

Alpha-Stim AID for anxiety disorders

Information for the public

Published: 8 March 2021

www.nice.org.uk

Alpha-Stim AID is an electrotherapy device. It stimulates calming brain waves through electrodes placed on the ear lobes. Regular use of Alpha-Stim AID may ease anxiety in people with anxiety disorders.

NICE has said Alpha-Stim AID shows promise but further research is needed. This is because it is not clear how well Alpha-Stim AID works or how much benefit people get compared with existing treatments.
