

HTG461 - Aortic valve reconstruction with processed bovine pericardium

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

Procedure:

OPCS-4 code(s):

K26.2 Xenograft replacement of aortic valve

Y73.1 Cardiopulmonary bypass

Where the function of the valve is assessed intraoperatively using transoesophageal echocardiography the following codes are assigned in addition:

U20.2 Transoesophageal echocardiography

Y97.- Radiology with contrast (if contrast is used)

Y98.1 Radiology of one body area (or < 20 minutes)

Diagnosis or health condition:

ICD-10 code(s):

The relevant ICD-10 code to classify the aortic valve disease must be assigned.

Clinical coding recommendations for NICE guidance

For each published interventional procedure guidance, we work with NHS England to provide relevant clinical coding information.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS England Terminology and Classifications Delivery Service work collaboratively to ensure the most appropriate OPCS-4 and ICD-10 codes are provided.

NHS England is the national release centre for the UK edition of ICD-10 and OPCS-4. Further Classifications information, see [here](#).
