National Institute for Health and Care Excellence

Final

Intrapartum care for women with existing medical conditions or obstetric complications and their babies

[A] Evidence review for information for women with existing medical conditions

NICE guideline NG121

Evidence reviews for women at high risk of adverse outcomes for themselves and/or their baby because of existing maternal medical conditions

March 2019

Final

Developed by the National Guideline Alliance hosted by the Royal College of Obstetricians and Gynaecologists

Disclaimer

The recommendations in this guideline represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, professionals are expected to take this guideline fully into account, alongside the individual needs, preferences and values of their patients or service users. The recommendations in this guideline are not mandatory and the guideline does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and/or their carer or guardian.

Local commissioners and/or providers have a responsibility to enable the guideline to be applied when individual health professionals and their patients or service users wish to use it. They should do so in the context of local and national priorities for funding and developing services, and in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities. Nothing in this guideline should be interpreted in a way that would be inconsistent with compliance with those duties.

NICE guidelines cover health and care in England. Decisions on how they apply in other UK countries are made by ministers in the <u>Welsh Government</u>, <u>Scottish Government</u>, and <u>Northern Ireland Executive</u>. All NICE guidance is subject to regular review and may be updated or withdrawn.

Information provision (women at high risk of adverse outcomes for themselves and/or their baby because of existing maternal medical conditions)

Review question

What are the main areas of information about labour and birth that are needed by pregnant women with existing medical conditions?

Introduction

The overarching aim of this review is to determine what information makes a positive difference to women with existing medical conditions and their babies. This includes giving edited information and how clinical teams' decisions are conveyed to women and their birth companions. There are two sub-objectives:

- to explore the areas of information that would make a positive difference to women and their birth companions
- to evaluate the effectiveness of various information strategies or packages.

Areas of information, and information strategies or packages, to be included in the review will be relevant to quality of care in the intrapartum period (although they may be discussed or implemented in the antenatal, intrapartum or postnatal period). The review will consider women's reports of the information they would have liked to have received and what information would have been helpful for their families.

Summary of the protocol

See Table 1 for summaries of: the population, interest and context (PICo) characteristics for qualitative aspects of this review; and the population, intervention, comparison and outcomes (PICO) characteristics for quantitative aspects.

Table 1: Summary of the protocol (PICO) table

	· '
Population	Women at high risk of adverse outcomes for themselves and/or their baby during labour and birth because of the following existing maternal medical conditions:
	• cardiac disease
	• asthma
	• conditions requiring long-term systemic steroid medication
	haemostatic disorders
	 history of subarachnoid haemorrhage or arterio-venous malformation of the brain
	acute kidney injury or chronic kidney disease
	• obesity
Phenomenon of interest	For sub-objective 1
(for sub-objective 1) or	Phenomenon of interest:

intervention (for sub- objective 2)	 aspects of information provision that women defined in the population find useful, or believe they would have found useful (which could include information content relevant to the medical condition, or information regarding timing or mode of birth)
	For sub-objective 2
	Intervention:
	 any intervention or package of care designed to provide specific and/or additional information about labour and birth for women with existing medical conditions, for example, protocols for providing information or packages of information that can be provided to women and their birth companions
Comparison	For sub-objective 1
	• N/A
	For sub-objective 2
	Absence of information
	Usual information provision
Outcomes	For sub-objective 1 The qualitative stream will not have objective outcomes, but the review will prioritise women's experience of labour and birth. Other themes might emerge as part of the qualitative review, and these will be recorded.
	For sub-objective 2
	For the woman:
	• mortality
	major morbidity
	women's satisfaction with labour and birth
	 psychological outcomes (any including post-traumatic stress disorder, postnatal depression and anxiety)
	satisfaction/views of care
	For the baby:
	mortality
	major morbidity
V/A: not applicable	

N/A: not applicable

For further details see the full review protocol in appendix A. The search strategies are presented in appendix B.

Clinical evidence

Included studies

One qualitative study among women with acquired or inherited thrombophilia was included in this review (see 'Summary of clinical studies included in the evidence review'). This study (Martens 2007) was relevant for sub-objective 1. Semi-structured interviews were used to investigate women's experiences in the study.

Evidence from the studies included in the review is summarised below (see 'Quality assessment of clinical studies included in the evidence review').

