FINAL

Safeguarding adults in care homes

[A] Indicators of abuse and neglect

NICE guideline NG189

Evidence reviews

February 2021

Final

These evidence reviews were developed by the National Guideline Alliance which is part of the Royal College of Obstetricians and Gynaecologists

Disclaimer

The recommendations in this guideline represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, professionals are expected to take this guideline fully into account, alongside the individual needs, preferences and values of their patients or service users. The recommendations in this guideline are not mandatory and the guideline does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and/or their carer or guardian.

Local commissioners and/or providers have a responsibility to enable the guideline to be applied when individual health professionals and their patients or service users wish to use it. They should do so in the context of local and national priorities for funding and developing services, and in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities. Nothing in this guideline should be interpreted in a way that would be inconsistent with compliance with those duties.

NICE guidelines cover health and care in England. Decisions on how they apply in other UK countries are made by ministers in the <u>Welsh Government</u>, <u>Scottish Government</u>, and <u>Northern Ireland Executive</u>. All NICE guidance is subject to regular review and may be updated or withdrawn.

Indicators of abuse and neglect

2 Review questions

- 3 This evidence report contains information on 2 diagnostic reviews designed to identify 'signs
- 4 and symptoms' of abuse and neglect. The committee anticipated that relevant studies would
- 5 have an overlapping focus on abuse and neglect. For this reason, they agreed it would be
- 6 appropriate for the reviews to be analysed and reported together in a single evidence report.
- 7 The 2 review questions were:
 - What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

10 Introduction

8

- 11 Recognising the indicators of abuse and neglect in care homes is important because they
- may be different from indicators of abuse and neglect in other settings such as in people's
- own homes or in the community.
- 14 Abuse and neglect of adults in care homes can take many different forms and affect
- residents in many different ways. Indicators that alert staff, residents and others to the
- 16 existence of abuse and neglect are diverse and may include not only direct disclosures but
- 17 also physical, behavioural, environmental and other markers. Local Safeguarding Adult
- 18 Boards normally include within their policy documents a section that outlines the 'signs and
- 19 symptoms' of abuse, but these vary from area to area. Nationally, SCIE has published a
- 20 useful overview called <u>Safeguarding Adults: Types and indicators of abuse</u>.
- 21 However, whilst the existing documents are useful, they do not focus specifically on
- 22 safeguarding adults in care homes. As a consequence, there is insufficient attention paid to
- important issues including the need to understand the separate aetiologies of individual
- and organisational abuse, and the need to distinguish between neglect (omissions and
- 25 oversights on the part of carers) and self-neglect (extreme lack of self-care on the part of an
- 26 individual).

30

31

27 Summary of the protocol

- Please see Table 1 and Table 2 for a summary of the Population, Indicators, Comparison
- and Outcome (PICO) characteristics of this review.

Table 1: Summary of the protocol (PICO table) – What indicators should alert people to abuse in care homes?

Population	Adults (aged over 18 years) accessing care and support in care homes
Indicators	Signs and symptoms of abuse (as defined by the Care Act 2014 and including organisational and individual abuse) within care homes. The review will be led by the signs and symptoms for which diagnostic accuracy data are located. Examples might include but will not be limited to:
	 Physical effects on the individual (such as bruising, weight changes, dehydration, malnutrition, sleep problems). Emotional and psychological effects on the individual (such as behaviour changes, for example, withdrawal, mood changes, clinical depression, social isolation).

2

	 Effects on the care home environment (such as offensive odours, a lack of infection control measures, use of physical or chemical restraint, sharing or communal use of residents' personal items). Effects on the performance of the care home (such as rates of emergency admission, the incidence of falls, financial mismanagement).
Comparison	The reference standard for identifying abuse cited in the included studies will be used, for example, the findings of a safeguarding review or a police report, which confirm abuse.
Outcomes	 Critical outcomes Sensitivity and specificity of signs and symptoms (as indicators of abuse). Positive predictive value (of signs and symptoms). Negative predictive value (of signs and symptoms). Important outcomes No important outcomes were identified by the guideline committee.

