

1           **NATIONAL INSTITUTE FOR HEALTH AND CARE**  
2   **EXCELLENCE**

3   **Guideline**

4           **Looked-after children and young people**

5   **Draft for consultation, April 2021**  
6

This guideline covers how organisations, professionals and carers can work together to deliver high quality care, stable placements and nurturing relationships for looked-after children and young people. It aims to help these children and young people reach their full potential and enjoy the same opportunities in life as their peers.

This guideline will update and replace NICE public health guideline 28 (published October 2010).

**Who is it for?**

- Social care, health and education practitioners working with looked-after children and young people and care leavers
- Commissioners and managers, policy makers and providers in the NHS, health and social care, public health and local authorities, and third-sector organisations
- Commissioners, managers and providers of residential accommodation and housing for looked-after children and young people and care leavers
- Foster care agencies
- Criminal justice system, including police
- Looked-after children and young people and care leavers
- Birth parents, foster carers, corporate parents and prospective adoptive parents.

### **What does it include?**

- the recommendations
- recommendations for research
- rationale and impact sections that explain why the committee made the recommendations and how they might affect practice
- the guideline context.

Information about how the guideline was developed is on the [guideline's webpage](#). This includes the evidence reviews, the scope, details of the committee and any declarations of interest.

Development of this guideline began before the COVID-19 pandemic. We have aimed to ensure that the recommendations take into account COVID-19 where possible. But please tell us if there are any particular issues relating to COVID-19 that we should consider when finalising the guideline for publication.

## 1 **Context**

2 As of 31 March 2020, there are 80,080 looked-after children and young people in  
3 England. The most common reason for becoming looked after was abuse or neglect  
4 (65%). The majority of looked-after children are cared for in foster placements (72%),  
5 with 14% in connected care, and 13% in residential care, secure units, or semi-  
6 independent living accommodation. In addition to these, 7% of looked-after children  
7 still live with birth parents.

8 Overall, looked-after children and young people have poorer outcomes in many  
9 areas than the general population, including mental and physical health, education  
10 and offending rates. The rate of mental health disorders in the general population  
11 aged 5 to 15 is 10%. However, for those who are looked-after it is 45%, and 72% for  
12 those in residential care. In addition, frequent placement moves can keep looked-  
13 after children and young people from receiving the support they need by disrupting  
14 treatment plans and access to services. Frequent placement moves are linked to  
15 poorer mental health and a lessened sense of belonging. Key [statutory guidance for  
16 promoting the health and wellbeing of looked-after children](#) is available from the  
17 Department for Education and Department of Health and Social Care.

18 Looked-after children are at a greater risk of poor educational outcomes. In 2019,  
19 55.9% of looked-after children had a special educational need compared with 14.9%  
20 of all children. At key stage 2, 37% of looked-after children and young people  
21 reached the expected standard in reading, writing and maths (compared with 65% of  
22 those who were not looked-after). The higher prevalence of special educational  
23 needs among looked-after children and children in need in part explains this  
24 difference. As of 2018, the rate of permanent exclusions for looked-after children has  
25 fallen and is now less than the rate for all children. However, looked-after children  
26 and young people continue to be significantly over-represented in the criminal justice  
27 system. Around half of the children currently in custody in England and Wales have  
28 been in care at some point. Looked-after children and young people are currently  
29 entitled to a pupil premium grant to support their education. This and other statutory  
30 guidance for the education of looked-after children can be found in [The Department  
31 for Education's information on promoting the education of looked-after and previously  
32 looked-after children](#).

1 Once a child enters care, a home placement will be sought which is the right  
2 placement for the child or young person. Unfortunately, as of December 2019, while  
3 the number of children entering care has been rising year after year, the number of  
4 children ceasing to be looked-after during the year due to adoption has been falling  
5 down to 3,570 from a peak of 5,360 in 2015. Statutory support for the transition out  
6 of care into adoption, including preparing adopters and arranging contact, is outlined  
7 in the [Department for Education's statutory guidance on adoption](#).

8 From 31 March 2019, the number of young people aged 16 and over leaving care to  
9 move into independent living has risen each year from 3,720 in 2015, to 4,560 in  
10 2017, to 4,680 in 2019. Care leavers as a group also have poorer outcomes on key  
11 measures such as housing, health, employment, and continuing in education and  
12 training post-16. For 19 to 21-year olds, 6% were known to be in higher education,  
13 21% were in other education, 25% were in training or employment and 39% were not  
14 in education, employment or training (compared with around 12% of all young people  
15 aged 19 to 21 years). Statutory support for care leavers, including the provision of a  
16 [personal adviser](#) for all care leavers, can be found in the [Department for Education's  
17 Children's Act 1989 guidance and regulations \(volume 3\)](#).

18 Local authorities have a duty to support looked-after children and young people.  
19 Sectors cooperate to produce individual care plans covering health, education and  
20 placement. In addition, clinical commissioning groups, NHS England and Public  
21 Health England have a duty to support local authorities to meet their health needs.  
22 The [Children Act 2004](#), the [Care Standards Act 2000](#), [The Care Planning, Placement  
23 and Case Review Regulations 2010](#), the [Children and Social Work Act 2017](#) and  
24 accompanying regulations and statutory guidance provide the legal framework for  
25 local authorities, providers of fostering services and children's homes. Other relevant  
26 safeguarding legislation and statutory guidance includes the [Safeguarding  
27 Vulnerable Groups Act 2006](#), and the [Department for Education's working together to  
28 safeguard children](#) and [keeping children safe in education](#).

29 The original NICE guideline on looked-after children duplicated existing statutory  
30 guidance. This update focuses more on the specific interventions needed to help  
31 [practitioners](#) improve outcomes for looked-after children and young people, as well  
32 as how statutory care is best delivered. It complements existing national statutory

1 guidance, which focuses more on service delivery. It also recognises that looked-  
2 after children and young people experience inequality and these recommendations  
3 seek to ensure that their needs are adequately met. This requires special attention  
4 and expertise.

5 The guideline covers support provided to looked-after children and young people and  
6 care leavers (from birth to age 25), and their families and [carers](#) (including birth  
7 parents, [connected carers](#), [special guardians](#) and prospective adoptive parents).  
8 This includes all who are classed as 'looked-after' under a full or interim local  
9 authority care order, whether temporary or long term. For example, it covers looked-  
10 after children and young people on remand, and children and young people  
11 preparing to leave care. The guideline covers all parts of the care pathway, from  
12 entry of looked-after people into the care system, to support provided when moving  
13 out of care into [permanency](#) and out of care into independent living.

14 The guideline does not cover children and young people who have moved out of  
15 care and are no longer looked-after (not including care leavers) – that is, those who  
16 have been successfully adopted or reunified with birth parents. It also does not cover  
17 those on the edge of care and their families.

## 18 **Impact of COVID-19**

19 The guideline committee wished to acknowledge that the impacts of the COVID-19  
20 pandemic on looked-after children, young people's mental and emotional health and  
21 wellbeing, as well as their educational progress, cannot be underestimated.

22 Although children have been less affected by the virus in terms of infection and  
23 mortality rates, the committee raised concerns about lost learning and greater  
24 safeguarding risks to this vulnerable group during lockdown. COVID-19 has  
25 disrupted practitioners' relationships with children and families and the longer-term  
26 impact on the voluntary and charitable sector, is unknown.

27 Implementing new ways of working, reconfiguring services to meet evolving social  
28 distancing requirements and offering emergency support has resulted in increased  
29 cost pressures on local authorities. The impact of the pandemic on vulnerable  
30 groups outside of the care system such as those experiencing domestic abuse and

- 1 neglect and families suffering financially, has also led to increased referrals to
- 2 children's social care, adding greater burden to the system.

### 3 **Recommendations**

People have the right to be involved in discussions and make informed decisions about their care, as described in [NICE's information on making decisions about your care](#).

[Making decisions using NICE guidelines](#) explains how we use words to show the strength (or certainty) of our recommendations, and has information about prescribing medicines (including off-label use), professional guidelines, standards and laws (including on consent and mental capacity), and safeguarding.

4

This guideline should be read alongside [NICE's guideline on children's attachment](#).

#### 5 **1.1 Diversity**

- 6 1.1.1 Ensure that looked-after children and young people from groups that have
- 7 particular needs are not marginalised and that their needs are adequately
- 8 met. These groups include those from black, Asian, and other minority
- 9 ethnic groups and Gypsy, Roma and Traveller communities, as well as
- 10 other groups such as refugees and, asylum seekers and those who
- 11 identify as LGBTQ+.

For a short explanation of why the committee made this recommendation and how it might affect practice, see the [rationale and impact section on diversity](#).

Full details of the evidence and the committee's discussion are in [evidence review D: barriers and facilitators for supporting positive relationships among looked-after children and young people](#).

## 1.2 Supporting positive relationships

### 2 Defining positive relationships

3 1.2.1 The [care network](#) around a looked-after child or young person should  
4 consist of positive relationships. These are supported by:

- 5 • genuine caring – being treated by carers as 'one of their own'
- 6 • availability – being there when needed
- 7 • reliability – providing promised support in a timely manner
- 8 • listening that is active and non-judgemental
- 9 • continuity of relationships
- 10 • promoting agency and shared decision making that is appropriate to
- 11 developmental age
- 12 • providing well-communicated and fair discipline and boundaries
- 13 • persistence and understanding despite challenging behaviour
- 14 • positive role models who offer guidance.

### 15 Sibling relationships

16 1.2.2 Consider interventions to improve the relationship between siblings in  
17 care, including biological siblings who live apart and non-biological  
18 siblings who live together (for example, other looked-after children or  
19 young people on placement, and the carer's biological or adopted  
20 children). Take into account safeguarding issues and the looked-after  
21 child or young person's preferences.

22 1.2.3 For primary-school-aged children, or those needing greater assistance,  
23 ensure that the primary carer is present during interventions to improve  
24 relationships between siblings in care. Components of this intervention  
25 should include:

- 26 • structured conversation around relationships and conflict resolution
- 27 • incentivised cooperation, for example shared activities and outings to
- 28 reward [prosocial](#), cooperative behaviour
- 29 • shared activities with coaching in prosocial skills using [life story work](#).

1 1.2.4 Consider relationship coaching independently from the carer for  
2 adolescent siblings in care.

3 1.2.5 Offer carers support to help them understand and maintain stable sibling  
4 relationships before offering interventions to improve the relationship  
5 between siblings in care.

## 6 **Relationships with the birth family**

7 1.2.6 Provide [contact supervisors](#) for contact with birth families if this is  
8 necessary for safeguarding or if it will help support the relationship  
9 between the looked-after child or young person and the birth family.  
10 Ensure that the looked-after person always has the same contact  
11 supervisor if possible.

12 1.2.7 Contact supervisors should receive training in:

- 13 • safeguarding the looked-after child or young person, including trauma-  
14 informed training in recognising signs of distress (including in babies  
15 and in children not yet able to talk)
- 16 • providing emotional support for the looked-after person, including on  
17 transition to and from contact with the birth family
- 18 • providing support for and feedback to birth parents to help them build  
19 positive relationships during contact
- 20 • knowing when to support, and how to reduce support when necessary
- 21 • record keeping and sharing information with the broader care team.

22 1.2.8 Consider the need for more intense contact supervision (in terms of  
23 monitoring and feedback provided) between the birth family and looked-  
24 after child or young person in the early stages of care placements, with  
25 reduced intensity as needs decrease over time.

26 1.2.9 Provide interpreting services for contact supervisors if those taking part in  
27 contact are non-English speaking. Consider any additional communication  
28 support as needed, for example, sign language.

1 1.2.10 Think about using text, email or social media to support contact for  
2 looked-after children and young people. However, safeguarding plans  
3 should also take account of the possibility of ongoing unmonitored online  
4 contact and ensure that the time spent in digital or social media contact  
5 and the content of these interactions is appropriate.

