

IPG132 Low dose rate brachytherapy for localised prostate cancer

SNOMED CT provides clinical terms for entry into the patient record to record clinical information relevant to that encounter; the mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

Procedure and device:

SNOMED CT preferred term (concept ID)

OPCS-4 code(s):

M70.6 Radioactive seed implantation into prostate

Note: Use an additional code to specify radiotherapy delivery (X65)

X65.3 Delivery of a fraction of interstitial radiotherapy

Note: Use a subsidiary code to identify introduction of radioactive material (Y35, Y36)

Y36.3 Radioactive seed implantation NOC

Y89.8 Other specified brachytherapy

Y53.2 Approach to organ under ultrasonic control

Diagnosis or health condition:

SNOMED CT preferred term (concept ID)

ICD-10 code(s):

C61.X Malignant neoplasm of prostate

or

C79.8 Secondary malignant neoplasm of other specified sites

Clinical coding recommendations for NICE guidance

For each published interventional procedure and medical technologies guidance, we work with NHS Digital to provide relevant clinical coding information.

SNOMED CT provides clinical terms for entry into the patient record to store clinical information relevant to that encounter.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS Digital Information Representation Services work collaboratively to ensure the most appropriate SNOMED CT, OPCS-4 and ICD codes are provided.

NHS Digital is the national release centre for the UK edition of SNOMED CT, ICD and OPCS-4. Further SNOMED CT information including licensing, see [here](#). Further Classifications information, see [here](#).