Table 2: Summary of the protocol (PICO table) – What indicators should alert people to neglect in care homes?

to neglect in care no	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
Population	Adults (aged over 18 years) accessing care and support in care homes.
Indicators	Signs and symptoms of neglect (as defined by the Care Act 2014 and including self-neglect) within care homes. The review will be led by the signs and symptoms for which diagnostic accuracy data are located. Examples might include but will not be limited to:
	 Physical effects on the individual (such as, weight changes, dehydration, malnutrition, dental caries, infection, skin damage, sleep problems, contractures, worsening of clinical frailty).
	 Emotional and psychological effects on the individual (such as behaviour changes, mood changes, clinical depression, social isolation/withdrawal, boredom).
	 Effects on the care home environment (such as offensive odours, a lack of infection control measures, sharing or communal use of residents' personal items).
	 Effects on the performance of the care home (such as rates of emergency admission, the incidence of falls, financial mismanagement).
Comparison	The reference standard for identifying neglect cited in the included studies will be used, for example, the findings of a safeguarding review or a police report, which confirm neglect.
Outcomes	Critical outcomes
	 Sensitivity and specificity of signs and symptoms (as indicators of neglect).
	 Positive predictive value (of signs and symptoms).
	Negative predictive value (of signs and symptoms).
	Important outcomes
	No important outcomes were identified by the guideline committee.

3 For further details see the review protocol in appendix A.

1 Methods and process

- 2 This evidence review was developed using the methods and process described in
- 3 Developing NICE guidelines: the manual. Methods for this review question are described in
- 4 the review protocol in appendix A and the methods document.

5 Evidence

6 Included studies

- A systematic review of the literature was conducted using a combined search but no studies
- 8 were identified which were applicable to these 2 review questions.
- 9 See the literature search strategy in appendix B and study selection flow chart in appendix C.

10 Excluded studies

- 11 Studies not included in this review with reasons for their exclusions are provided in appendix
- 12 K.

13 Summary of studies included in the evidence review

- 14 No studies were identified which were applicable to this review question (and so there are no
- 15 evidence tables in Appendix D). No meta-analysis was undertaken for this review (and so
- there are no forest plots in Appendix E).

17 Quality assessment of outcomes included in the evidence review

No studies were identified which were applicable to this review question.

19 Economic evidence

20 Included studies

- 21 A systematic review of the economic literature was undertaken but no economic studies were
- identified which were applicable to this review question.

23 Economic model

- No economic modelling was undertaken for this review because the committee agreed that
- the review question did not address decisions between competing courses of action.

26 The committee's discussion of the evidence

27 Interpreting the evidence

28 The outcomes that matter most

- 29 The protocols were designed to identify evidence in which the sensitivity and specificity, and
- 30 predictive values of discreet indicators was presented.

31 The quality of the evidence

- 32 No evidence was identified which met the criteria outlined in the protocols for review A. The
- 33 lack of evidence about the indicators of abuse and neglect in care homes prompted the
- committee to discuss areas that need research to inform future guidelines. As a result of their
- discussions, the committee identified self-neglect as a particularly important area for future

- 1 research. They therefore agreed to prioritise a research recommendation about identifying
- the indicators that should alert people to self-neglect in care homes.

3 Benefits and harms

- 4 Because no evidence was identified for this review question, the committee agreed to look
- 5 for evidence about indicators of organisational abuse and individual abuse and neglect as
- 6 part of evidence review C: Tools to support recognition and reporting of safeguarding
- 7 concerns. Evidence review C used sector guidance (in the absence of research evidence)
- and the committee were able to use this guidance to make recommendations that covered all
- 9 the signs and symptoms of abuse and neglect that had been identified as important in the
- 10 PICOs shown in table 1 and 2 for this review. The committee also agreed a number of
- indicators using their own knowledge and experience about the identification of abuse and
- 12 neglect in care homes. The committee agreed it was particularly important to do this in the
- area of organisational abuse as there was little guidance about indicators of this kind and
- how to respond to them. As organisational level abuse is likely to affect a larger number of
- 15 residents the committee agreed that were significant potential harms resulting from failure to
- recognise and respond to this type of abuse.
- 17 Details on how the sector guidance was used to write recommendations about potential
- indicators of abuse and neglect and the committee's decision to draft number of consensus
- 19 recommendations can be found in evidence review C.
- 20 Because evidence about 'diagnosing' or 'identifying' abuse and neglect was presented in
- 21 review C, the committee therefore agreed that the absence of evidence in this review did not
- in itself leave a 'gap' that warranted the need for a research recommendation. The exception
- 23 to this was the issue of identifying neglect, about which no data were reported in review C
- either. The committee therefore made a research recommendation on this specific issue
- 25 (rather than on the broad question of 'diagnosing' or identifying abuse and neglect more
- generally). This is described in appendix L.