## 6 **Relationships with social workers**

7 1.2.11 Support the looked-after child or young person's allocated social worker,  
8 to reduce professional turnover. Support could include, for example:

- 9 • supervision with regular meetings to check on the wellbeing of workers,  
10 and reflect on practices that promote positive relationships (see  
11 [recommendation 1.2.1](#))
- 12 • consultation for complex and specialist problems (see [recommendation](#)  
13 [1.4.3](#))
- 14 • trauma-informed training in communication skills to support positive  
15 relationships (see also [recommendation 1.3.17](#)).

16 1.2.12 Managers of social workers should use and review ways of working to  
17 reduce duplication of effort, increase staff retention, and enable more one-  
18 to-one time between social workers and looked-after children and young  
19 people (for example, by improving administrative support).

20 1.2.13 Local authorities should collect and review data on staff turnover to  
21 assess the impact on looked-after children and young people and the  
22 success of existing staff support systems. They should use these data to  
23 inform action plans to support greater continuity of [practitioners](#) working  
24 directly with looked-after people and care leavers.

25 1.2.14 If possible, social workers should tell looked-after children, young people,  
26 care leavers, and primary carers pre-emptively, and in a manner  
27 appropriate to developmental age, about upcoming changes in their job  
28 that will affect their relationship with the looked-after person. Recognise  
29 the emotional impact of such changes and provide an opportunity to say  
30 goodbye.

## 1 **Mentoring**

2 1.2.15 Consider programmes (with professional oversight) to support mentoring  
3 relationships. For example, by pairing looked-after young people with near  
4 peers with care experience to provide positive role models, particularly for  
5 looked-after young people with social, emotional and mental wellbeing  
6 needs.

## 7 **Friendship**

8 1.2.16 Think about providing funding to support contact with friends (for example,  
9 for travel or activities), particularly for friendships that existed before the  
10 looked-after child or young person entered care.

## 11 **Placement stability**

12 1.2.17 Provide out-of-hours support services (separate from those provided for  
13 carers) for looked-after children and young people to help resolve urgent  
14 problems, for example through social workers 'on call', voluntary or  
15 independent agency helplines, or advocacy organisations.

16 1.2.18 Discuss the priorities and needs of carers sensitively and transparently  
17 with the looked-after child or young person in a manner that takes into  
18 account the looked-after child or young person's developmental age. For  
19 example, if placements are at risk of breakdown, social workers should  
20 facilitate communication between the carers and the looked-after person  
21 (and birth parents if relevant) to try to resolve problems.

22 1.2.19 If a placement changes:

- 23 • Discuss the reasons for this with the looked-after child or young person  
24 in a way they can understand and that is appropriate to their  
25 developmental age.
- 26 • Offer the person emotional support, if possible by a practitioner they  
27 have an existing relationship with.
- 28 • Use ongoing life story work to help them process changes in  
29 placement.

## 1 **Serious behavioural problems**

- 2 1.2.20 Consider [multidimensional treatment foster care](#) for looked-after  
3 adolescents with a history of persistent offending behaviour.

## 4 **Disorganised attachment**

- 5 1.2.21 For guidance on [attachment](#) difficulties, follow [NICE's guideline on](#)  
6 [children's attachment](#).

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on supporting positive relationships](#).

Full details of the evidence and the committee's discussion are in [evidence reviews A: interventions to support care placement stability for looked-after children and young people, B: barriers and facilitators for supporting care placement stability among looked-after children and young people, C: interventions to support positive relationships for looked-after children, young people and care leavers, D: barriers and facilitators for supporting positive relationships among looked-after children and young people, and F: interventions to promote physical, mental, and emotional health and wellbeing of looked-after children, young people and care leavers](#).

## 7 **1.3 Valuing carers**

- 8 These recommendations cover support for primary [carers](#), including [foster carers](#),  
9 [special guardians](#), [connected carers](#), key workers in residential care, and birth  
10 parents (when the looked-after child or young person is placed with the birth parent).

### 11 **Supporting and involving carers**

- 12 1.3.1 Involve and value the carer's input in decision making in the broader care  
13 team, and keep carers fully informed about a looked-after child or young  
14 person's care plan.
- 15 1.3.2 Provide out-of-hours support services for carers to help resolve urgent  
16 problems, for example through social workers working 'on call', voluntary

- 1 or independent agency helplines, or carer peer support associations.  
2 Ensure that carers log any help sought outside of usual operational hours  
3 as part of their routine and urgent reports.
- 4 1.3.3 Facilitate peer support for carers at accessible times and places, including  
5 online if people may find it difficult to attend a physical meeting.
- 6 1.3.4 As part of the care plan, think about the need for planned respite care (or  
7 'support care') for carers.
- 8 1.3.5 Ensure that respite care is used in the looked-after child or young  
9 person's best interests and explain this to the looked-after person.
- 10 1.3.6 Use a respite carer who the child or young person is familiar with if  
11 possible, and take into account the skills or training needed to meet the  
12 looked-after person's assessed need.
- 13 1.3.7 Keep carers fully informed and updated about the support services  
14 available to carers and looked-after children and young people in their  
15 local authority.
- 16 1.3.8 Inform the looked-after child or young person's carers about any  
17 interventions used to support the looked-after person, including the  
18 purpose of these interventions.
- 19 1.3.9 For further guidance on support for adult carers, follow [NICE's guideline](#)  
20 [on supporting adult carers](#).

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on supporting and involving carers](#).

Full details of the evidence and the committee's discussion are in [evidence reviews A: interventions to support care placement stability for looked-after children and young people](#), and [B: barriers and facilitators for supporting care placement stability among looked-after children and young people](#).

## 1 Training for carers

2 1.3.10 Plan training for carers so that it is delivered before it is needed. Think  
3 about the need for multiagency involvement in training programmes and  
4 ensure that the organisations involved agree the source of funding  
5 between them.

6 1.3.11 Supervising social workers should work with carers to assess the needs of  
7 the looked-after child or young person to inform and tailor training and  
8 development needs for the carers.

9 1.3.12 Provide a schedule of mandatory training for carers, excluding birth  
10 parents. Ensure that this training covers:

- 11 • Therapeutic, trauma-informed, parenting (covering attachment-  
12 informed, highly supportive and responsive relational care).
- 13 • Safeguarding procedures.
- 14 • How to communicate effectively and sensitively (for example, using de-  
15 escalation techniques).
- 16 • [Life story work](#) to promote a positive self-identity, which has a  
17 consistent, child-focused, and planned approach (see  
18 [recommendations 1.5.15 to 1.5.25](#)).
- 19 • How to be an educational advocate (this part of the training should be  
20 delivered by [practitioners](#) from the [virtual school](#)).
- 21 • Identifying problems with, and supporting, good oral health, diet, and  
22 personal hygiene (particularly among those coming into care).
- 23 • Encouraging positive relationships and sexual identity (covering issues  
24 such as consent, encouraging healthy intimate relationships, 'coming  
25 out' and transitioning).
- 26 • Record keeping and sharing the information in the record with the  
27 looked-after child or young person in a constructive and positive way,  
28 considering the need for confidentiality, and the impact the record may  
29 have on the looked-after person.

30 Training can be delivered in person (for example, at home or in  
31 community group settings) or virtually.

- 1 1.3.13 Provide targeted support and training for birth parents if reunification is a  
2 possibility. This should be provided through transition planning with family  
3 support teams.
- 4 1.3.14 Think about providing tailored training for carers if there are specific needs  
5 related to race, ethnicity, and culture. This could include, for example,  
6 understanding and respecting cultural and religious identity (including  
7 dietary preferences), and understanding specific hair and skin care needs.
- 8 1.3.15 Think about providing tailored training for carers if there are specific needs  
9 relating to special educational needs and disabilities, for example sensory  
10 and communication needs. Training could be provided through specialist  
11 healthcare teams and voluntary organisations.
- 12 1.3.16 Based on the individual needs of the looked-after child or young person,  
13 consider more intensive training methods for carers to support the delivery  
14 of therapeutic, trauma-informed caregiving. These methods should use  
15 video feedback, coaching and observation, roleplay, and follow-up booster  
16 sessions and be delivered by trained facilitators.
- 17 1.3.17 Ensure that trauma-informed training covers:
- 18 • understanding behaviour as a form of communication and as a  
19 response to trauma
  - 20 • understanding, recognising and processing triggers for trauma  
21 responses
  - 22 • understanding [attachment](#) and loss.
- 23 1.3.18 Ensure that trainers for carers are trauma-informed and have a good  
24 understanding of attachment issues and therapeutic approaches.
- 25 1.3.19 Ensure that new permanent or long-term carers are trained and prepared  
26 so that there is continuity of care and support, including therapeutic  
27 support if needed, between placements.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on training for carers](#).

Full details of the evidence and the committee's discussion are in [evidence reviews A: interventions to support care placement stability for looked-after children and young people, B: barriers and facilitators for supporting care placement stability among looked-after children and young people, and C: interventions to support positive relationships for looked-after children, young people and care leavers](#).

## 1 1.4 Safeguarding

2 1.4.1 Local authorities should facilitate a multidisciplinary approach to  
3 safeguarding looked-after children and young people. This approach  
4 should:

- 5 • include multiagency safeguarding meetings
- 6 • facilitate the sharing of data between agencies
- 7 • seek the views of looked-after children and young people and their  
8 [carers](#), to ensure that responses to safeguarding risks are effective and  
9 acceptable; for example, by coordinating safeguarding responses for  
10 siblings in care.

11 1.4.2 Hold safeguarding meetings to bring together [practitioners](#) from multiple  
12 agencies involved in the care and support of looked-after children and  
13 young people such as: social care; fostering, residential and connected  
14 care; education and the [virtual school](#); healthcare; voluntary agencies;  
15 housing services; emergency services; policing; and immigration.

16 1.4.3 Use safeguarding meetings as an opportunity to review the case files for  
17 looked-after children and young people, share expertise and standardise  
18 tools used for risk assessments.

19 1.4.4 Local authorities should seek specialist support to address safeguarding  
20 risks outside the home ([contextual safeguarding](#)), exploitation, and

1 children missing in care. This practitioner should lead and facilitate review  
2 meetings and build clear lines of accountability. The practitioner could be,  
3 for example, a missing person’s coordinator or another trauma-informed  
4 specialist with knowledge of exploitation and safeguarding issues in the  
5 looked-after population.

6 1.4.5 Assess the safeguarding risk of a looked-after child or young person using  
7 data shared across agencies. This could include data on vulnerabilities:

- 8 • at the individual level (such as those captured by risk assessment  
9 tools)
- 10 • at the group level (red flags specific to subpopulations such as young  
11 girls, trafficked children and unaccompanied asylum seekers)
- 12 • at the community level (gathered from community-level health and  
13 mental health data, area deprivation indexes, number of county lines  
14 operating in a single area, and area-specific missing person reports).

15 1.4.6 Use training and review meetings to ensure that practitioners and carers  
16 working directly with looked-after children and young people are:

- 17 • able to recognise critical moments for looked-after people; that is, times  
18 when they may be more open to change and receiving help
- 19 • aware of the early signs of, and risk factors for, gang affiliation,  
20 exploitation and going missing
- 21 • familiar with how to report concerns.

22 1.4.7 Promote positive relationships (including broader relationships such as  
23 those with carers, siblings and practitioners) as the main way to prevent  
24 exploitation and children going missing from care (see [recommendation](#)  
25 [1.2.1](#)).

26 1.4.8 Provide tailored support for the looked-after child or young person to  
27 prevent exploitation by addressing issues specific to young girls, trafficked  
28 children, and unaccompanied asylum seekers (for example, addressing  
29 issues of self-esteem, domestic violence, negative relationships, previous  
30 exploitation).

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on safeguarding](#).

Full details of the evidence and the committee's discussion are in [evidence review G: barriers and facilitators for promoting physical, mental and emotional health and wellbeing of looked-after children and young people and care leavers](#).

