Intrathoracic nodal staging of non-small-cell lung cancer in patients being considered for radical treatment

Intrathoracic nodes refer to mediastinal and hilar lymph nodes

Treatment Decision by multidisciplinary team

**Intrathoracic nodes <10 mm short axis**
- PET-CT
  - Intrathoracic nodes negative on PET-CT
  - Intrathoracic nodes positive on PET-CT

**Intrathoracic nodes ≥10 mm short axis**
- PET-CT
  - EBUS-TBNA and/or EUS-FNA if no extra-thoracic lesion
    - Positive EBUS-TBNA and/or EUS-FNA
    - Negative EBUS-TBNA and/or EUS-FNA
      - Consider surgical nodal staging
