

## HTG376 - Ultrasound-enhanced, catheter-directed thrombolysis for pulmonary embolism

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

### Procedure:

#### OPCS- 4 codes:

**L71.6 Percutaneous transluminal thrombolysis of artery**

**Y13.5 Ultrasonic destruction of lesion of organ NOC**

**Y53.- Approach to organ under image control**

Or

**Y68.- Other approach to organ under image control**

**Z40.1 Pulmonary artery**

**Note:** Codes in category **Y53 Approach to organ under image control** and **Y68 Other approach to organ under image control** are used as additional codes for any procedure that uses image control that may or may not be performed via percutaneous approach.

**Note:** When a procedure has been performed using image control and the code that classifies the procedure does not state the type of image control used, then a code from these categories must be assigned. If the specific method of image control is not stated, the fourth-character **.9** must be assigned.

### Diagnosis or health condition:

#### ICD-10 code(s):

**I26.- Pulmonary embolism**

---

## **Clinical coding recommendations for NICE guidance**

For each published interventional procedure guidance, we work with NHS England to provide relevant clinical coding information.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS England Terminology and Classifications Delivery Service work collaboratively to ensure the most appropriate OPCS-4 and ICD-10 codes are provided.

NHS England is the national release centre for the UK edition of ICD-10 and OPCS-4. Further Classifications information, see [here](#).