There was no evidence identified for sub-objective 2 (quantitative review). Also, there was no evidence identified for any other population of interest (women with cardiac disease, asthma, long-term steroid medication, a history of intracranial haemorrhage or a cerebrovascular malformation, acute kidney injury or chronic kidney disease, or obesity).

See also the study selection flow chart in appendix C.

Excluded studies

Studies not included in this review with reasons for their exclusion are listed in appendix D.

Summary of clinical studies included in the evidence review

Table 2 provides a brief summary of the included studies.

Table 2: Summary of included studies

Study	Aim of the study	Participants	Study design and methods
Martens 2007 Qualitative study	To explore the experience of women with thrombophilia during pregnancy	N=9 women with acquired or inherited thrombophilia	 Sample selection: women attending the thrombosis clinic of a large university- affiliated hospital in
Canada			Montreal, Canada were invited to participate
			Data collection: semi- structured interviews

See also the study evidence tables in appendix E.

A theme map was not produced because there was only 1 theme.

No meta-analysis was undertaken for this review (and so there are no forest plots in appendix F).

Quality assessment of clinical studies included in the evidence review

The clinical (GRADE-CERQual) evidence profiles for the qualitative study included in this review are presented in appendix G.

Economic evidence

Included studies

No economic evidence was identified for this review.

See the study selection flow chart in Supplement 2 (Health economics).

Excluded studies

No full-text copies of articles were requested for this review and so there is no excluded studies list (see Supplement 2 (Health economics)).

Summary of studies included in the economic evidence review

No economic evidence was identified for this review (and so there are no economic evidence tables in Supplement 2 (Health economics)).

Economic model

No economic modelling was undertaken for this review because the committee agreed that other topics were higher priorities for economic evaluation (see Supplement 2 (Health economics)).

Evidence statements

Women with thrombophilia

Qualitative evidence for theme 1 - uncertainty regarding birth

Moderate quality evidence from 1 qualitative study identified that women with thrombophilia were uncertain about the risks of discontinuing heparin at the time of birth, and the consequences of starting spontaneous labour without discontinuing their injections.

The committee's discussion of the evidence

Interpreting the evidence

The outcomes that matter most

Outcomes for the woman and the baby were prioritised for the review as the committee determined that both were important and could be affected by information provision.

For sub-objective 1 (qualitative evidence), the committee agreed to be guided on which outcomes to prioritise by evidence emerging from included studies.

For sub-objective 2 (quantitative evidence), the committee considered mortality and major morbidities of both women and babies as critical outcomes because these are life-altering and potentially preventable with good information provision.

The committee also included women's satisfaction with labour and birth, their psychological outcomes and their satisfaction and views of care as important but not critical outcomes. These outcomes can assess the gap between service provision and women's expectations, and can therefore be used as proxies for effective antenatal information provision, as well as being important as an end in themselves.

The quality of the evidence

One qualitative study was included in this review. One limitation of the study was that it included only women with thrombophilia and is therefore not representative of the wider population of interest. Furthermore, the relationship between the researcher and the participants was unclear. On the other hand, the findings were coherent, and the data were

collected in Canada, and hence likely to be of some relevance to the NHS. Thus, overall GRADE-CERQual quality of the studies was appraised as moderate. However, the committee commented that the evidence was very scarce, and decided it was more appropriate to make recommendations based on their experience.

The committee determined that it was not appropriate to recommend randomised quantitative trials in this area because it was difficult to imagine a situation of clinical equipoise with respect to the group receiving less information. The committee also agreed that while it might be appropriate to conduct further qualitative research with these groups of women, the information the committee identified did not contradict the qualitative evidence from the NICE guideline on intrapartum care for healthy women and babies (CG190) and therefore the committee concluded that additional research on the qualitative information needs of women and babies at high risk in the intrapartum period because of existing maternal medical conditions might be of limited value compared to other questions that could be addressed qualitatively. Consequently they did not make any recommendations for further research.

Benefits and harms

The committee determined that it was important to provide women with medical conditions with information about the intrapartum period, and especially about intrapartum-related reasons why the birth could be different to that of healthy women. The committee added that routine information about the intrapartum period should not be forgotten, and that the NICE guideline on intrapartum care for healthy women and babies (CG190) was an appropriate source of information. The benefit of providing such information is to allow for shared decision making, and ensure that the woman fully consents to any changes to the management of her condition during the intrapartum period. In addition, information should be shared in line with the NICE guideline on patient experience in adult NHS services (CG138).