## 1 1.5 Health and wellbeing

### 2 Building expertise in local authorities about trauma and raising 3 awareness

4 1.5.1 Ensure that all [practitioners](#) working with looked-after children and young  
5 people are aware of the impact of trauma (including developmental  
6 trauma) and [attachment](#) disorders and appropriate responses to these, to  
7 help them build positive relationships and communicate well.

8 1.5.2 Tell practitioners and [carers](#) working with unaccompanied asylum seekers  
9 about the issues that affect this group, including health risks, safeguarding  
10 issues, language and culturally sensitive care needs, and the danger of  
11 going missing.

12 1.5.3 Local authorities should ensure there is sufficient specialist social worker  
13 expertise to support, and provide consultation for, looked-after children  
14 and young people with more complex needs. This could be provided  
15 through more intensive (responsive) trauma-informed training, or by  
16 sharing expertise across agencies.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on building expertise about trauma and raising awareness](#).

Full details of the evidence and the committee's discussion are in [evidence reviews C: interventions to support positive relationships for looked-after children, young people and care leavers, D: barriers and facilitators for supporting positive](#)

[relationships among looked-after children and young people, and E: interventions and approaches to support practitioners in completing physical and mental health and wellbeing assessments \(and act on findings during the care journey\) for looked-after children and young people.](#)

## 1 **Physical and mental health and wellbeing assessments**

2 1.5.4 When a child or young person enters care, social workers should:

- 3
- 4 • Ask for the birth parents' consent to access the parents' birth records and health information. If they consent, they should seek information from the hospital of birth about the birth mother's health in pregnancy.
  - 5
  - 6 • Ask the birth parents to complete a parental health questionnaire.

7 All this information should be available in time for the looked-after  
8 person's [initial health assessment](#).

9 1.5.5 Ensure that reviews of health assessments for a looked-after child or  
10 young person are carried out by the same healthcare professional each  
11 time, if possible.

12 1.5.6 Healthcare professionals should compile an indexed history of the looked-  
13 after child or young person's health records to give practitioners and  
14 carers a clear sense of their past, present, and likely future physical and  
15 mental health needs. Create a summary for ease of reading, with  
16 references to sections that give more detail.

17 1.5.7 Be aware that care leavers are very likely to request access to their health  
18 and social care records. Practitioners should ensure that the language  
19 used in the records and the way events are captured are sensitive and  
20 empathetic.

21 1.5.8 Offer a culturally appropriate, registered interpreter to communicate in  
22 person with looked-after children and young people for the initial health  
23 assessment if language is a barrier to communication. If language  
24 remains a barrier to communication, think about the need for a culturally

1 appropriate, registered interpreter to be available in person for  
2 subsequent health and social care assessments.

3 1.5.9 Offer unaccompanied asylum seekers tailored initial health assessments  
4 that address risks arising from their country of origin and journey to the  
5 UK. Include:

- 6 • diet and nutrition, including nutritional deficiencies such as vitamin D  
7 deficiency
- 8 • gastrointestinal symptoms
- 9 • oral health
- 10 • tuberculosis screening and general immunisation status
- 11 • sexual health, tailored to the individual (for example, testing for sexually  
12 transmitted diseases; and being aware of signs of assault and abuse,  
13 including abuse linked to faith and culture such as female genital  
14 mutilation and breast flattening)
- 15 • other infectious diseases and bloodborne infections, for example HIV  
16 and hepatitis testing
- 17 • sensory issues not previously identified because of lack of screening,  
18 for example hearing, vision, or mobility problems
- 19 • a formal assessment of mental health
- 20 • sleep disturbances.

21 1.5.10 After the initial health assessment for looked-after children and young  
22 people, consider the need for an additional specialist mental and  
23 emotional health assessment, particularly for babies and children, once  
24 the looked-after person has begun to form a relationship with the primary  
25 carer.

26 1.5.11 Healthcare professionals responsible for the care of looked-after children  
27 and young people should audit whether care recommendations in the  
28 [health plan](#) have been completed, checking with the professionals  
29 concerned across agencies.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on physical and mental health and wellbeing assessments](#).

Full details of the evidence and the committee's discussion are in [evidence review E: interventions and approaches to support practitioners in completing physical and mental health and wellbeing assessments \(and act on findings during the care journey\) for looked-after children and young people](#).

## 1 **Mental health and child and adolescent mental health services**

2 1.5.12 To avoid delays in care, provide intermediate therapeutic or specialist  
3 support for the [care network](#) around looked-after children and young  
4 people who are on a waiting list for child and adolescent mental health  
5 services (CAMHS), for example a specialist outreach team. This should  
6 not be used as a replacement for CAMHS.

7 1.5.13 Offer a range of dedicated CAMHS, tailored to the needs of looked-after  
8 children and young people. Offer preventive services based on assessed  
9 need (see [recommendation 1.5.10](#)), with timely delivery to prevent serious  
10 mental health problems that need tier 3 or 4 specialist services.

11 1.5.14 Provide specialist, trauma-informed mental health and emotional  
12 wellbeing support for unaccompanied asylum seekers. Take into account  
13 cultural sensitivities (for example, the different perspectives of  
14 unaccompanied asylum seekers about mental health services) and that  
15 symptoms of trauma could come to the surface over the long term.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on mental health and child and adolescent mental health services](#).

Full details of the evidence and the committee's discussion are in [evidence reviews F: interventions to promote physical, mental, and emotional health and wellbeing of looked-after children, young people and care leavers, and G: barriers](#)

[and facilitators for promoting physical, mental and emotional health and wellbeing of looked-after children and young people and care leavers.](#)

## 1 Life story work for identity and wellbeing

- 2 1.5.15 Start [life story work](#) as soon as possible after the looked-after child or  
3 young person enters care to support care placement and emotional  
4 stability, rather than as an intervention to deliver once placements are  
5 stable.
- 6 1.5.16 Schedule regular, dedicated times for life story work to help the looked-  
7 after child or young person make sense of their journey through the care  
8 system and beyond, their significant relationships, and their identity.
- 9 1.5.17 Ensure that life story work is done in the setting preferred by the looked-  
10 after child or young person, and conducted by a named carer or  
11 practitioner with whom they have a continuous and close relationship.  
12 This named person may change over the period in care.
- 13 1.5.18 Include the following in life story work for looked-after children and young  
14 people:
- 15 • the present – identity, strengths, and significant relationships
  - 16 • the past – reasons for entering care and for any placement  
17 breakdowns, important memories and relationships
  - 18 • the future – building independence, careers, hopes and dreams.
- 19 1.5.19 Take a flexible approach to life story work, and tailor it to the  
20 developmental age and needs of the looked-after child or young person.  
21 The content could include life mapping, pictures, art, narratives, and toys  
22 or play. Compile life story work in 1 place (such as a ring binder) and build  
23 on this in each session.
- 24 1.5.20 Ensure that life story work for looked-after children and young people  
25 captures and embraces ethnicity, cultural and religious identity, as well as  
26 other personal aspects of identity, for example, sexual identity or  
27 disabilities.

- 1 1.5.21 Ensure that a social worker oversees the life story work if another carer or  
2 practitioner is carrying out the work. For example, the social worker may  
3 share background information to support the carer or practitioner  
4 performing life story work, with the looked-after child or young person's  
5 consent.
- 6 1.5.22 Think about and plan how to carry out life story work for looked-after  
7 children and young people, with sibling groups, in a manner appropriate to  
8 developmental age. This may include:
- 9 • preparing siblings for navigating conversations with older siblings or  
10 siblings not in care
  - 11 • deciding whether it is appropriate to deliver life story work sessions in a  
12 sibling group or individually
  - 13 • determining whether conversations will include sensitive information.
- 14 1.5.23 Ensure the experience and skillset of the practitioner or carer delivering  
15 life story work for looked-after children and young people is sufficient to  
16 deliver good quality work, particularly in complex situations.
- 17 1.5.24 Explain to the looked-after child or young person's wider [support network](#)  
18 that life story work is ongoing, so that they can support it as needed. For  
19 example, if sensitive or emotional information has been discussed with the  
20 child or young person during life story work, schools may need to be  
21 informed.
- 22 1.5.25 Plan regular reviews of how life story work may affect contact  
23 arrangements and the looked-after child or young person's relationship  
24 with their birth family. Use information from these reviews to adjust the  
25 support provided. This could include, for example, involving birth families  
26 in life story work to encourage consistencies in narratives explored, and  
27 helping the looked-after person with reframing previous relationships.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on life story work for identity and wellbeing](#).

Full details of the evidence and the committee's discussion are in [evidence review B: barriers and facilitators for supporting care placement stability among looked-after children and young people](#).

## 1 **Physical touch, relationships, and wellbeing activities**

2 1.5.26 Promote a positive relationship between the primary carer and the looked-  
3 after child or young person as the main way to support social, emotional  
4 and mental wellbeing in looked-after children and young people.

5 1.5.27 When making [safer caring plans](#), think about a looked-after child or young  
6 person's need for physical touch and affection as a part of a healthy  
7 relationship with the primary carer, and their need for play.

8 1.5.28 Develop the interests of looked-after children and young people to help  
9 them develop their identity and to find peer support and new friendships.  
10 Do this by helping them to find, and setting aside time for, outings, interest  
11 groups and other activities that will help them to build skills. These may  
12 include:

- 13 • one-to-one activities accompanied by the primary carer (at least  
14 initially) to promote opportunities for listening and positive relationship  
15 building
- 16 • funded, supported and facilitated activities (such as school clubs, for  
17 example making use of the pupil premium grant) specifically to address  
18 emotional health and wellbeing needs
- 19 • activities or outings to support identity, for example, community support  
20 groups, cultural or religious activities, events or festivals
- 21 • activities to bring together children, carers and practitioners in informal  
22 settings, for example, group outdoor activities.

- 1 1.5.29 For guidance on managing obesity and promoting physical activity, follow  
2 [NICE's guidelines on preventing obesity, identifying, assessing and](#)  
3 [managing obesity, weight management for children and young people](#) and  
4 [physical activity for children and young people](#).

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on physical touch, relationships, and wellbeing activities](#).

Full details of the evidence and the committee's discussion are in [evidence review G: barriers and facilitators for promoting physical, mental and emotional health and wellbeing of looked-after children and young people and care leavers](#).

## 5 **1.6 Learning and education**

### 6 **Readiness for starting or changing school**

- 7 1.6.1 Consider the following to support social competence in looked-after  
8 children:
- 9 • early years education, including playgroups
  - 10 • other opportunities to encourage child-led play.
- 11 1.6.2 Plan bespoke, individual transition support for supporting readiness for  
12 school and resilience in looked-after children and young people moving  
13 between schools and settings (including those moving out of care to  
14 [permanency](#)). This includes:
- 15 • moving from preschool to primary school
  - 16 • moving from primary to secondary school
  - 17 • moving in the middle of a school year
  - 18 • returning to school after an extended absence.
- 19 Individual transition support for school moves may include structured visits  
20 to the school beforehand, school preparation for the [carer](#), meeting the  
21 designated teacher, and handover between designated teachers (for  
22 example, drawing from weekly diaries and [life story work](#)).

- 1 1.6.3 Think about providing multidisciplinary specialist support for transition  
2 between school placements, tailored to the looked-after child or young  
3 person's needs and alongside or part of the [virtual school](#). For example,  
4 including healthcare professionals in transition support for looked-after  
5 people who have medical conditions that affect their education.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on readiness for starting or changing school](#).

Full details of the evidence and the committee's discussion are in [evidence review H: interventions to support readiness for school in looked after children and young people](#).

