

# Transcatheter tricuspid valve leaflet repair for tricuspid regurgitation

Information for the public

Published: 27 July 2022

[www.nice.org.uk](https://www.nice.org.uk)

For people with severe and symptomatic tricuspid regurgitation, this procedure can only be done with special arrangements. This means you'll have regular appointments after the procedure to check how well it's working or whether it has caused problems. This is because there's not enough evidence about how well this procedure works in this group, and it can cause complications.

For people with mild or moderate tricuspid regurgitation, this procedure can only be done as part of a research study. This is because there's not enough evidence to be sure how well it works or how safe it is in this group. Your healthcare professional should talk to you about the research.

The tricuspid valve is a heart valve made up of 3 leaflets (flaps). Tricuspid regurgitation happens when the valve does not close properly, and blood flows the wrong way in the heart. This makes the heart work harder and, if severe, can lead to heart failure. In this procedure, a device is inserted into a vein in the groin or neck (transcatheter) and placed on the valve in the heart to bring the valve leaflets together. The aim is to reduce the severity of the leak and enable the heart to pump more efficiently, improving symptoms and quality of life.

## Is this procedure right for me?

You should be included in [making decisions about your care](#).

Your healthcare professionals should explain the risks and benefits of this procedure and how it is done. They should discuss your options and listen carefully to your views and concerns. They should offer you more information about the procedure. Your family or carers can be involved if you want or need them to be.

You will be asked to decide whether you agree (consent) to have the procedure. Find out more about [giving consent to treatment on the NHS website](#).

## Some questions to think about

- How many appointments will I need?
- What are the possible benefits? How likely am I to get them?
- What are the risks or side effects? How likely are they?
- Will I have to stay in hospital?
- What happens if it does not work or something goes wrong?
- What happens if I do not want the procedure?
- Are other treatments available?

## Information and support

- [NICE's information on HealthTech guidance](#) explains what HealthTech is and how we assess it.
- [NICE's information on HealthTech recommendations](#) explains what special arrangements are and what only in research means.

You can also get support from your local [Healthwatch](#).