The NICE guideline on <u>patient experience in adult NHS services</u> (CG138) recommends clarifying with the patient at the first point of contact whether and how they would like their partner, family members or carers to be involved in key decisions about the management of their condition, stating that this should be reviewed regularly and, if the patient agrees, information should be shared with their partner, family members or carers. The guideline also states that if the patient cannot indicate their agreement to share information, those providing care should keep family members or carers involved and appropriately informed, but should be mindful of any potentially sensitive issues and the duty of confidentiality. The committee agreed that it is up to the woman to decide whether and how her birth companion(s) are involved in discussions about her care during labour and birth, so they recommended clarifying with women how they would like their birth companion(s) involved in these discussions, and to review this regularly.

As one purpose of providing information is to allow the woman to make decisions about her care, the committee determined that it was better to provide the information as early as possible in order to allow the woman the longest possible time to make decisions, and to make alterations to the birth plan in response to the decisions if needed. Providing information early also has the advantage of allowing the woman time to ask follow-up questions, and to review the information provided regularly. Finally providing information early is important as high-risk conditions might increase the risk of a preterm birth (either spontaneously or because of a clinical decision taken to manage the risk to the woman). The committee explained that for some conditions (for example, some neurological conditions or long-term haematological conditions), an approximate understanding of impact on the

intrapartum period can be discussed before the woman becomes pregnant, and this should be done if possible.

The committee was aware that information about the intrapartum period was sometimes given to healthy women by a variety of healthcare professionals, for example, a nurse or midwife with no other clinical obligations towards the woman. They determined that this was inappropriate for women with a high-risk intrapartum period, since the woman's care would be managed by a multidisciplinary team, and therefore information about the woman's care needed to come from a member of the multidisciplinary team with sufficient contact with the woman and the team to explain why a particular course of action was recommended and capable of answering questions from the woman on either the intrapartum period or her medical condition.

The committee discussed how information provision would be more challenging if the woman had not had any antenatal care, since it would make it more difficult to discuss the information with the woman and respond to her preferences for labour and birth after sharing the information. The committee recommended that the same principles should be applied to women who have not received antenatal care, but accepted that it would not always possible to follow every recommendation. Consequently women with no antenatal care should still receive a good quality of information as early as possible, but may have less opportunity to make decisions about their care in light of that information (for example, depending on the stage of labour at which the woman presents it may not be possible to offer a caesarean section).

Cost effectiveness and resource use

The evidence was very limited and the committee made a qualitative assessment of cost effectiveness. They noted that their recommendations on information provision were generally not resource intensive, although they recognised that staff time would be required.

The committee considered that it would be cost effective to provide women with existing medical conditions information about the intrapartum period and in a timely manner, in order to facilitate an informed decision with respect to the woman's choices and potential modifications to the birth plan. They committee considered that this would have a beneficial impact on psychological outcomes and the woman's satisfaction with labour and birth.

The committee considered that their recommendations largely reflected current practice and, therefore, they did not anticipate a significant resource impact to the NHS. However, they thought that for some centres longer consultations might be necessary.

Other factors the committee took into account

The committee discussed that information provision would be challenging for women who had difficulty with communication, for example, women who spoke English as a second language (or not at all), women with a learning difficulty and women with a speech and language impairment. The committee determined that it was not necessary to make a specific recommendation for sharing information with this group, as NICE's existing recommendations on services are explicit in ensuring that communication with the woman acknowledges the importance of factors making communication difficult.

Despite the limited evidence, the committee decided to prioritise other areas addressed by the guideline for future research and therefore made no research recommendations regarding information provision.

The committee was aware that NICE had published a guideline on <u>diabetes in pregnancy</u> (NG3), which was not otherwise cross-referenced in the guideline recommendations, and so they signposted this after the recommendations about information for women with existing medical conditions.