## 6 **Support in schools**

- 7 1.6.4 Inform looked-after children and young people and their carers of:
- 8 • their rights to educational support, and
  - 9 • the purpose of the pupil premium grant for education and how it is  
10 distributed by the virtual school.
- 11 1.6.5 Schools should ensure that behavioural management policies reflect  
12 trauma-informed practices and cover [attachment](#) issues.
- 13 1.6.6 Schools should ensure that the designated teacher is a consistent  
14 advocate for the looked-after child or young person's educational  
15 progress.
- 16 1.6.7 The designated teacher should:
- 17 • collaborate with school staff (who the looked-after child or young  
18 person is most comfortable with), primary carers and named  
19 practitioners in the personal education plan and the education health  
20 and care plan
  - 21 • provide timely assessment and ongoing monitoring of learning needs,  
22 particularly in times of transition between educational placements

- 1           • refer for specialist support, for example educational psychology, when  
2           needed
- 3           • have regular one-to-one informal conversations with the looked-after  
4           child or young person and their primary carer, at a frequency informed  
5           by the looked-after person.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on support in schools](#).

Full details of the evidence and the committee's discussion are in [evidence reviews G: barriers and facilitators for promoting physical, mental and emotional health and wellbeing of looked-after children and young people and care leavers](#), and [K: barriers to, and facilitators for, supporting learning needs of looked-after children and young people](#).

## 6 **Virtual schools**

- 7   1.6.8     Ensure that the virtual school includes all of the following:
  - 8           • early years expertise
  - 9           • a special educational needs coordinator
  - 10          • a post-16 coordinator.
- 11 1.6.9     Ensure that the virtual school covers early years provision, incorporating  
12           information from nurseries and health visitors (such as the [Ages and](#)  
13           [Stages Questionnaire](#)) and other involved health services. Complete the  
14           early years personal education plan (PEP) and link it to the foundation  
15           stage profile if possible.
- 16 1.6.10    The post-16 coordinator in the virtual school should help looked-after  
17           young people navigate opportunities for training and education (including  
18           further and higher education and apprenticeships) and available funding  
19           streams to support this.

- 1 1.6.11 Ensure that the expertise in the virtual school reflects the needs and  
2 profile of the school-aged population it serves. For example, the  
3 population may include unaccompanied asylum seekers, trafficked  
4 children, children with a history of exploitation, and looked-after children  
5 on remand or in secure settings).
- 6 1.6.12 Make virtual school heads the key enabler for service collaboration and a  
7 link between named specialists in the following:
- 8 • social workers
  - 9 • independent review officers
  - 10 • school admissions and further or higher education admissions
  - 11 • other virtual schools if a looked-after child or young person is placed  
12 out of area
  - 13 • designated [practitioners](#) working with looked-after children and young  
14 people in health services, including mental health services.
- 15 1.6.13 Local authorities should simplify and merge meetings if possible. For  
16 example, annual reviews for looked-after children and young people and  
17 PEP meetings may benefit from occurring together.
- 18 1.6.14 Include healthcare professionals in multiagency review meetings for  
19 looked-after children and young people who have medical conditions that  
20 affect their education.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on virtual schools](#).

Full details of the evidence and the committee's discussion are in [evidence review K: barriers to, and facilitators for, supporting learning needs of looked-after children and young people](#).

## 1 **Improving educational outcomes**

2 1.6.15 To improve educational outcomes, such as literacy and numeracy, in  
3 primary school-aged looked-after children:

- 4 • offer [paired reading](#)
- 5 • consider individual or small group tutoring (for example, by trained  
6 foster carers, trained volunteers, or professional tutors).

7 1.6.16 Ensure that interventions for improving education in secondary school-  
8 aged looked-after young people are regularly evaluated to check they are  
9 appropriate for the user and effective.

10 1.6.17 Assess unaccompanied asylum seekers' language and communication  
11 needs:

- 12 • Offer English language lessons to those who are not fluent in English.
- 13 • Consider intensive English lessons for those with no previous  
14 knowledge of English.

15 1.6.18 Consider the need for virtual schools to increase specialist education  
16 support for unaccompanied asylum seekers. For example, by providing  
17 designated staff members, and additional English for Speakers of Other  
18 Languages (ESOL) support.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on improving educational outcomes](#).

Full details of the evidence and the committee's discussion are in [evidence reviews I: interventions to support learning needs for school-aged looked-after children and young people, and K: barriers to, and facilitators for, supporting learning needs of looked-after children and young people](#).

## 19 **Data collection, sharing, and publication in education**

20 1.6.19 Local authorities should collect and publish information on educational  
21 provision for looked-after children and young people, in particular those

1 missing education (for example, those not in schools with a Department of  
2 Education number, or those on permanent or fixed-term exclusions). This  
3 may include unaccompanied asylum seekers and those with a history, or  
4 high risk of, exploitation.

5 1.6.20 Local authorities should agree and share a strategy for reducing the  
6 number missing education among looked-after children and young people.

7 1.6.21 Local authorities, working with the virtual school, should develop a  
8 mechanism to check the spending of the total pupil premium grant,  
9 beyond the information recorded in the PEP.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on data collection, sharing, and publication in education](#).

Full details of the evidence and the committee's discussion are in [evidence review K: barriers to, and facilitators for, supporting learning needs of looked-after children and young people](#).

## 10 **Further and higher education**

11 1.6.22 Virtual schools should collaborate with universities and colleges to  
12 encourage looked-after young people to aspire to higher or further  
13 education. Ways to do this could include providing:

- 14 • residential experiences and visits to university or college campuses,  
15 mentoring by near peers in higher or further education, and coaching
- 16 • current local opportunities such as university access schemes and  
17 college support programmes.

18 1.6.23 Virtual schools should support a looked-after young person's entry into  
19 careers and training. Ways to do this could include providing:

- 20 • careers support and advice

- 1 • current local opportunities such as work experience placements,  
2 apprenticeships, and internships (particularly those targeted at looked-  
3 after young people and care leavers).

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on further and higher education](#).

Full details of the evidence and the committee's discussion are in [evidence review J: interventions to support entry into further or higher education or training in looked after children and young people](#).

## 4 **1.7 Transition between care placements and to permanent** 5 **placements**

6 These recommendations cover support for all permanent carers, including long-term  
7 [foster carers](#), [special guardians](#), [connected carers](#), adopters and reunified birth  
8 parents.

### 9 **Before transition**

10 1.7.1 When planning transition between care placements, aim to have a good  
11 match between the permanent [carers](#) and the looked-after child or young  
12 person. Assess the child or young person's case history and the carers'  
13 strengths, then discuss relationship dynamics with the person and their  
14 prospective carers.

15 1.7.2 During the transition period, support the foster carer and permanent carer  
16 relationship. Help to manage foster carer expectations during the planning  
17 stage (for example, the need for the permanent carer to be in the foster  
18 carer's house at times, using non-judgemental supportive language with  
19 new carers, and understanding the emotional challenges for the foster  
20 carer of 'letting go').

21 1.7.3 In the planning stage discuss the need for longer-term contact and longer-  
22 term contact arrangements with the current foster carer, for example  
23 contact by letter or email or meeting up once the looked-after child or

- 1 young person has settled in their new placement (for example, after  
2 6 months or a year).
- 3 1.7.4 Encourage and help the permanent carer's extended family to be involved  
4 when a looked-after child or young person moves into their new  
5 placement – for example, by offering a family and friends training day  
6 before the placement.
- 7 1.7.5 Consider support, by trained staff, for birth parents with substance and  
8 alcohol misuse to support reunification. If the support is given, carry it out  
9 alongside court processes, such as family drug and alcohol courts.
- 10 1.7.6 Think about providing relational, emotional, and mental health support for  
11 birth parents and families, alongside court processes, to support  
12 reunification.
- 13 1.7.7 Continue mental health support and support for drug and alcohol  
14 abstinence after reunification.
- 15 1.7.8 Consider [concurrent planning](#) to speed up the transition to permanent  
16 placements. If concurrent planning is used, ensure that carers and birth  
17 parents are well informed about the risk of late changes to the  
18 [permanency](#) plan.
- 19 1.7.9 For guidance on support for drug and alcohol abstinence and behaviour  
20 change follow [NICE's guidance on lifestyle and wellbeing](#).

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on before transition between care placements and to permanent placements](#).

Full details of the evidence and the committee's discussion are in [evidence reviews L: interventions to support looked-after children and young people transitioning out of care to living with adoptive or birth parents or special guardians, or into connected care, and M: barriers to, and facilitators for,](#)

[supporting looked-after children and young people in transition out of care to living with their adoptive or birth parents or special guardians, or into connected care.](#)

1 **During transition**

2 1.7.10 During transition to a new permanent or long-term placement, think about  
3 the need for a more integrated experience for looked-after children  
4 (including children not yet able to talk) and young people that takes into  
5 account previous significant caregiving relationships. This could be  
6 achieved, for example, by creating opportunities for current and new  
7 carers to meet, developing positive carer-to-carer relationships, and  
8 sharing information (such as familiar routines, emotional responses, and  
9 diet) before the placement move.

10 1.7.11 When a looked-after child or young person is moving between care  
11 placements or out of care to permanent placements, ensure that:

- 12 • contact support takes into account the need for continuity with their  
13 existing social network (for example, previous friendships), especially if  
14 the care or educational placement is in a new area, and
- 15 • the transition period allows sufficient time for new social connections to  
16 form and for coming to terms with the loss of previous relationships.

17 1.7.12 To ensure that the permanency process is focused on the looked-after  
18 child or young person, set aside time for 'checking in' with them. Checking  
19 in should consist of careful observation and listening, writing a record of  
20 the conversation, and sharing the perspective of the looked-after child or  
21 young person to feed into shared decision making about transition  
22 arrangements. Think about the need for advocacy services and for the  
23 primary carer to be present during check-ins, particularly for children not  
24 yet able to talk, and children with learning difficulties.

25 1.7.13 During transition to any new placement, social workers should give  
26 prospective carers a personal briefing on a history of the care the looked-  
27 after child or young person has received. The information can be obtained

1 from the statutory health reports, reports from school, and social worker's  
2 assessment.

3 1.7.14 Give all new carers an indexed history of the looked-after child or young  
4 person's care. Create a summary for ease of reading with references to  
5 sections that give more detail. Gain consent for information that involves  
6 third parties and share only what is directly relevant. Include:

- 7 • Risk factors for placement instability and long-term physical and  
8 emotional health such as:
  - 9 – family health history
  - 10 – previous exposures to drug or substance misuse, domestic violence  
11 and abuse, or neglect
  - 12 – other medical history, including antenatal health problems and  
13 exposures (see [recommendation 1.5.4](#))
  - 14 – significant relationships and previous significant conflicts in these  
15 relationships (especially concerning contact)
  - 16 – significant negative events, for example behaviour with potential for  
17 harm to others (with context and timeline of previous events)
  - 18 – previous placement moves and reasons for them.
- 19 • Protective factors to build on, from [life story work](#):
  - 20 – strengths and hopes for the future
  - 21 – significant positive relationships with peers and adults
  - 22 – interests, activities and achievements.

23 1.7.15 Ensure that there is continuity of the care [practitioners](#) who help in the  
24 handover of information for new permanent carers, if possible.

25 1.7.16 Ensure that there is continuity of education (through [virtual schools](#) with  
26 oversight of a virtual school head) when a looked-after child or young  
27 person is placed out of their local authority area. Ensure that the current  
28 school provides a handover of information to the new school as part of the  
29 PEP.

1 1.7.17 Ensure that there is continuity of healthcare for the looked-after child or  
2 young person so that any physical and mental health and wellbeing  
3 support can continue in the new placement. This includes making sure  
4 that any ongoing referrals are transferred to healthcare services in the  
5 new location.

6 1.7.18 When supporting adoptive parents or other permanent carers, recognise  
7 that they may still be learning to parent. Use non-judgemental language  
8 and ensure that they are aware of their rights to receive support.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on during transition between care placements and to permanent placements](#).

Full details of the evidence and the committee's discussion are in [evidence review M: barriers to, and facilitators for, supporting looked-after children and young people in transition out of care to living with their adoptive or birth parents or special guardians, or into connected care](#).

