

IPG56 – Complete cytoreduction for pseudomyxoma peritonei (Sugarbaker technique)

SNOMED CT provides clinical terms for entry into the patient record to record clinical information relevant to that encounter; the mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

Procedure and device:

SNOMED CT preferred term (concept ID)

Interventional debulking surgery (303577009)

Hyperthermic intraoperative peritoneal chemotherapy (819971000000103)

Postoperative administration of antineoplastic agent into peritoneal cavity (700496000)

Postoperative chemotherapy (394895009)

OPCS-4 code(s):

This procedure cannot be expressed in the OPCS-4 classification by a single code. The current guidance would be to code each organ removed as per normal coding rules, and to combine this with the ICD-10 diagnosis code **C78.6 Secondary malignant neoplasm of retroperitoneum and peritoneum**.

For the intraperitoneal chemotherapy the following OPCS-4.5 codes are assigned:

T48.2 Introduction of cytotoxic substance into peritoneal cavity plus a code from categories **X70-X71 Procurement of drugs for chemotherapy for neoplasm in Bands 1-10** dependent on the regimen prescribed.

Diagnosis or health condition:

SNOMED CT preferred term (concept ID)

Pseudomyxoma peritonei (307601000)

ICD-10 code(s):

C78.6 Secondary malignant neoplasm of retroperitoneum and peritoneum

Clinical coding recommendations for NICE guidance

For each published interventional procedure and medical technologies guidance, we work with the Health and Social Care Information Centre (HSCIC) to provide relevant clinical coding information.

SNOMED CT provides clinical terms for entry into the patient record to store clinical information relevant to that encounter.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

The UK Edition of SNOMED CT is managed by the Clinical Terminology Service of the Health and Social Care Information Centre. For further information including licensing, see [UK Terminology Centre — Health and Social Care Information Centre](#)

The Clinical Classifications Service of the Health and Social Care Information Centre is the central definitive source for clinical coding guidance and determines the coding standards associated with the classifications (OPCS-4 and ICD-10) to be used across the NHS. The Clinical Classifications Service and NICE work collaboratively to ensure the most appropriate classification codes are provided.