Information provision (women at high risk of adverse outcomes for themselves and/or their baby because of existing maternal medical conditions)

Item	Details	Working notes
Area in the scope	Women at high risk of adverse outcomes for themselves and/or their baby because of existing maternal medical conditions – information provision	
Review question in the scope	What are the main areas of information about labour and birth that are needed by pregnant women with existing medical conditions?	
Review question for the guideline	What are the main areas of information about labour and birth that are needed by pregnant women with existing medical conditions?	
Objective	The aim of this review is to determine what information makes a positive difference to women with existing medical conditions and their babies. This includes giving edited information and how clinical teams' decisions are conveyed to women and their birth companions.	
	There are two sub-objectives: 1. to explore the areas of information that would make a positive difference to women and their birth companions 2. to evaluate the effectiveness of various information strategies or packages.	
	Areas of information, and information strategies or packages, to be included in the review will be relevant to quality of care in the intrapartum period (although they may be discussed or implemented in the antenatal, intrapartum or postnatal period). The review will consider women's reports of the information they would have liked to have received and what information would have been helpful for their families	
Population and directness	For sub-objectives 1 and 2 Women at high risk of adverse outcomes for themselves and/or their baby during labour and birth because of the following existing maternal medical conditions: • cardiac disease • asthma	
	 conditions requiring long-term systemic steroid medication haemostatic disorders 	
	 history of subarachnoid haemorrhage or arterio-venous malformation of the brain 	
	 acute kidney injury or chronic kidney disease 	

Item	Details	Working notes
	• obesity	
Phenomenon of interest (for sub-objective 1) or intervention (for sub-objective 2)	 For sub-objective 1 Phenomenon of interest: aspects of information provision that women defined in the population find useful, or believe they would have found useful (which could include information content relevant to the medical condition, or information regarding timing or mode of birth) Specific themes will be identified from the literature and recorded For sub-objective 2 Intervention: any intervention or package of care designed to provide specific and/or additional information about labour and birth for women with existing medical conditions, for example, protocols for providing information or packages of information that can be provided to women and their birth companions 	
Comparison	For sub-objective 1 N/A For sub-objective 2 Absence of information Usual information provision	
Outcomes	For sub-objective 2 Critical outcomes: • for the woman: • mortality • major morbidity • for the baby: • mortality • major morbidity Important outcomes: • for the woman: • women's satisfaction with labour and birth • psychological outcomes (any including post-traumatic stress disorder, postnatal depression and anxiety) Outcomes of limited importance: • for the woman: • satisfaction with care/views of care

Item	Details	Working notes
Search strategy	Sources to be searched: Medline, Medline In-Process, CCTR, CDSR, DARE, HTA, Embase, PsycInfo and MIDIRS. Limits (e.g. date, study design): study designs limited to qualitative studies, systematic reviews, RCTs, cohort studies and before-and-after studies; apply standard animal/non-English language filters; no date limit. Supplementary search techniques: no supplementary search techniques were used. See appendix B for full strategies	
Review strategy	 For sub-objective 1 Appraisal of methodological quality: the methodological quality of each study will be assessed using a qualitative study quality checklist (CASP) as set out in the NICE guidelines manual 2014 the quality of the evidence for each review finding (that is, across studies) will be assessed using the GRADE-CERQual approach Synthesis of data: thematic analysis of the data will be conducted and findings presented data will be extracted to the point of saturation (that is, when all information needs have been detected and no new information is found); from this point on, no more papers will be reviewed thematic data analysis will consider information needs specific to the population sub-groups listed above For sub-objective 2 Appraisal of methodological quality: the methodological quality of each study will be assessed using checklists recommended in the NICE guidelines manual 2014 (for example, AMSTAR or ROBIS for systematic reviews, and Cochrane RoB tool for RCTs) and the quality of the evidence for each outcome (that is, across studies) will be assessed using GRADE if studies report only p-values, this information will be recorded in GRADE tables without an assessment of imprecision Synthesis of data: meta-analysis will be conducted where appropriate default MIDs will be used; 0.8 and 1.25 for dichotomous outcomes; 0.5 times the SD of the measurement in the control arm (or median score across control arms if multiple studies are included) for continuous data, change scores will be used in preference to final scores for data from non-RCT studies; final and change scores will not be pooled; if 	Review questions selected as high priorities for health economic analysis (and those selected as medium priorities and where health economic analysis could influence recommendations) will be subject to dual weeding and study selection; any discrepancies will be resolved through discussion between the first and second reviewers or by reference to a third person. This review question was not prioritised for health economic analysis and so no formal dual weeding, study selection (inclusion/exclusion) or data extraction into evidence tables will be undertaken. However, internal (NGA) quality assurance processes will include consideration of the outcomes of weeding, study selection and data extraction and the committee will review the results of study selection and data extraction