## 9 **After transition**

10 1.7.19 When social workers give information about a looked-after child or young  
11 person's care history to the new carer, they should:

- 12 • involve the looked-after child or young person, if appropriate and the  
13 child or young person is willing, drawing from continuous life story work
- 14 • think about giving the information after enough time has passed for a  
15 relationship of trust to form with the new carer.

16 1.7.20 Ensure that the looked-after child or young person can keep in contact  
17 with their previous carers after the placement move, if the child or young  
18 person wants to and would benefit from it.

19 1.7.21 Agencies should seek feedback from carers and adopters to improve their  
20 transition services, after the permanence order is made.

1 1.7.22 Facilitate peer support for permanent carers – for example, by setting up  
2 and moderating social media networks and fun group outings for face-to-  
3 face peer support.

4 1.7.23 Ask experienced volunteer permanent carers to help permanent carers  
5 with strategies to manage more specialist problems – for example, in  
6 'blocked care' situations (emotional distancing in the adopter–child  
7 relationship), and with looked-after children and young people who have  
8 severe behavioural or mental health problems, or special educational  
9 needs.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on after transition between care placements and to permanent placements](#).

Full details of the evidence and the committee's discussion are in [evidence review M: barriers to, and facilitators for, supporting looked-after children and young people in transition out of care to living with their adoptive or birth parents or special guardians, or into connected care](#).

## 10 1.8 Transition out of care to independence

### 11 Needs assessment for transition out of care

12 1.8.1 [Personal advisers](#), working with social workers, should assess the needs  
13 of looked-after young people when transitioning out of care to  
14 independence. Take into account:

- 15 • previous [life story work](#)
- 16 • problem-solving skills and practical skills
- 17 • mental health support and long-term health needs
- 18 • education, training and employment
- 19 • financial resources
- 20 • gaps in their social network (connectedness, isolation and negative
- 21 relationships).

1 1.8.2 Based on the needs assessment, consider providing the following support  
2 for care leavers:

- 3 • Access to health services, including registering with a GP, dentist,  
4 optician and therapists (for those with complex healthcare needs), and  
5 extending access to CAMHS (to support continuity of care) or  
6 alternative emotional and wellbeing services such as online support,  
7 face-to-face counselling or group work. Continue services until care can  
8 be transferred to adult services.
- 9 • Support for gaps in social network.
- 10 • Life skills training.
- 11 • Job preparation services, job searching, and career advice.
- 12 • Flexible funding to support career development, for example for  
13 specialist equipment.
- 14 • Suitable and ongoing accommodation (through the leaving care team  
15 working together with other housing services), for example, supported  
16 housing.

17 1.8.3 Provide the following services to give care leavers a safety net:

- 18 • drop-in services
- 19 • more frequent meetings with their personal adviser, if the care leaver  
20 wants them
- 21 • facilitated peer support groups.

## 22 **Plans and support for care leavers**

23 1.8.4 Tell care leavers and their primary [carers](#) of the rights of care leavers to  
24 statutory support (related to care-leaver status such as child in care and  
25 relevant child support) and extended support from age 18 to 25 (including  
26 reopening pathway planning and contact with the local authority).

27 1.8.5 Explain to care leavers and their primary carers how the pathway plan  
28 works, and the care leaver's rights associated with pathway planning. For  
29 example, that they can request a pathway plan review.

- 1 1.8.6 Tell care leavers and their primary carers of the rights of care leavers to  
2 advocacy services that can help ensure they receive the statutory  
3 provision they are entitled to.
- 4 1.8.7 When developing pathway plans for care leavers, include clear  
5 timeframes for actions, and who is responsible for completing the action.
- 6 1.8.8 Quality assure and review pathway plans for care leavers to ensure that  
7 improvements in outcomes are achieved.
- 8 1.8.9 Personal advisers should tell care leavers about services available in their  
9 area to support independence. These could include work experience  
10 opportunities, apprenticeships, and college support.
- 11 1.8.10 For further guidance on transition from child to adult services, follow  
12 [NICE's guideline on transition from children's to adults' services for young](#)  
13 [people using health or social care services.](#)

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on transition out of care to independence](#).

Full details of the evidence and the committee's discussion are in [evidence reviews N: interventions and approaches to support looked-after young people transitioning out of care into independent living, and O: barriers to, and facilitators for, supporting and developing looked-after young people to transition out of care into independent living](#).

#### 14 **Support for care leavers in further and higher education**

- 15 1.8.11 Consider the need for extended care beyond age 18 for care leavers:
- 16
- 17 • in higher and further education
  - with special educational needs and disabilities.

1 1.8.12 [Virtual school](#) heads should take into account educational opportunities  
2 for care leavers beyond traditional further or higher education when  
3 deciding whether to extend support.

4 1.8.13 For care leavers at college or university, ensure that there is continuity of  
5 housing during holidays, with meaningful social support. This support  
6 could include 'buddying' systems for peer support, mentoring from older  
7 student volunteers on campus, and other social opportunities for care  
8 leavers to tackle isolation during the holidays.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on support for care leavers in further and higher education](#).

Full details of the evidence and the committee's discussion are in [evidence reviews N: interventions and approaches to support looked-after young people transitioning out of care into independent living, and O: barriers to, and facilitators for, supporting and developing looked-after young people to transition out of care into independent living](#).

## 9 **Extended care**

10 1.8.14 Encourage and support young people leaving care to stay in their current  
11 care placement until at least age 18. Explore the possibility of [staying put](#)  
12 with carers beyond age 18.

13 1.8.15 Take into account the increased risk to young people (age 16 to 17)  
14 posed by breakdowns in placement that lead to moves into inappropriate  
15 housing. Wherever possible avoid using unregulated housing for care  
16 leavers, particularly for those at higher risk of exploitation or risk-taking  
17 behaviour.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on extended care](#).

Full details of the evidence and the committee's discussion are in [evidence reviews N: interventions and approaches to support looked-after young people transitioning out of care into independent living, and O: barriers to, and facilitators for, supporting and developing looked-after young people to transition out of care into independent living](#).

## 1 **Feedback to improve services**

- 2 1.8.16 Encourage care leavers to give feedback about their care placement. This  
3 could be done, for example, through children in care councils. Use this  
4 also to improve services for people moving into independence.

For a short explanation of why the committee made this recommendation and how it might affect practice, see the [rationale and impact section on feedback to improve services](#).

Full details of the evidence and the committee's discussion are in [evidence reviews N: interventions and approaches to support looked-after young people transitioning out of care into independent living, and O: barriers to, and facilitators for, supporting and developing looked-after young people to transition out of care into independent living](#).

## 5 **1.9 Forum for strategic leadership and best practice**

- 6 1.9.1 Make use of forums to help communication and bring together expertise  
7 and leadership from all agencies providing care for looked-after children  
8 and young people, as well as representatives of looked-after children and  
9 young people and their [carers](#), and care leavers.
- 10 1.9.2 Use forums for looked-after children and young people to highlight  
11 examples of exemplary practice, review recent research, align and  
12 improve tools used for health and risk assessments, educate [practitioners](#),  
13 standardise language (for example, job titles and the names of risk  
14 assessment tools and procedures), and agree a shared approach to  
15 practice.

For a short explanation of why the committee made these recommendations and how they might affect practice, see the [rationale and impact section on forum for strategic leadership and best practice](#).

Full details of the evidence and the committee's discussion are in [evidence review E: interventions and approaches to support practitioners in completing physical and mental health and wellbeing assessments \(and act on findings during the care journey\) for looked-after children and young people](#).

## 1 **Terms used in this guideline**

2 This section defines terms that have been used in a particular way for this guideline.  
3 For other definitions see the [NICE glossary](#) and the [Think Local, Act Personal Care  
4 and Support Jargon Buster](#).

## 5 **Ages and Stages Questionnaire**

6 The Ages and Stages Questionnaires provides developmental and social–emotional  
7 screening for children between birth and age 6. It draws on parents' knowledge, and  
8 is widely used in practice to pinpoint developmental progress and catch  
9 developmental delays in young children.

## 10 **Attachment**

11 A deep and long-lasting emotional bond between 2 people. For example, it includes  
12 the child seeking to be close to their caregiver when they feel upset or threatened,  
13 with the caregiver responding sensitively and appropriately to their needs.  
14 Attachment disorder is a recognised mental disorder that affects a very small  
15 minority of children experiencing attachment problems. Insecure attachment patterns  
16 and disorganised attachment are more common and are indicators of possible  
17 dysfunction in a child's attachment system that can lead to poor outcomes.

## 18 **Carer**

19 The primary carer of the looked-after child or young person – that is, the adult who  
20 has primary responsibility for the day-to-day care of the looked-after person.

1 **Care network**

2 The carers and professionals who support the looked-after child or young person,  
3 including, for example, foster carers, social workers, healthcare professionals and  
4 educational professionals.

5 **Concurrent planning**

6 Usually for babies and young children who are likely to need adoption but who have  
7 a chance of being reunited with their birth family. In concurrent planning, concurrent  
8 carers are approved as both foster and adoptive parents. They act as foster carers  
9 while the courts decide whether or not a child can return to its birth family. During  
10 this time the children see their parents regularly in supervised contact centres and  
11 the concurrent carers support the birth family's efforts to regain the care for their  
12 child.

13 **Connected carers**

14 Relatives, friends or other people who have a pre-existing relationship with the  
15 looked-after child or young person. If a child or young person cannot live with their  
16 parents, connected carers can become their approved foster carers. The child  
17 formally remains a looked-after person.

18 **Contact supervisors**

19 The role of a contact supervisor is to unobtrusively observe contact between looked-  
20 after children and young people and their parents or other family members during  
21 their arranged visits, to ensure that all contact is safe and positive.

22 **Contextual safeguarding**

23 Seeks to recognise the risks to the child or young person that occur outside the  
24 home and respond to these to keep them safe. The risks can include violence and  
25 abuse from, for example, the person's neighbourhood or school, or social media.

26 **Foster carers**

27 Foster carers work alongside a team of professionals to provide looked-after children  
28 and young people with full-time care in the foster carer's home. Foster care may be a  
29 temporary arrangement, with children and young people moving on to a permanent

1 placement or returning to their own birth families. Children and young people may  
2 also live in long-term foster care placements if a return home is not possible.

### 3 **Health plan**

4 Part of each looked-after child's care plan. It is made before the first looked-after  
5 review and incorporated into the child's placement plan or placement information  
6 record. This plan is reviewed after each subsequent health assessment and at the  
7 child's looked-after review, or as circumstances change, to ensure health actions  
8 have been completed.

### 9 **Initial health assessment**

10 A statutory health assessment for looked-after children and young people that must  
11 be completed within 28 days of coming into care. It must be completed by a  
12 registered medical practitioner.

### 13 **Life story work**

14 A social work intervention that aims to help children and young people in care begin  
15 to understand and accept their personal history and future. Life story books are often  
16 used to give a visual aid and reminder of important events or feelings.

### 17 **Multidimensional treatment foster care**

18 A solo foster placement with a specially trained foster family for between 9 and  
19 12 months. It includes intensive support from a multidisciplinary team, with 24-hour  
20 support from the programme supervisor. The intention is to change behaviour  
21 through promoting positive role models. During the placement, the young person's  
22 behaviour is closely monitored and good behaviour is rewarded. Family therapy is  
23 provided for birth parents, and they are taught the same strategies in preparation for  
24 reuniting them with their child. Also known as intensive fostering.

### 25 **Paired reading**

26 In paired reading looked-after children read alongside a partner, such as their  
27 primary carer. This helps the child practice their spelling, comprehension, and  
28 pronunciation. Attentive and responsive feedback by the carer throughout helps the  
29 child to achieve reading fluency.

1 **Personal adviser**

2 Local authorities provide personal advisers to care leavers up until they reach the  
3 age of 25. The personal adviser ensures a care leaver is given the correct level of  
4 support to achieve independence. They should have a practical knowledge of the  
5 issues facing care leavers as they make their transition into adulthood, and the legal  
6 requirements for support.

