

HTG520 - Cardiac contractility modulation device implantation for heart failure

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

Procedure:

OPCS-4 code(s):

K57.8 Other specified other therapeutic transluminal operations on heart

Y02.1 Implantation of prosthesis into organ NOC

Y53.- Approach to organ under image control (if image control is used)

Or

Y68.- Other approach to organ under image control

Z33.2 Septum of ventricle of heart

Z33.6 Atrium of heart (must only be assigned where leads are implanted into the right atrium – usually the atrial appendage)

Z94.2 Right sided operation

Note: Codes in category **Y53 Approach to organ under image control** and **Y68 Other approach to organ under image control** are used as additional codes for any procedure that uses image control that may or may not be performed via percutaneous approach.

Notte: When a procedure has been performed using image control and the code that classifies the procedure does not state the type of image control used, then a code from these categories ***must be*** assigned. If the specific method of image control is not stated, the fourth-character **.9** must be assigned.

Diagnosis or health condition:

ICD-10 code(s):

I50.9 Heart failure, unspecified

Or

I50.0 Congestive heart failure

Clinical coding recommendations for NICE guidance

For each published interventional procedure guidance, we work with NHS England to provide relevant clinical coding information.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS England Terminology and Classifications Delivery Service work collaboratively to ensure the most appropriate OPCS-4 and ICD-10 codes are provided.

NHS England is the national release centre for the UK edition of ICD-10 and OPCS-4. Further Classifications information, see [here](#).