Item	Details	Working notes
	any study reports both, the method used in the majority of studies will be adopted	
Equalities	Equalities considerations will be considered systematically in relation to the available evidence and draft recommendations.	
	The guideline scope includes women with cognitive or physical disability as populations for whom there may be equalities issues. Recommendations about information provision should take into account patient inequalities such as those caused by vision, auditory and cognitive difficulties.	
	Women who have received no antenatal care will be considered as a subgroup for all systematic reviews performed within the medical conditions work stream and a specific question has been included in the obstetric complications work stream for this population

Will C. Stone H. Dodd J. M. Robinson J. S. Deussen A. Crowther C. Wilkinson C. Purcell H. Wood J. Press D. Ralph K.	No data on information needs regarding labour and birth. The trial provided information specific to dietary, physical activity and lifestyle advice

Study	Reason for exclusion
Donleavy S. Seager S. Gately F. Jolly A. Lahnstein L. Harding S. Daw K. Hedges M. Fraser-Trumble R., The effect of antenatal dietary and lifestyle advice for women who are overweight or obese on emotional well-being: the LIMIT randomized trial, Acta obstetricia ET gynecologica scandinavica, 95, 309-18, 2016	
Fragoso, Y. D., Fragoso, S. D., Finkelsztejn, A., Brooks, J. B., Rebs, R. R., Systematic review versus internet search: considerations about availability and reliability of medical information regarding pregnancy in women with multiple sclerosis, Revista Brasileira de Epidemiologia, 15, 896-903, 2012	No data on information needs regarding labour and birth – the article compares availability and quality of information from medical literature and highly accessed internet sites
Gagnon, Anita J., Sandall, Jane, Individual or group antenatal education for childbirth or parenthood, or both, Cochrane Database of Systematic Reviews, -, 2011	Systematic review – references checked for relevant articles
Grobman,W.A., Kavanaugh,K., Moro,T., DeRegnier,R.A., Savage,T., Providing advice to parents for women at acutely high risk of periviable delivery, Obstetrics and Gynecology, 115, 904-909, 2010	No data on information needs regarding labour and birth - article discusses information provision for women with obstetric risk factors (e.g. premature rupture of membranes, threatened preterm labour) and there is a focus on neonatal outcomes
Harrison, M. J., Kushner, K. E., Benzies, K., Rempel, G., Kimak, C., Women's satisfaction with their involvement in health care decisions during a high-risk pregnancy, Birth, 30, 109-15, 2003	Population do not meet inclusion criteira - all women had either threatened preterm labour or hypertension. No data on information regarding labour and birth
Heaman, M., Beaton, J., Gupton, A., Sloan, J., A comparison of childbirth expectations in high-risk and low-risk pregnant women, Clinical Nursing Research, 1, 252-65, 1992	Population do not meet inclusion criteria - high risk women included were diagnosed with hypertension, threatened preterm labour and premature rupture of membranes. Study assesses expectations but not information needs
Heslehurst, Nicola, Dinsdale, Sarah, Sedgewick, Gillian, Simpson, Helen, Sen, Seema, Summerbell, Carolyn Dawn, Rankin, Judith, An evaluation of the implementation of maternal obesity pathways of care: a mixed methods study with data integration, PLoS ONE, 10, e0127122, 2015	Population and outcomes do not meet inclusion criteria - the women were within an obesity care pathway
Hess,R.F., Weinland,J.A., Beebe,K., "I am not alone": a survey of women with peripartum cardiomyopathy and their participation in an online support group, CIN: Computers, Informatics, Nursing, 28, 215-221, 2010	No data on information needs regarding labour and birth – the data considers how a support group has helped women
Hueston, W.J., Knox, M.A., Eilers, G., Pauwels, J., Lonsdorf, D., The effectiveness of preterm-birth prevention educational programs for high-risk women: a meta-analysis, Obstetrics and Gynecology, 86, 705-712, 1995	Population do not meet the inclusion criteria - women are at high risk of preterm delivery, they do not have medical complications.