7 **Permanency**

8 The conditions that lead to a child or young person experiencing security and  
9 continuity in their relationships, particularly those of belonging to a committed family.  
10 In a permanency plan, a looked-after child or young person is assessed and  
11 prepared for long-term care that meets their needs, and takes into account their  
12 wishes and feelings. In a permanence order, it has been agreed that a child or young  
13 person will not return home to their birth family, and parental rights and  
14 responsibilities are transferred to another carer, for example, an adoptive parent.

15 **Practitioner**

16 A paid professional providing direct care for looked-after children and young people.  
17 Practitioners may include social workers, independent review officers, educational  
18 professionals, healthcare professionals and therapists.

19 **Prosocial**

20 Prosocial behaviour is social behaviour that benefits other people, characterised by  
21 actions that show concern for the feelings and welfare of other people. For example,  
22 helping, cooperating, and sharing.

23 **Safer caring plan**

24 Enables foster carers to consider potentially abusive or risky situations that may  
25 arise in the foster home and create a plan to minimise risks.

26 **Special guardians**

27 People or a person appointed by a special guardianship order for children and young  
28 people who would benefit from a legally secure placement but cannot live with their  
29 birth parents. A birth parent cannot apply to discharge the order unless they have the

1 permission of the court to do so, but the order does not end the legal relationship  
2 between the child and the birth parents (as in adoption).

### 3 **Staying put**

4 When a foster placement becomes a 'staying put' arrangement, the young person  
5 staying put is no longer a looked-after child but is a care leaver. They are therefore  
6 entitled to support (for example, a personal adviser) as a care leaver but will remain  
7 in the foster home. However, the former foster carer is no longer officially a foster  
8 carer for that young adult.

### 9 **Support network**

10 This covers carers, professionals, friends, birth family, and any other supportive  
11 adults who provide formal or informal support to the looked-after child or young  
12 person.

### 13 **Virtual school**

14 The virtual school champions progress and educational attainment of looked-after  
15 children and young people in the local authority. The virtual school is not 'attended'  
16 but provides coordination of educational services for looked-after children and young  
17 people at a strategic and operational level. Looked-after children and young people  
18 within the local authority remain the responsibility of the school at which they are  
19 enrolled.

## 20 **Recommendations for research**

21 The guideline committee has made the following recommendations for research.

### 22 **Key recommendations for research**

#### 23 **1 Interventions to support placement stability in residential care**

24 What interventions are effective in promoting placement stability among looked-after  
25 children and young people in residential care?

For a short explanation of why the committee made this recommendation see the [rationale section on supporting positive relationships](#).

Full details of the evidence and the committee's discussion are in [evidence review A: interventions to support care placement stability for looked-after children and young people](#).

1 **2 Interventions to support stability of permanent placements**

- 2 What interventions are effective in supporting the stability of placements in looked-  
3 after children and young people moving out of care to permanency (incorporating the  
4 perspectives of looked-after children and permanency carers)?

For a short explanation of why the committee made this recommendation see the [rationale section on after transition between care placements and to permanent placements](#).

Full details of the evidence and the committee's discussion are in [evidence review L: interventions to support looked-after children and young people transitioning out of care to living with adoptive or birth parents or special guardians, or into connected care](#).

5 **3 Supporting mental health of unaccompanied asylum seekers**

- 6 What interventions are effective in supporting the mental health of unaccompanied  
7 asylum seekers?

For a short explanation of why the committee made this recommendation see the [rationale section on mental health and CAMHS](#).

Full details of the evidence and the committee's discussion are in [evidence review F: interventions to promote physical, mental, and emotional health and wellbeing of looked-after children, young people and care leavers](#).

8 **4 Using and safeguarding social media in contact with birth parents**

- 9 How does social media contribute to contact arrangements in looked-after children  
10 and young people, and how can this be safeguarded?

For a short explanation of why the committee made this recommendation see the [rationale section on supporting positive relationships](#).

Full details of the evidence and the committee's discussion are in [evidence review D: barriers and facilitators for supporting positive relationships among looked-after children and young people](#).

## 1 **5 Mental health support for reunification with birth parents**

- 2 What is the effectiveness of mental health support for promoting reunification with
- 3 birth parents?

For a short explanation of why the committee made this recommendation see the [rationale section on transition between care placements and to permanent placements](#).

Full details of the evidence and the committee's discussion are in [evidence review L: interventions to support looked-after children and young people transitioning out of care to living with adoptive or birth parents or special guardians, or into connected care](#).

## 4 **Other recommendations for research**

### 5 **Continuing support for the physical and mental health needs of care leavers**

- 6
- 7 What interventions are effective in promoting and continuing to support physical and
- 8 mental health and wellbeing in care leavers?

For a short explanation of why the committee made this recommendation see the [rationale section on transition out of care to independence](#).

Full details of the evidence and the committee's discussion are in [evidence review N: interventions and approaches to support looked-after young people transitioning out of care into independent living](#).

1 **Promoting physical exercise, and a healthy diet and lifestyle**

2 What interventions are effective in promoting physical exercise and a healthy diet  
3 and lifestyle in looked-after children, young people and care leavers?

For a short explanation of why the committee made this recommendation see the [rationale section on physical touch, relationships, and wellbeing activities](#).

Full details of the evidence and the committee's discussion are in [evidence review F: interventions to promote physical, mental, and emotional health and wellbeing of looked-after children, young people and care leavers](#).

4 **Therapeutic interventions for promoting school stability and learning**

5 What therapeutic interventions are effective and cost-effective in improving learning  
6 outcomes, school attendance and reducing exclusion in educational settings for  
7 looked-after children?

For a short explanation of why the committee made this recommendation see the [rationale section on improving educational outcomes](#).

Full details of the evidence and the committee's discussion are in [evidence review I: interventions to support learning needs for school-aged looked-after children and young people](#).

8 **Rationale and impact**

9 These sections briefly explain why the committee made the recommendations and  
10 how they might affect practice.

11 **Diversity**

12 [Recommendation 1.1.1](#)

13 **Why the committee made the recommendation**

14 The committee noted that children and young people with certain protected  
15 characteristics may be over-represented among looked-after children and young  
16 people, for example, through race or sexuality. They also understood that looked-

1 after children and young people themselves constitute a vulnerable group and  
2 therefore certain subgroups of looked-after children may be disadvantaged in  
3 multiple ways. Based on their own knowledge and experience the committee  
4 recognised that ensuring these groups are not marginalised, and that their needs are  
5 met, may need additional attention and expertise.

## 6 **How the recommendation might affect practice**

7 This recommendation is not expected to need significant additional resources. It is  
8 the statutory duty of local authorities to ensure that children and young people in  
9 their care are not disadvantaged or marginalised as a result of their protected  
10 characteristics.

11 [Return to recommendations](#)

## 12 **Supporting positive relationships**

13 [Recommendations 1.2.1 to 1.2.21](#)

## 14 **Why the committee made the recommendations**

### 15 **Defining positive relationships**

16 The committee discussed that supporting positive relationships is often spoken about  
17 as an aim of care, but it may be poorly defined in practice. A large amount of  
18 evidence from the UK based on interviews and focus groups (qualitative evidence)  
19 considered the factors that help to build these relationships. In many cases, the  
20 committee observed that looked-after children and young people were not asking for  
21 more specific interventions or programmes. On the contrary, they often perceived an  
22 excess of practitioners involved with their daily lives. Rather, they wanted genuine  
23 caring relationships that reflected core principles.

### 24 **Sibling relationships**

25 The committee looked at robust study designs (randomised controlled trials) on  
26 interventions aimed at enhancing the relationship between siblings in care. The  
27 evidence from these showed that the interventions improved the quality of sibling  
28 interaction and reduced aggressive behaviour.

1 The committee considered the main features of the interventions described in these  
2 US-based studies. Carer members of the committee agreed that these activities  
3 could have been useful in their own home situations, not just with biological siblings  
4 but also non-biological siblings they were living with (biological or adopted children of  
5 the carer). However, they noted that harm could result if safeguarding considerations  
6 were not taken into account because facilitated sibling relationships may not always  
7 be beneficial. Therefore, these interventions were not to be recommended in every  
8 case.

9 The committee noted that the specific evidence-based programmes were drawn from  
10 studies in other countries with very different social care contexts. Using the evidence  
11 and their own experience they recommended the features that could be implemented  
12 with success in the UK setting. The committee noted that 1 study showed  
13 adolescents may benefit from individualised coaching, with time separate from the  
14 primary carer to build the sibling relationship, whereas the committee considered  
15 primary-school aged children would benefit from having the primary carer present.  
16 For primary school children, this can help to create a non-threatening environment  
17 and improve relationships between the siblings and the carer. It can also teach the  
18 carer new methods for mediating sibling relationships.

19 The committee emphasised that training to promote positive sibling relationships  
20 should start at the time of placement. However, based on their own experience, the  
21 committee agreed that the relationship between siblings needs to be stable before  
22 any activity-based interventions could be attempted. This could be achieved by  
23 support targeted at helping carers understand and maintain stable sibling  
24 relationships. For example, in the home setting with a professional who is trained in  
25 mediating strategies.

## 26 **Relationships with the birth family**

27 The committee reflected on evidence based on interviews and focus groups  
28 concerning contact with the birth family and the role of contact supervisors when  
29 observed contact is necessary for safeguarding. They also discussed that using  
30 contact supervisors can be helpful if the birth family is receptive to support and  
31 feedback to improve the quality of contact.

## DRAFT FOR CONSULTATION

1 Evidence based on interviews and focus groups in the UK showed that it is important  
2 to not overwhelm looked-after children and young people with too many  
3 practitioners, and to promote continuity of relationships with practitioners. The  
4 committee agreed that retaining the same contact supervisors for a looked-after child  
5 or young person if possible would help to provide this continuity.

6 The committee discussed the fact that contact supervisors share intimate  
7 experiences and vulnerable moments with the looked-after child or young person  
8 and their birth family. Based on their own experience, the committee considered that  
9 if the role of the contact supervisor was more developed there would be the potential  
10 to better support birth family relationships, greater feedback of information to the  
11 care team, and better safeguarding. The committee therefore agreed that more  
12 training was needed for contact supervisors to improve the contact experience.

13 Evidence based on interviews and focus groups showed that contact may need a  
14 high level of support at the start of placements. However, this could, in some cases,  
15 be hindered by high levels of monitoring, and decreasing levels of support may be  
16 needed as time progresses. Therefore, the committee considered that a more  
17 cautious approach to contact may be needed in the early stages of care placements,  
18 adjusting supervision intensity according to needs over time.

19 Based on expert testimony, the committee were mindful of unaccompanied asylum  
20 seekers and those of non-British nationality, so they also stressed that non-English  
21 contact supervision needs a translator present to make good safeguarding and  
22 support possible.

23 The committee discussed interview and focus group-based evidence on social-  
24 media-based contact. They recognised that such resources could help ongoing  
25 relationships much more easily than traditional methods, because social media is  
26 easily accessible for young people and needs little organisation, but that unobserved  
27 contact online could pose serious dangers by bypassing safeguarding measures.  
28 The committee therefore agreed that safeguarding considerations need to always  
29 take into account the possibility of online contact. For example, if social media  
30 contact was permitted in cases with moderate safeguarding considerations, it is

1 important for the content of interactions to be monitored and the amount of time  
2 spent communicating managed.

3 Large amounts of UK-based interview and focus group evidence considered positive  
4 relationships and contact arrangements and how this might be supported. However,  
5 no themes considered how social media influences contact arrangements or how  
6 this might be facilitated by carers and risks be managed. The committee agreed that  
7 research is needed to determine the effectiveness of support mechanisms and  
8 interventions to manage the use of social media in care placements, particularly  
9 among those at risk of exploitation (see [research recommendation 4](#)).

