babies who are receiving parenteral nutrition |
| 4.1BWhat overall osmolality, (concentration of calcium and glucose/dextrose) in parenteral nutrition can determine | 3.11 | D6 | preterm and term babies who are receiving parenteral nutrition |
| glucose/dextrose) in parenteral nutrition can determine | 3.12 | E | |
| whether to administer centrally or peripricially? | 4.1 | В | |

| Number in the scope | Alphanumeric document number when published | Review questions |
|---------------------|---|--|
| 5.1 | F | In babies on parenteral nutrition, what is the optimal frequency of blood sampling and monitoring of glucose, calcium, phosphate, potassium, and serum triglycerides? |
| 6.2 | G | What amount of enteral feed (measured in terms of ml/kg/d, or kcal/kg/d, or ratios in relation to parenteral nutrition and enteral feeds) indicates that parenteral nutrition is no longer required? |
| 7.1 | Н | Are nutrition care/support teams effective in providing parenteral nutrition in preterm and term babies? |
| 8.1 | 1 | What are the most effective methods of information provision about parenteral nutrition, and what information and support about this do parents or carers perceive as useful? |
| 9.1 | J | What are the general principles of neonatal parenteral nutrition for preterm and term babies? |