Study	Reason for exclusion
	No data on information needs regarding labour and birth
Kane, A., The benefits of doula service in the high-risk pregnancy, International Journal of Childbirth Education, 12, 18-19, 1997	Full text of article unavailable
Karabulut, O., Coskuner Potur, D., Dogan Merih, Y., Cebeci Mutlu, S., Demirci, N., Does antenatal education reduce fear of childbirth?, International Nursing Review, 63, 60-7, 2016	Population do not meet inclusion criteria- the study does not include high risk women.
	No data on information needs regarding labour and birth
Lavender, T., Smith, D. M., Seeing it through their eyes: a qualitative study of the pregnancy experiences of women with a body mass index of 30 or more, Health Expectations, 19, 222-33, 2016	No data on information needs regarding labour and birth
Lee, L. Y. K., Holroyd, E., Evaluating the effect of childbirth education class: A mixed-method study, International Nursing Review, 56, 361-368, 2009	Population do not meet inclusion criteria – the study population is comprised of low risk women
Lee, Suzanne, Holden, Des, Ayers, Susan, How women with high risk pregnancies use lay information when considering place of birth: A qualitative study, Women and birth: journal of the Australian College of Midwives, 29, e13-7, 2016	Population does not meet the inclusion criteria – women were considered "high-risk" because of previous caesarean section
Lim, Angelina S., Stewart, Kay, Abramson, Michael J., Ryan, Kath, George, Johnson, Barker, Blais Chambers George Juniper Levine Lim Murphy Olesen Opat Pope Powell Sawicki Schatz Stenius-Aarniala Sugai, Asthma during pregnancy: The experiences, concerns and views of pregnant women with asthma, Journal of Asthma, 49, 474-479, 2012	No data on information needs regarding labour and birth
Lindhardt, C. L., Rubak, S., Mogensen, O., Lamont, R. F., Joergensen, J. S., The experience of pregnant women with a body mass index >30 kg/m2 of their encounters with healthcare professionals, Acta Obstetricia et Gynecologica Scandinavica, 92, 1101-7, 2013	No data on information needs regarding labour and birth
McGrath, A., Sharpe, L., Lah, S., Parratt, K., Pregnancy-related knowledge and information needs of women with epilepsy: A systematic review, Epilepsy and Behavior, 31, 246-255, 2014	No data specific to labour and birth, only regarding overall antenatal care and outcomes for the baby
McLachlan, B., Improving support for women with complicated pregnancies, Changing Childbirth Update, 2, 1996	Full text of article unavailable
Mountifield, R. E., Prosser, R., Bampton, P., Muller, K., Andrews, J. M., Pregnancy and IBD treatment: This challenging interplay from a patients' perspective, Journal of Crohn's and Colitis, 4, 176-182, 2010	No data on information needs regarding labour and birth
Mulder, E., Davis, A., Gawley, L., Bowen, A., Einarson, A., Negative impact of non-evidence-based information received by women taking antidepressants during pregnancy from health care providers and others, Journal of Obstetrics & Gynaecology Canada: JOGC, 34, 66-71, 2012	No data on information needs regarding labour and birth - results only consider medication use during pregnancy

