

HTG225 Percutaneous mitral valve annuloplasty

SNOMED CT provides clinical terms for entry into the patient record to record clinical information relevant to that encounter; the mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

Procedure and device:

SNOMED CT preferred term (concept ID)

Repair of mitral valve using fluoroscopic guidance (432394003)

OPCS-4 code(s):

K34.1 Annuloplasty of mitral valve

Y76.8 Other specified minimal access to other body cavity

Y53.4 Approach to organ under fluoroscopic control

U20.2 Transoesophageal echocardiography (*if carried out*)

Diagnosis or health condition:

SNOMED CT preferred term (concept ID)

Mitral valve regurgitation (48724000)

ICD-10 code(s):

I34.0 Mitral (valve) insufficiency

Or

I02.0 Rheumatic chorea with heart involvement

Or

I05.1 Rheumatic mitral insufficiency

Or

I05.2 Mitral stenosis with insufficiency

Or

I08.0 Disorders of both mitral and aortic valves

Or

I08.1 Disorders of both mitral and tricuspid valves

Or

I08.3 Combined disorders of mitral, aortic and tricuspid valves

Or

Q23.3 Congenital mitral insufficiency

Clinical coding recommendations for NICE guidance

For each published interventional procedure and medical technologies guidance, we work with NHS Digital to provide relevant clinical coding information.

SNOMED CT provides clinical terms for entry into the patient record to store clinical information relevant to that encounter.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS Digital Information Representation Services work collaboratively to ensure the most appropriate SNOMED CT, OPCS-4 and ICD codes are provided.

NHS Digital is the national release centre for the UK edition of SNOMED CT, ICD and OPCS-4. Further SNOMED CT information including licensing, see [here](#). Further Classifications information, see [here](#).
