Disclaimer

The recommendations in this guideline represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, professionals are expected to take this guideline fully into account, alongside the individual needs, preferences and values of their patients or service users. The recommendations in this guideline are not mandatory and the guideline does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and/or their carer or guardian.

Local commissioners and/or providers have a responsibility to enable the guideline to be applied when individual health professionals and their patients or service users wish to use it. They should do so in the context of local and national priorities for funding and developing services, and in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities. Nothing in this guideline should be interpreted in a way that would be inconsistent with compliance with those duties.

NICE guidelines cover health and care in England. Decisions on how they apply in other UK countries are made by ministers in the [Welsh Government](#), [Scottish Government](#), and [Northern Ireland Executive](#). All NICE guidance is subject to regular review and may be updated or withdrawn.

Review questions

Review questions	
A	Identifying people who would most benefit from mental health rehabilitation services
A1	What service user characteristics are associated with successful progress in rehabilitation services for people with complex psychosis and related severe mental health conditions?
A2	What co-existing social (including family, cultural and ethnicity) or communication problems pose barriers for people with complex psychosis and related severe mental health conditions in accessing rehabilitation services?
A3	What coexisting medical, neurodevelopmental, cognitive and mental health conditions need to be considered when forming a rehabilitation plan for people with complex psychosis?
B	Organisation, function and structure of services, including inpatient and community-based rehabilitation units and teams
B1	What is the effectiveness of rehabilitation services compared with standard care?
B2	What is the comparative effectiveness of different types of rehabilitation services?
B3	What are the required components of an effective rehabilitation pathway?
B4	What are the barriers and facilitators to integrated rehabilitation care pathways involving multiple providers (including health, social care, non-statutory, independent and voluntary services)?
C	Delivering optimised treatments for people with complex psychosis and other severe mental health conditions to help recovery and prevent relapse
C1	What principles should guide adjustments to standard treatments in the management of the underlying psychosis in people using rehabilitation services?
D	Collaborative care planning and service user experience
D1	What is the best way of involving people with complex psychosis and related severe mental health conditions, and their families and carers, in planning their care collaboratively with practitioners and providers?
D2	What rehabilitation approaches, care, support and treatment are valued by people with complex psychosis and related severe mental health conditions, and by their families and carers?
E	Therapeutic programmes specific to rehabilitation
E1	What interventions specific to rehabilitation are effective for people with complex psychosis and related severe mental health conditions to improve their activities of daily living?
E2	What interventions specific to rehabilitation are effective for people with complex psychosis and related severe mental health conditions to improve their inter-personal functioning and social skills?
E3	What interventions specific to rehabilitation are effective for people with complex psychosis and related severe mental health conditions to improve their engagement in community activities (for example, leisure, education and work)?
E4	What interventions specific to rehabilitation are effective in improving the engagement of people with complex psychosis and related severe mental health conditions in healthy living (nutrition, weight, physical activity, sleep, oral health, accessing health services, health monitoring, smoking cessation)?
E5	What interventions specific to rehabilitation are effective in improving the engagement of people with complex psychosis and related severe mental health conditions in addressing substance misuse?
F	Types of supported accommodation and housing
F1	What features of supported accommodation and housing promote successful community living in people with complex psychosis and related severe mental health conditions?
G	Transition from rehabilitation services to other parts of the mental health system or discharge to primary care
G1	What criteria are associated with successful transition through rehabilitation services to other

Review questions

	parts of the mental health, social care and primary care systems?
G2	What processes are needed to support successful transitions?
