# HTG443 Infracoccygeal sacropexy using mesh for uterine prolapse repair

SNOMED CT provides clinical terms for entry into the patient record to record clinical information relevant to that encounter; the mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

## Procedure and device:

**SNOMED CT preferred term (concept ID)**

Infracoccygeal sacropexy using mesh (844201000000108)

**OPCS-4 code(s):**

> **Q54.6 Infracoccygeal hysteropexy**

> **Y28.4 Insertion of mesh into organ NOC**

Or

> **Y28.1 Insertion of synthetic mesh into organ NOC**

Or

> **Y28.2 Insertion of biological mesh into organ NOC**

Or

> **Y28.3 Insertion of composite mesh into organ NOC**

## Diagnosis or health condition:

**SNOMED CT preferred term (concept ID)**

Uterine prolapse (24976005)

**ICD-10 code(s):**

> **N81.2 Incomplete uterovaginal prolapse**

> **N81.3 Complete uterovaginal prolapse**

> **N81.4 Uterovaginal prolapse, unspecified**

> **Q51.8 Other congenital malformation of uterus and cervix**

## Clinical coding recommendations for NICE guidance

For each published interventional procedure and medical technologies guidance, we work with NHS Digital to provide relevant clinical coding information.

SNOMED CT provides clinical terms for entry into the patient record to store clinical information relevant to that encounter.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS Digital Information Representation Services work collaboratively to ensure the most appropriate SNOMED CT, OPCS-4 and ICD codes are provided.

NHS Digital is the national release centre for the UK edition of SNOMED CT, ICD and OPCS-4.  Further SNOMED CT information including licensing, see here.  Further Classifications information, see here.