27 Cost-effectiveness and resource use

- 28 Because no evidence was identified for this review question, the committee agreed to make
- 29 indicator recommendations based on evidence review C: Tools to support recognition and
- reporting of safeguarding concerns, which used sector guidance as the basis for
- 31 recommendations, in the absence of research evidence. Considerations of cost effectiveness
- 32 and resource use are made in that evidence review.

Appendices

2 Appendix A – Review protocols

3 Review protocol for review question A: What indicators should alert people to abuse in care homes?

4 Table 3: Review protocol for indicators of abuse

ID	Field (based on PRISMA-P)	Content	
0.	PROSPERO registration number	CRD42019128970	
1.	Review title	Identification of abuse in care homes.	
2.	Review question	What indicators should alert people to abuse in care homes?	
3.	Objective	 To find out whether or not an adult in a care home is being abused or whether there is a possibility they are being abused. 	
		To determine how well specific signs and 'symptoms' perform as indicators of abuse.	
		This review will use the definition of abuse from the Care Act 2014, as set out in the guideline scope :	
		Physical abuse.	
		Domestic violence.	
		Sexual abuse.	
		Psychological abuse.	
		Financial or material abuse.	
		Modern slavery (such as forced labour).	
		Discriminatory abuse.	
		Organisational abuse.	
4.	Searches	The following databases will be searched:	
		Cochrane Database of Systematic Reviews (CDSR)	
		Cochrane Central Register of Controlled Trials (CENTRAL)	
		MEDLINE & Medline in Process	

ID	Field (based on PRISMA-P)	Content
		• Embase
		• ASSIA
		• IBSS
		Social Policy and Practice
		Social Services Abstracts
		Sociological Abstracts.
		Searches will be restricted by:
		• date limit: 1990 onwards (see rationale under Section 10)
		English language
		human studies
		diagnostic filter.
		Other searches: Additional searching may be undertaken if required (for example, reference or citation searching).
		With the agreement of the guideline committee the searches will be re-run 6 weeks before final submission of the review and further studies retrieved for inclusion.
		The full search strategies for MEDLINE database will be published in the final review.
5.	Condition or domain being studied	Abuse of adults in care homes.
6.	Population	Inclusion: Adults accessing care and support in care homes.
		Exclusion: The scope of the guideline is safeguarding adults in care homes. Therefore, people under 18 years of age who are visiting or accessing support in care homes are excluded.
7.	Intervention/Exposure/Test	Sign and symptoms of abuse (as defined by the Care Act 2014 and including organisational and individual abuse) within care homes. The review will be led by the signs and symptoms

ID	Field (based on PRISMA-P)	Content
		for which diagnostic accuracy data are located. Examples might include but will not be limited to:
		 Physical effects on the individual (such as bruising, weight changes, dehydration, malnutrition, sleep problems).
		 Emotional and psychological effects on the individual (such as behaviour changes, for example, withdrawal, mood changes, clinical depression, social isolation).
		 Effects on the care home environment (such as offensive odours, a lack of infection control measures, use of physical or chemical restraint, sharing or communal use of residents' personal items).
		 Effects on the performance of the care home (such as rates of emergency admission, the incidence of falls, financial mismanagement).
8.	Comparator/Reference standard/Confounding factors	The reference standard cited in the included studies will be used, for example, the findings of a safeguarding review or a police report, which confirm abuse.
9.	Types of study to be included	Studies of adults in care homes displaying certain signs or symptoms (or where signs have been identified in the care home's environment or performance) and which provide evidence of whether those people are actually experiencing abuse.
		Cohort studies (prospective study designs will be prioritised over retrospective designs).
		Cross-sectional studies.
		 systematic reviews and meta-analyses of these study types.
10.	Other exclusion criteria	A step-wise approach will be taken whereby studies conducted in the UK and high income countries (according to the World Bank) will be included on title and abstract and their full texts will be retrieved. If full text screening results in no UK data, then studies from high income countries will be included.
		Studies conducted in congregate care settings.
		Exclusion criteria:

ID	Field (based on PRISMA-P)	Content
		 Articles published before 1990. However, if a large volume of studies is located which were published after No Secrets guidance 2000, this will be discussed with the GC and a cut-off date of 2000 will be applied.
		 Conference abstracts will be excluded as they do not provide sufficient information to evaluate risk of bias/quality of study.
		Non-English language articles.
11.	Context	No previous guidelines will be updated by this review question.
12.	Primary outcomes (critical outcomes)	We will extract the 2-by-2 tables from the studies where it is reported directly or calculate it from the reported data (for example, sensitivity, specificity, LR+, LR-) where possible in those studies that do not report the 2-by-2 data directly. From these data we will calculate and report:
		 Sensitivity and specificity of signs and symptoms (as indicators of abuse).
		 Positive predictive value (of signs and symptoms).
		 Negative predictive value (of signs and symptoms).
		Studies where we cannot extract or calculate the 2-by-2 table that report sensitivity and specificity and/or PPV and NPV will also be included.
13.	Secondary outcomes (important outcomes)	No secondary outcomes were identified by the GC.
14.	Data extraction (selection and coding)	Sifting, data extraction, appraisal of methodological quality and GRADE for DTA assessment will be performed by the systematic reviewer. Resolution of any disputes will be with the senior systematic reviewer and the Topic Advisor. Quality control will be performed by the senior systematic reviewer.
		Dual sifting will be undertaken for this question for a random 10% sample of the titles and abstracts identified by the search.
15.	Risk of bias (quality) assessment	The methodological quality of each study will be assessed using a preferred checklist. For full details please see section 6.2 of Developing NICE guidelines: the manual

ID F	ield (based on <u>PRISMA-P)</u>	Content
16. S	strategy for data synthesis	If diagnostic accuracy measures are not reported but can be calculated, this will be done. Where 4 or more unbiased studies are included (for example, there is no suggestion that the estimates of accuracy are systematically incorrect) then diagnostic meta-analysis will be conducted using either the hierarchical summary ROC model (when multiple thresholds/different definitions of the presence of a given sign are used in the included studies) or the bivariate model (when the same threshold/definition of the presence of a sign is used in the included studies). Where fewer than 4 studies are included the univariate model will be conducted. We will calculate the PPVs and NPVs of the different signs and symptoms from the meta-analysed sensitivity and specificity estimates for different prevalences (low, medium, high) of abuse. These prevalence categories which will be determined from the literature (for example, by using the lowest, highest and median observed prevalences in the included studies) and/or in consultation with the GC.
17. A	nalysis of sub-groups	Subgroup analysis will be conducted wherever possible, for example if appropriate data are reported in relation to: • People with and without a dementia diagnosis. • Different age groups (younger adults and older old). • People with learning disabilities. • People with a 'high functioning' autistic spectrum condition. • Lesbian, gay, bi-sexual and transgender people. • People with severe physical disabilities. • People living in different types of care home (for example, with and without nursing care). • Care home residents and non-residents.
18. T	ype and method of review	Diagnostic

ID	Field (based on PRISMA-P)	Content	
27.	Conflicts of interest	All guideline committee members and anyone who has direct input into NICE guidelines (including the evidence review team and expert witnesses) must declare any potential conflicts of interest in line with NICE's code of practice for declaring and dealing with conflicts of interest. Any relevant interests, or changes to interests, will also be declared publicly at the start of each guideline committee meeting. Before each meeting, any potential conflicts of interest will be considered by the guideline committee Chair and a senior member of the development team. Any decisions to exclude a person from all or part of a meeting will be documented. Any changes to a member's declaration of interests will be recorded in the minutes of the meeting. Declarations of interests will be published with the final guideline.	
28.	Collaborators	Development of this systematic review will be overseen by an advisory committee who will use the review to inform the development of evidence-based recommendations in line with section 3 of Developing NICE guidelines: the manual . Members of the guideline committee are available on the NICE website: https://www.nice.org.uk/guidance/indevelopment/gid-ng10107