### 10 **Relationships with social workers**

11 Based on UK-based interview and focus group evidence and committee experience,  
12 the committee recognised the importance to looked-after people of their relationship  
13 with their social worker. The committee agreed that training and support for social  
14 workers should include communication skills. This would improve transparency of  
15 care and help maintain positive relationships. It would also mean that any  
16 information given to the child would be done in a way that they can understand and  
17 accept, particularly when a carer transition is approaching.

18 Based on committee experience and knowledge, and some interview and focus  
19 group-based evidence, the committee recognised the need for more support for  
20 social workers to prevent burnout, which can lead to greater turnover in staff and  
21 loss of continuity for looked-after people. The committee considered factors that  
22 could help prevent burnout at work, as well as improving amount of time available for  
23 direct care. These included supervision with regular check-ins and a focus on  
24 reflective practice; consultation for complex and specialist problems; and trauma-  
25 informed training to promote positive relationships, as well as more practical support  
26 to increase the time available for direct one-to-one work.

27 The committee noted that when social workers are trauma informed, they can make  
28 sense and meaning of how the child is behaving in relationships, in context of their  
29 experiences. As the lead professional they can influence how the network views the  
30 child, what language is used and how it will be most helpful to support them in more

1 helpful positive relationships. This is the ripple effect of different levels of trauma  
2 training for the network.

3 Social workers on the committee commented on the increase in workload, lack of  
4 funding, and an upwards trend in the number of looked-after children and young  
5 people. Much work is needed to complete performance indicators and other  
6 administrative tasks and this is often prioritised over one-to-one work with young  
7 people. Some interview and focus group-based evidence suggested that one-to-one  
8 time could be improved by increasing the administrative support for social workers  
9 within local authorities. While recognising that services are often overwhelmed and  
10 that resources are limited, the committee agreed that a culture change was also  
11 needed that prioritised more time for direct care between social workers and looked-  
12 after children and young people. The committee agreed that if managers use and  
13 review systems to free up more time for direct care this could both increase  
14 professional retention, and enable more one-to-one time between social workers and  
15 looked-after children and young people.

16 UK intervention and focus group evidence on the impact of professional moves  
17 (particularly those of the child's allocated social worker) on looked-after people  
18 supported the committee's own experience that local authorities do not have good  
19 systems for monitoring the level of social worker turnover. They agreed that if local  
20 authorities could collect and review data on turnover among their frontline staff and  
21 reflect on its impact on looked-after children and young people, this would help local  
22 authorities assess the success of staff support systems. They could then develop  
23 action plans to keep turnover as low as possible.

24 There was substantial UK-based interview and focus group evidence that looked-  
25 after children and young people reacted strongly against the changing of social  
26 workers they had built a positive relationship with. The committee discussed the  
27 complexity of addressing this issue. Turnover of social workers was frequently as a  
28 result of workload, burnout, or the need to change work for career progression.  
29 Drawing from this evidence and their own experience, the committee noted that  
30 these reasons were often not well communicated to looked-after people, and social  
31 workers were perceived to simply disappear. The committee agreed this could be  
32 ameliorated by informing looked-after people pre-emptively and transparently about

1 changes of social workers, taking care to recognise the emotional impact of such  
2 changes and providing an opportunity to say goodbye.

3 The committee, based on their knowledge and experience, also discussed the  
4 problem of the departing social worker and primary carers not giving a consistent  
5 message about the reason for leaving. The committee agreed that this problem  
6 could be reduced by informing primary carers in advance about the reasons for  
7 professional transitions, particularly if strong relationships had formed.

### 8 **Mentoring**

9 The committee recognised the potential benefit, both for positive relationships and  
10 health and wellbeing, of having a mentor for friendship and guidance, particularly  
11 one with care experience. Evidence from robust study designs suggested that older  
12 children may be more responsive to coaching and mentoring, particularly those with  
13 pre-existing emotional and mental health problems. The committee also noted that  
14 professional oversight of safeguarding was important to prevent inappropriate or  
15 negative relationships forming, and that a significant mentor–mentee age gap would  
16 be advisable.

### 17 **Friendship**

18 Based on UK-based interview and focus group studies, and their own experience  
19 and knowledge, the committee considered the importance of friendship groups to  
20 looked-after children and young people. They recognised that looked-after children  
21 and young people may rely on these friendships to play a greater supportive role  
22 because of the lack of close relationships of other kinds (for example, with the birth  
23 family). As a result, the committee were concerned that contact with friendships,  
24 particularly those from before coming into care, or other placements in care, should  
25 be supported if possible.

### 26 **Placement stability**

27 Many studies, using data from UK-based interviews and focus groups, reported that  
28 looked-after children and young people particularly valued care that was available,  
29 accessible and reliable. They benefitted from knowing that support was available  
30 even out-of-hours for urgent problems. Committee experience also suggested that  
31 looked-after children and young people felt the disparity if an out-of-hours call

1 service was available for carers when one was not provided for them. This could  
2 lead to a sense of power imbalance and insecurity.

3 The committee agreed that out-of-hours support should be available for looked-after  
4 children and young people. However, they recognised that employing an on-call  
5 social worker may need substantial changes to contracts or expense to already  
6 stretched social care budgets. So they agreed that other options might be used to fill  
7 this gap.

8 There was strong UK-based interview and focus group evidence on the importance  
9 of shared decision making, including all agendas being laid out transparently to help  
10 the looked-after child or young person make their own decisions. For example, the  
11 committee discussed occasions when an option for a new placement was 'dressed  
12 up' as great opportunity, when in reality the young person was being nudged into the  
13 placement because of financial pressures for the local authority, or because the  
14 foster carer had decided to end the current placement. The committee agreed that it  
15 is better to discuss reasons for placement breakdown openly, giving emotional  
16 support built into ongoing life story work and using accessible and age-appropriate  
17 communication.

18 The committee noted that there was little evidence for interventions to support  
19 placement stability in residential care. They therefore made a recommendation for  
20 more research (see [research recommendation 1](#)).

### 21 **Serious behavioural problems**

22 Evidence based on robust studies of multidimensional treatment foster care in  
23 adolescents largely covered youth offenders referred from the criminal justice  
24 system, or populations with significant pre-existing behavioural and conduct  
25 disorders. The committee were impressed by the evidence of effectiveness,  
26 particularly evidence showing reduced involvement with the criminal system and  
27 reduced rates of violent crime and imprisonment across these populations. So they  
28 agreed this intervention would be suitable for looked-after young people with  
29 behavioural issues that are significant and persistent enough to merit regular  
30 involvement of the criminal system.

## 1 **Disorganised attachment**

2 The committee considered evidence based on robust studies looking at interventions  
3 to support development and school-readiness in preschool children. Particularly,  
4 evidence on the Attachment and Biobehavioural Catch-up intervention for babies  
5 and toddlers, which resulted in improvements in language, attention problems and  
6 cognition. The committee looked at the similarity of this intervention to interventions  
7 recommended in the [NICE guideline on children's attachment](#). They discussed the  
8 overlap between the population in the children's attachment guideline and this  
9 guideline. The committee agreed that all looked-after children and young people  
10 were at risk of attachment difficulties, and therefore that the evidence base for and  
11 recommendations in the children's attachment guideline were also relevant to  
12 looked-after children and young people.

## 13 **How the recommendations might affect practice**

14 Trauma-informed training may have a limited resource impact because it could be  
15 incorporated in existing training for social workers. The committee recognised that  
16 existing training has limited capacity for additional material, but they agreed that  
17 trauma-informed training was a priority for inclusion. There are freely available  
18 resources for trauma-informed training and, although there would be a cost  
19 associated with adapting these resources for purpose, these costs are expected to  
20 be minimal.

21 Supervision with regular check-ins to support the social worker is likely to need more  
22 personnel time from the social workers and their supervisors. It may also need a  
23 culture change that focuses on reflective practice and increasing the amount of direct  
24 one-to-one time social workers get with looked-after people. Improving systems to  
25 increase professional retention, enable more one-to-one time between social  
26 workers and looked-after people, and reduce duplication of effort, could be less  
27 costly than purchasing additional social worker time.

28 Collection and review of data on staff turnover, and development of action plans to  
29 address issues where there are high levels of turnover is likely to be associated with  
30 administrative costs in collating data that is already collected. However, lower levels  
31 of staff turnover would allow for better continuity of care and minimise the negative

1 impact of personnel changes on looked-after children and young people, the benefits  
2 of which are considered to outweigh the small costs associated with this  
3 recommendation.

4 Providing consultation for complex and specialist problems is likely to need  
5 additional personnel time and resources to implement. The committee noted that  
6 expertise for this can often be found 'in-house' rather than needing to fund a new role  
7 or external training agency, but in some cases an initial investment may be needed  
8 to build up expertise within the local authority. Where consultation can be from more  
9 advanced social workers or from multiagency professionals in the network, this  
10 should not incur significant cost. Consultation provided by specialist agencies and  
11 professions may need to be bought in, for example experts on sexually harmful  
12 behaviour.

13 There are currently limited services specifically aimed at siblings, although there is  
14 generally funding already available for shared activities and days out for siblings  
15 from local authority leisure budgets. Interventions to promote sibling relationships are  
16 potentially costly, but if they could be delivered by trained youth workers rather than  
17 graduate-level practitioners, or if existing roles could be adapted to deliver these  
18 interventions, this could help contain costs.

19 Mentoring interventions by peers with experience of the care process would often be  
20 carried out on a voluntary basis or through informal peer-to-peer interactions and  
21 would not need an increase in resources. Some additional costs may be incurred in  
22 providing professional oversight to mentoring programmes, which would need  
23 organisation and the processing of, for example, DBS (Disclosure and Barring  
24 Service) checks.

25 Contact supervisors are already a part of the care team, and any additional training  
26 needed could be incorporated into existing training, so the recommendation is  
27 expected to have a small impact on resource use. Similarly, translation services are  
28 already available in NHS settings when needed so these should not be a substantial  
29 extra cost. A child's right of expression is mandated by statutory guidance so  
30 expenditures on translation services are justified.

1 Facilitating online contact, and the additional safeguarding considerations, is not  
2 expected to have an impact on current resource use, because these contacts are  
3 likely to replace other forms of contact that would need similar management.

4 Multidimensional treatment foster care is a resource-intensive intervention and will  
5 be associated with high implementation and running costs. But when used in  
6 adolescents with a history of persistent offending behaviour, these upfront costs are  
7 likely to be offset by the lower recurring monthly costs and additional health and  
8 social benefits from the intervention compared with usual residential care. A costing  
9 analysis comparing these costs of multidimensional treatment foster care with  
10 residential care is detailed in evidence review F. Additionally, improving the  
11 outcomes for adolescents who are offenders will reduce the burden on social care  
12 and judicial sectors.

13 [Return to recommendations](#)

## 14 **Supporting and involving carers**

15 [Recommendations 1.3.1 to 1.3.9](#)

### 16 **Why the committee made the recommendations**

17 The committee discussed UK-based interview and focus group evidence that carers  
18 often feel their input is not valued. They agreed that carers have the most intimate  
19 knowledge of the looked-after child or young person, so their perspective and the  
20 information they provide are important alongside professional input for decision  
21 making by the broader care team.

22 Studies showed that carers could feel 'left alone' to deal with quite severe problems  
23 on evenings or weekends, and lack of out-of-hours support can make them feel  
24 isolated. The committee agreed that out-of-hours support services are important, but  
25 recognised that employing an on-call social worker may need substantial changes to  
26 contracts and expenses. So they agreed that various alternatives might be used to  
27 fill this gap. For completeness of records and continuation of professional oversight,  
28 the committee also agreed that carers should log any help sought outside usual  
29 operational hours.

## DRAFT FOR CONSULTATION

1 Many UK-based interview and focus group studies looked at the value of peer  
2 support, and the committee also heard from experts that peer support could help fill  
3 the gaps in support left by overburdened social care systems and social workers.  
4 Carers may offer support to each other that is more accessible and available than  
5 from practitioners, and such support only needs to be facilitated and moderated to  
6 prevent the passage of misinformation. Creating online spaces for this could be both  
7 cheaper and more accessible than hosting in-person groups.