Study	Reason for exclusion
Munstedt, K., von Georgi, R., Eichel, V., et al., Wishes and expectations of pregnant women and their partners concerning delivery, Journal of Perinatal Medicine, 28, 482-490, 2000	No data on information needs regarding labour and birth- the article considers expectations and requirements for birth (e.g. availability of paediatric team, availability of medical staff)
Persily, C. A., Help seeking in high risk pregnancy: the role of the CNS, Clinical Nurse Specialist, 9, 207-13, 220, 1995	No data on information needs regarding labour and birth – the study reports on categories of questions (and specific questions) that were asked of a clinical nurse specialist by women with diabetes
Reron, A., Pachi, A., Kopczynska-Tyszko, A., et al.,, Attitudes towards pregnancy and labour among Polish and Italian women hospitalized for high-risk pregnancy, International Journal of Prenatal and Perinatal Psychology and Medicine, 7, 139-145, 1995	No data on information needs regarding labour and birth
Svensson, J., Barclay, L., Cooke, M., Randomised-controlled trial of two antenatal education programmes, Midwifery, 25, 114-125, 2009	Population do not meet the inclusion criteria – the study only includes low risk women
Tingstrom, J., Hjelmstedt, A., Welin Henriksson, E., Ambrosi, A., Sonesson, S. E., Wahren-Herlenius, M., Anti-Ro/SSA autoantibody-positive women's experience of information given on the risk of congenital heart block, Lupus, 25, 536-542, 2016	No data on information needs regarding labour and birth
Tingstrom, J., Henriksson, E.W., Sonesson, S.E., Wahren-Herlenius, M., Ro52 autoantibody-positive women's experience of being pregnant and giving birth to a child with congenital heart block, Midwifery, 29, 18-23, 2013	No data on information needs regarding labour and birth
Tingstrom, J., Barimani, M., Sonesson, S.E., Wahren- Herlenius, M., Henriksson, E.W., The experiences of pregnancy in women with SSA/Ro52 autoantibodies, Musculoskeletal Care, 8, 215-223, 2010	No data on information needs regarding labour and birth
Walker, M.G., Windrim, C., Ellul, K.N., Kingdom, J.C., Webbased education for placental complications of pregnancy, Journal of Obstetrics and Gynaecology Canada: JOGC, 35, 334-339, 2013	Population do not meet the inclusion criteria - the data only relates to pregnancies with obstetric risk (placental disorders)
Widnes, S. F., Schjott, J., Granas, A. G., Risk perception and medicines information needs in pregnant women with epilepsya qualitative study, Seizure, 21, 597-602, 2012	No data on information needs regarding labour and birth - only regarding medication use in the antenatal period

Economic studies

See Supplement 2 (Health economics) for details of economic evidence reviews and health economic modelling.

Appendix E – Clinical evidence tables

Information provision (women at high risk of adverse outcomes for themselves and/or their baby because of existing maternal medical conditions)

D., The experiences and challenges of pregnant women coping with thrombophilia, JOGNN - Journal of Obstetric, Gynecologic, & Neonatal Nursing, 36, 55-62, 2007 Ref Id 577773 Country/ies where the study was carried out Canada Study type Qualitative study -	Sample size N = 9 Characteristics Nature of thrombophilia Antiphospholipid syndrome: n = 7 Factor V Leiden: n = 1 Protein S deficiency: n = 1 Pregnancy status	Setting Eligible participants were identified from the thrombosis clinic at a large university-affiliated hospital in Montreal. Data collection Semi-structured interviews (lasting approximately 45 minutes) were conducted at a location convenient for the participant (such as their	Themes/categories Uncertainty about labour and birth Participants were fearful about the process of giving birth whilst on LMWH. "So then you're worried because labor isn't always planned, right, and what ifI mean what if I went into labor at 33 [weeks] and I took [LMWH] yesterday or I took it today and I would worry that I would go into labor; what would ultimately	Limitations Limitations were assessed using the CASP qualitative checklist. Aims: Aim of the study was clearly reported, research design was appropriate for answering the research question. Sample selection: Sample selection was clearly reported. The interviewees were all recruited from the same hospital. Data collection: Data collection relied on semi-structured interviews lasting approximately 45 minutes. The women were encouraged to expand on their stories whatever they felt was important to tell.

pregnancy in women with thrombophilia. Source of funding Not reported.	low molecular weight heparin during pregnancy • currently pregnant or had been pregnant within the last 12 months Exclusion criteria Not reported.	Interviews were audiotaped and transcribed verbatim. Transcripts of the interviews and field notes were examined line by line, and key statements were highlighted and coded. Codes were then defined, categorised and compiled into themes. Themes were examined for overlap between participants and continually refined. Each step of the analysis was validated by the co-author.		and the researchers' own input were clearly distinguished). Regarding credibility of the findings, the paper reports that each step of the analysis and findings were validated by a co-author. The authors discuss the limitations of the study and where more research is needed. Overall quality: Moderate Other information: The study obtained formal ethical approval from the institutional review boards of the study hospital and the study university.

LMWH: low molecular weight heparin

Intrapartum care for women with existing medical conditions or obstetric complications and their babies

Appendix F – Forest plots

Information provision (women at high risk of adverse outcomes for themselves and/or their baby because of existing maternal medical conditions)

No meta-analysis was undertaken for this review and so there are no forest plots.

Appendix G – GRADE-CERQual tables

Information provision (women at high risk of adverse outcomes for themselves and/or their baby because of existing maternal medical conditions)

Table 3: Qualitative evidence profile for theme 1 – uncertainty regarding birth