24.	Named contact	5a. Named contact National Guideline Alliance 5b Named contact e-mail SafeguardingAdults@nice.org.uk 5c Organisational affiliation of the revien National Institute for Health and Care Exception		ional Guideline Alliance
25.	Review team members	From the National Guideline Alliance: • Jennifer Francis [Technical lead] • Ted Barker [Technical analyst] • Fiona Whiter [Technical analyst] • Ifigeneia Mavranezouli [Health economi • Elise Hasler [Information scientist]	st]	
26.	Funding sources/sponsor	This systematic review is being completed receives funding from NICE.	d by the National Guide	eline Alliance which
27.	Conflicts of interest	All guideline committee members and anyone who has direct input into NICE guidelines (including the evidence review team and expert witnesses) must declare any potential conflicts of interest in line with NICE's code of practice for declaring and dealing with conflicts of interest. Any relevant interests, or changes to interests, will also be declared publicly at the start of each guideline committee meeting. Before each meeting, any potential conflicts of interest will be considered by the guideline committee Chair and a senior member of the development team. Any decisions to exclude a person from all or part of a meeting will be documented. Any changes to a member's declaration of interests will be recorded in the minutes of the meeting. Declarations of interests will be published with the final guideline.		
28.	Collaborators	Development of this systematic review will use the review to inform the development section 3 of Developing NICE guidelines: are available on the NICE website: [NICE	of evidence-based rec the manual. Members	ommendations in line with

31.	Dissemination plans	 NICE may use a range of different methods to raise awareness of the guideline. These include standard approaches such as: Notifying registered stakeholders of publication. Publicising the guideline through NICE's newsletter and alerts. Issuing a press release or briefing as appropriate, posting news articles on the NICE
		website, using social media channels, and publicising the guideline within NICE.
32.	Keywords	
33.	Details of existing review of same topic by same authors	[Give details of earlier versions of the systematic review if an update of an existing review is being registered, including full bibliographic reference if possible. NOTE: most NICE reviews will not constitute an update in PROSPERO language. To be an update it needs to be the same review question/search/methodology. If anything has changed it is a new review]
34.	Current review status	☐ Ongoing

Appendix B – Literature search strategies

Literature search strategies for review question A:

A combined search was conducted for the following 2 review questions:

- What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

Appendix C - Evidence study selection

Study selection for review question A:

- What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

Figure 1: Study selection flow chart Titles and abstracts identified, N=4285 Full copies retrieved Excluded, N=4241 and assessed for (not relevant population, eligibility, N=44 design, intervention, comparison, outcomes, unable to retrieve) Publications included Publications excluded in review, N=0 from review, N=44 (refer to excluded studies list)

Appendix D – Evidence tables

Evidence tables for review question A:

- What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

No evidence was identified which was applicable to these 2 review questions.

Appendix E – Forest plots

Forest plots for review question A:

- What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

Appendix F – GRADE tables

GRADE tables for review question A:

- What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

Appendix G – Economic evidence study selection

Economic evidence study selection for review question A:

- What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

A global economic literature search was undertaken for safeguarding adults in care homes. This covered all 16 review questions, which were reported in 9 evidence reports in this guideline. As shown in Figure 2 below, no economic evidence was identified which was applicable to this evidence review.

Figure 2: Economic study selection flow chart

Appendix H – Economic evidence tables

Economic evidence tables for review question A:

- What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

Appendix I – Economic evidence profiles

Economic evidence profiles for review question A:

- What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

Appendix J – Economic analysis

Economic evidence analysis for review question A:

- What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

No economic analysis was conducted for these 2 review questions.

Appendix K – Excluded studies

Excluded studies for review question A:

- What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

Economic studies

No economic evidence was identified for these 2 review questions.

Appendix L - Research recommendations

Research recommendations for review question A:

- What indicators should alert people to abuse in care homes?
- What indicators should alert people to neglect in care homes?

Why this is important

There is evidence from the UK and internationally that identifies self-neglect as an important safeguarding issue for older people. Self-neglect is known to have negative impacts on health and wellbeing and in some cases can contribute to care home admission. However, there are no published studies of self-neglect amongst care home residents and no guidance on how to identify this. The gap in evidence reflects a wider lack of research evidence about the indicators of abuse and neglect in care homes, which was identified by this review.

Studies of how to identify self-neglect in care homes are needed because the causes and consequences of self-neglect in care homes are likely to be different from the causes and consequences of self-neglect that occurs in the individuals' own home.

All self-neglect poses challenges in relation to the balance between an individual's right to make (unwise) choices and their mental capacity. Self-neglect within a care home may also (i) raise additional questions about the balance between individual choice and the service providers' duty of care; (ii) have implications for the safety, health and wellbeing of other residents, staff and visitors; (iii) expose service providers and their staff to false allegations of abuse and neglect.

