

HTG36 - Laser sheath removal of pacing leads

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

Procedure:

OPCS-4 code(s):

K60.4 Removal of intravenous cardiac pacemaker system

Y08.4 Laser destruction of lesion of organ NOC

Y53.1 Approach to organ under radiological control (if used)

Or

K61.4 Removal of cardiac pacemaker system NEC

Y08.4 Laser destruction of lesion of organ NOC

Y53.1 Approach to organ under radiological control (if used)

Note: Codes in category **Y53 Approach to organ under image control** and **Y68 Other approach to organ under image control** are used as additional codes for any procedure that uses image control that may or may not be performed via percutaneous approach.

Note: When a procedure has been performed using image control and the code that classifies the procedure **does not** state the type of image control used, then a code from these categories **must be** assigned. If the specific method of image control is not stated, the fourth-character **.9** must be assigned.

Diagnosis or health condition:

ICD-10 code(s):

An ICD-10 code to classify the condition for which the leads are being removed is assigned. In the absence of a specific condition the following code must be assigned:

Z95.0 Presence of electronic cardiac devices

Clinical coding recommendations for NICE guidance

For each published interventional procedure guidance, we work with NHS England to provide relevant clinical coding information.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS England Terminology and Classifications Delivery Service work collaboratively to ensure the most appropriate OPCS-4 and ICD-10 codes are provided.

NHS England is the national release centre for the UK edition of ICD-10 and OPCS-4. Further Classifications information, see [here](#).
