110.	organisation			Please respond to all comments
1	Consultee 1 Researcher	4	Dear Sir/Madam	Thank you for your comment and for sending your publication to NICE.
			In relation to the NICE consultation regarding joint distraction for ankle osteoarthritis and joint distraction for knee osteoarthritis without alignment correction, please find attached our most recent publication which highlights one potential mechanism in the treatment success using this technique.	The Baboolal (2015) study aims to explain the mechanism of action of knee joint distraction. The paper does not assess the efficacy or the safety of ankle joint distraction; therefore it has not been included in the overview.

[&]quot;Comments received in the course of consultations carried out by NICE are published in the interests of openness and transparency, and to promote understanding of how recommendations are developed. The comments are published as a record of the submissions that NICE has received, and are not endorsed by NICE, its officers or advisory committees."
