

## IPG466 - Photochemical corneal collagen cross-linkage using riboflavin and ultraviolet A for keratoconus and keratectasia

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

### Procedure:

#### OPCS-4 code(s):

**C51.8 Other specified other operations on cornea**

**Y37.1 Introduction of photodynamic substance into organ NOC**

### Diagnosis or health condition:

#### ICD-10 code(s):

**H18.6 Keratoconus**

Or

**H18.7 Other corneal deformities**

Or

**Q13.4 Other congenital corneal malformations**

Or a combination of the following two codes:

**Q90.-D Down syndrome**

**H19.8A Other disorders of sclera and cornea in diseases classified elsewhere**

**Note:** In the dagger and asterisk system used above, the code that reflects the main condition treated or investigated during the consultant episode must be sequenced in the primary position (**see DGCS.1: Primary diagnosis**).

## **Clinical coding recommendations for NICE guidance**

For each published interventional procedure guidance, we work with NHS England to provide relevant clinical coding information.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS England Terminology and Classifications Delivery Service work collaboratively to ensure the most appropriate OPCS-4 and ICD-10 codes are provided.

NHS England is the national release centre for the UK edition of ICD-10 and OPCS-4. Further Classifications information, see [here](#).