The views of a wide range of stakeholders are needed. A study with an emphasis on identifying indicators, could begin to provide the evidence on which to develop future practice guidelines.

Research recommendation in question format:

What are the indicators of self-neglect among care home residents?

Table 6: Research recommendation rationale

	hat are the indicators of self-neglect among are home residents?
Importance to 'patients' or the population Se of as un in ca ho an the	elf-neglect is both a cause and a consequence poor physical and mental health; it is often sociated with social isolation. A better iderstanding of how best to identify self-neglect care homes is needed. This is because the suses and consequences of self-neglect in care of self-neglect in care of consequences of self-neglect that occurs in the individuals own home. It is known needotally) that people may be placed in care

¹ Braye, S., Orr, D., Preston-Shoot, M., The governance of adult safeguarding: findings from research, The Journal of Adult Protection, 14, 55-72, 2012

Research question	
	What are the indicators of self-neglect among care home residents?
Relevance to NICE guidance	The research will inform improved guidance about how best to identify self-neglect in care home settings. The current guideline on Safeguarding adults in care homes has only been able to make 1 recommendation on this issue because of a lack of evidence.
Relevance to social care and the NHS	The Care Act 2014 creates statutory duties in relation to adult safeguarding; self-neglect is included within the definition of abuse and neglect which should trigger enquiries. The response to a safeguarding referral involving self-neglect may be complicated by questions of mental capacity (or lack thereof – see NICE guideline 108) and, where self-neglect occurs in a care home setting, this is further confounded by the need to consider the safety and wellbeing of other residents.
	Self-neglect can have serious physical and mental health consequences, leading to hospital admissions. A better understanding of how to identify self-neglect could reduce such hospital admissions.
National priorities	The importance of this issue is reflected in the following legislation and national guidance:
	Care Act 2014: Care and support statutory guidance. Part 14: Safeguarding (Updated 26 October 2018) https://www.gov.uk/government/publications/care-act-statutory-guidance/care-and-support-statutory-guidance#safeguarding-1
	Mental health and wellbeing: JSNA toolkit. <i>Part 7: Living well in older years</i> (Updated 25 October 2019) https://www.gov.uk/government/publications/better-mental-health-jsna-toolkit/7-living-well-in-older-years
	Hoarding disorders: NHS Health A to Z https://www.nhs.uk/conditions/hoarding-disorder/
Current evidence base	This review demonstrated a lack of evidence about the indicators which should alert people to neglect in care homes. Although there is a small evidence base about self-neglect in people's own homes, no studies have yet explored the phenomenon of self-neglect in care homes, though it is known to occur. Safeguarding adults reviews report provide a potentially valuable source of evidence.
Equality	The group thought to be most at risk of self- neglect are older people, particularly those who are socially isolated. However, other people who use adult social care services may also be affected, including people living with dementia, people with learning disabilities and people with mental health problems.

Research question	What are the indicators of self-neglect among care home residents?
Feasibility	The key challenge will be to <i>identify</i> and gain access to care homes which have experienced the phenomenon of residents who self-neglect and/or residents who have been placed in the home because of self-neglect in their own home.
	There are ethical considerations as this is a highly sensitive topic. Any study would need ethical approval from the Social Care Research Ethics Committee or local ethics committees (for example in universities or local authorities).
Other comments	

Table 7: Research recommendation modified PICO table

	Explanation
Population	People living in registered care homes displaying signs or symptoms of self-neglect.
Intervention/ exposure/ test	 Signs and symptoms for which diagnostic accuracy data are located might include but will not be limited to: Physical effects on the individual (such as weight changes, dehydration, malnutrition, sleep problems). Emotional and psychological effects on the individual (such as behaviour changes, for example, withdrawal, mood changes, clinical depression, social isolation). Effects on the care home environment (such as offensive odours, use of physical or chemical restraint, sharing or communal use of residents' personal items). Effects on the performance of the care home (such as rates of emergency hospital admission).
Comparator/ reference standard	The findings of a safeguarding review which confirms self-neglect.
Outcomes	 Sensitivity and specificity of signs and symptoms (as indicators of self-neglect). Positive predictive value (of signs and symptoms). Negative predictive value (of signs and symptoms).
Study design	Prospective or retrospective cohort design
Timeframe	No specified timeframe for the conduct of this proposed research.
Additional information	None
