

HTG731 Endoscopic bipolar radiofrequency ablation for malignant biliary obstruction

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

Procedure:

OPCS-4 code(s):

J41.8 Other specified other therapeutic endoscopic retrograde operations on bile duct

Y13.4 Radiofrequency controlled thermal destruction of lesion of organ NOC

Z30.3 Common bile duct

Or

Z30.4 Bile duct NEC

Or

Z30.8 Specified biliary tract NEC

Or

Z30.9 Biliary tract NEC

When performed on pancreatic duct:

J42.8 Other specified therapeutic endoscopic retrograde operations on pancreatic duct

Y13.4 Radiofrequency controlled thermal destruction of lesion of organ NOC

Z31.2 Pancreatic duct

Note: If a stent is inserted during the procedure this would also be coded by assigning a code from category **Y14 Placement of stent in organ NOC** after code **Y13.4**.

Diagnosis or health condition:

ICD-10 code(s):

K83.1 Obstruction of bile duct

Or

C22.0 Liver cell carcinoma

Or

C22.1 Intrahepatic bile duct carcinoma

Or

C25.- Malignant neoplasm of pancreas

Or

C78.7 Secondary malignant neoplasm of liver and intrahepatic bile duct

Clinical coding recommendations for NICE guidance

For each published interventional procedure guidance, we work with NHS England to provide relevant clinical coding information.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS England Terminology and Classifications Delivery Service work collaboratively to ensure the most appropriate OPCS-4 and ICD-10 codes are provided.

NHS England is the national release centre for the UK edition of ICD-10 and OPCS-4. Further Classifications information, see [here](#).