8 The committee discussed UK-based interview and focus group evidence showing  
9 that respite care was valued. They agreed that it was of vital importance to offer  
10 carers rest, to prevent burnout and subsequent placement breakdown. They noted  
11 that some carers may feel that their caregiving duties prevent them from going on  
12 holiday or travelling.

13 The committee discussed that it is helpful if care is provided by a person the child or  
14 young person knows, to prevent the feeling that they are being 'sent away'. This also  
15 builds up a network of supportive adults for the child and childcare options for carers.

16 Based on their own knowledge and experience, and some UK-based interview and  
17 focus group data, the committee discussed that planned and proactive offers of  
18 respite are more effective than respite offered reactively in response to crisis, when it  
19 may already be too late to prevent placement breakdown. They also discussed the  
20 importance of the person who is providing respite care having the skills needed to  
21 support the individual needs of the looked-after child or young person.

22 The committee looked at UK-based interview and focus group evidence on resource  
23 constraints, stretched services, information gaps between carers and practitioners,  
24 and reactive care (responding to problems as they arise, rather than anticipating).  
25 They found that carers were often unaware of the services available for support from  
26 their local authority, and therefore felt as though certain services had been kept  
27 hidden to save costs. The committee agreed that carers need to be fully informed  
28 about the support available before the placement starts. This enables carers to  
29 negotiate the support they need, and empowers them to act on a more equal footing  
30 with practitioners.

1 The committee saw UK-based interview and focus group evidence showing that  
2 carers (particularly shorter-term foster carers) are often unaware of ongoing  
3 interventions for a child placed with them, such as life story or relationship work.  
4 They agreed that informing carers about the contents and aims of interventions to  
5 support placement stability was in the best interests of the child, and would improve  
6 continuity of care with marginal costs.

7 The committee recognised that there was an additional set of recommendations for  
8 carers in the NICE guideline on supporting adult carers, and that these  
9 recommendations may be relevant for some carers of older looked-after children.

## 10 **How the recommendations might affect practice**

11 Using alternatives to on-call social workers will mitigate the cost of increasing out-of-  
12 hours support. A range of possible ways in which out-of-hours support could be  
13 offered was included in the recommendation to allow local authorities to use a  
14 system that works best for them - both logistically and financially. Some of the  
15 options listed would be more affordable - such as the use of volunteer-operated  
16 helplines or peer support or advocacy groups. Local foster carer associations may  
17 have people working on-call, or provide round the clock access to a peer support  
18 network.

19 However, the committee recognised that the availability of alternative options may  
20 vary between local authorities. To provide out-of-hours services with social workers  
21 'on call' would need a contract change for social workers, but they agreed this could  
22 be done by reallocating existing social worker time from day work to out-of-hours  
23 work. This contract change and reallocation would have cost implications, but the  
24 committee agreed that having social worker availability for out-of-hours emergencies  
25 and urgent problems, could allow for problems to be addressed more quickly. This  
26 would help to avoid more significant costs and adverse consequences (for example,  
27 placement breakdown, self-harm, hospital visits and police being called).

28 Facilitating accessible peer support for carers is unlikely to have a substantial impact  
29 on resources, because most would be peer led and not need much additional  
30 personnel time or physical resources from the local authority. Message boards may  
31 need to be moderated to prevent misinformation, but this could save time and

1 resources by helping to resolve issues that would otherwise need the attention of  
2 care staff.

3 Respite care (or 'support care') for carers to prevent placement breakdown is already  
4 broadly available in the care system. Costs vary depending on individual needs and  
5 local funding streams. The committee recommended the approach to respite care  
6 that should be taken if respite care is needed, rather than necessarily recommending  
7 additional respite care beyond what is already provided.

8 [Return to recommendations](#)

## 9 **Training for carers**

10 [Recommendations 1.3.10 to 1.3.19](#)

### 11 **Why the committee made the recommendations**

12 Based on their experience and knowledge the committee recognised that, in  
13 practice, training - such as behaviour management training - is often delivered  
14 reactively, in response to difficulties that a carer is currently experiencing. This  
15 threatens placement stability because the carer may feel underprepared and under-  
16 supported to continue the placement. The committee advocated a greater emphasis  
17 on forward planning support for carers (before placement) based on the recognised  
18 and documented needs of the individual child, and involving other agencies as  
19 needed.

20 The committee discussed evidence, from robustly designed studies, on the  
21 effectiveness of parent-training interventions (some of which also included child-  
22 training components). This evidence covered a wide range of training programmes.  
23 The committee agreed that the evidence broadly supported the benefit of parent-  
24 training interventions in tackling child behaviour problems, and in improving the child-  
25 carer relationship.

26 However, they noted that the components of these training interventions may differ.  
27 Common components in the interventions studied included teaching and information  
28 giving, focused on different aspects of parenting theory such as sensitive caregiving,  
29 attachment, social interaction learning theory, being trauma informed, and broader  
30 behavioural management techniques. To support teaching, some interventions used

1 video-feedback techniques; others used homework or home assignments, role play,  
2 coaching, practical activities, and follow-up booster sessions.

3 The committee noted that training can be expensive, and it is likely that different  
4 carers would need a different intensity of training. To reduce costs, a mandatory  
5 schedule of training could be delivered as a tutorial (perhaps virtually) to all carers.  
6 The committee were aware that mandatory training, for example - for foster carers,  
7 may already be extensive. However, rather than necessarily recommend additional  
8 capacity to deliver more training, the committee sought to recommend which topics  
9 were most important to include in existing training schedules for carers. In addition to  
10 these, more intensive methods could be used with carers of looked-after children  
11 and young people who have more severe emotional and behavioural problems.

12 Based on their experience and knowledge, they agreed that how to provide  
13 consistent, child-focused, and planned life story work to promote positive self-identity  
14 would be an important addition to the mandatory schedule of training for all foster  
15 carers.

16 The committee were not aware of any widely available training for carers on how to  
17 be an educational advocate. In their experience, some carers are good at it naturally,  
18 but this is not consistent. For example, some may feel a responsibility for providing a  
19 home for their child but not see educational advocacy as part of their 'role'. The  
20 committee agreed such training is necessary as part of the mandatory training for  
21 carers. The importance of involving the primary carer was backed up by UK-based  
22 interview and focus group evidence suggesting that looked-after children and young  
23 people preferred carer-delivered educational support (as opposed to interventions  
24 delivered by other adults or professionals), because of fears of yet more transient  
25 practitioners developing a relationship with them and then leaving.

26 The committee discussed subgroups of carers who may need more individualised  
27 training. Using their own experience and knowledge, they considered birth parents in  
28 situations in which reunification is a possibility. They recognised that joining  
29 mandatory training schedules may not be ideal for birth parents who may have  
30 significant personal challenges to overcome and need additional support.

1 The committee used UK-based interview and focus group studies and their own  
2 experience and knowledge to consider other subgroups of carers who may need  
3 specialised training. They looked at evidence highlighting the challenges for carers of  
4 adapting to a looked-after child or young person's cultural, religious, or dietary  
5 needs. For example, the committee recognised that certain ethnic groups may have  
6 hair and skin care needs that a carer would be expected to support. Likewise, carers  
7 of looked-after children and young people with special educational needs and  
8 disabilities may need specific training.

9 UK-based interview and focus group evidence and expert testimony both suggested  
10 the importance of a knowledge of trauma in those caring for the looked-after  
11 population. Based on their experience and knowledge, the committee agreed what  
12 trauma-informed training should cover. They recognised that there are multiple levels  
13 to this training, from simple awareness of trauma-related issues (for all carers and  
14 practitioners working with looked-after children and young people) to training in  
15 trauma-responsive care, which may be needed for more specialised carers and  
16 practitioners. For effective delivery of training programmes, the committee agreed it  
17 was important for trainers themselves to have a good understanding of trauma and  
18 attachment disorders as well as the various effective therapeutic approaches.

19 The committee also discussed evidence on a parent-training intervention for looked-  
20 after young people with behaviour that challenges or more severe mental health  
21 problems who are moving out of restrictive care and into the community. This  
22 showed it could help maintain their school placement and not return to care. The  
23 committee agreed that, in temporary placements for which training and development  
24 needs had been identified and delivered for current carers, new carers in the follow  
25 on or permanent placements would need the same training to provide consistent  
26 care. This would help continuity of behaviour management approaches and trauma  
27 and attachment-informed, high-support and high-nurturing relational care. The  
28 committee noted that this was particularly true for connected carers, who enter the  
29 fostering system quicker than mainstream carers. Often a child is placed with them  
30 while assessments are ongoing and there is little time for preparation and training.

1 **How the recommendations might affect practice**

2 Family support services already offer behavioural management support to birth  
3 families, but available training for foster carers and, particularly, other kinds of carers  
4 is more variable.

5 Training in educational advocacy for carers would be delivered by the virtual school.  
6 This could be delivered at low cost, virtually or in person.

7 Tailored support and training for birth parents if reunification is a possibility should be  
8 already available through transition plans with family support teams, and should not  
9 incur additional cost.

10 Cultural or religious needs, or needs related to race or ethnicity may need more  
11 tailored training for carers who have no expertise in these areas. Although this may  
12 come at some additional cost to time or resources, these looked-after children and  
13 young people form a minority of the overall looked-after population. In addition, it is a  
14 statutory duty to ensure that looked-after children and young people do not receive  
15 inferior care on the basis of race or religion.

16 Tailored support and training for carers if there are special educational needs and  
17 disabilities can be provided through specialist healthcare teams and voluntary  
18 organisations (for example, the National Autistic Society), thereby helping to keep  
19 costs down. Trauma-informed training and therapeutic parenting training for all foster  
20 carers is part of current practice in some local authorities. The recommendations will  
21 reduce variation in practice across the country. Intensive, specialist training given in  
22 the home is likely to incur substantial costs in some areas that do not already provide  
23 it, but these could be partially offset by preventing placement breakdown. Placement  
24 breakdown is associated with significant short-term costs because of increased  
25 social care case management work and the need for additional placement  
26 arrangements, some of which will be high-cost emergency placements. In addition,  
27 placement instability can have long-term consequences, contributing to further  
28 disruption of looked-after children and young people's social and emotional  
29 relationships, sense of belonging and educational outcomes.

1 Mandatory training schedules already exist for carers (particularly foster carers) and  
2 it is anticipated that trauma-informed training, and other recommended training  
3 components, could be incorporated into these sessions without the need for extra  
4 training capacity in many cases. For example, the committee noted that there is  
5 often already mandatory training on de-escalation that could feasibly be altered or  
6 updated to include trauma-informed practice. There are freely available resources for  
7 trauma-informed training and other kinds of training. Although there would be a cost  
8 associated with adapting these resources for purpose, these costs are expected to  
9 be minimal.

10 [Return to recommendations](#)

## 11 **Safeguarding**

12 [Recommendations 1.4.1 to 1.4.8](#)

### 13 **Why the committee made the recommendations**

14 The committee heard from experts about looked-after children who are at risk of  
15 criminal exploitation, going missing or are placed out of area. The experts highlighted  
16 the importance of multiagency working and appropriate data sharing for  
17 safeguarding looked-after children. The gave examples showing how important  
18 moments had been missed for sharing information between agencies (for example  
19 policing and social services), and how these missed moments had led to extremely  
20 negative outcomes for the looked-after child or young person involved. Although the  
21 committee noted that statutory safeguarding procedures exist, they agreed that once  
22 a child or young person had become 'looked after', any further safeguarding issues  
23 were often dealt with 'in-house' in the care system. Whichever safeguarding system  
24 was used, the committee considered the need for it to be as thorough as statutory  
25 systems of safeguarding while also addressing additional contextual safeguarding  
26 risks. These risks are more commonly an issue among those in care,

27 The committee discussed ways in which local authorities could facilitate multiagency  
28 working and data sharing. They suggested that review meetings were needed to  
29 bring together practitioners and facilitate information exchange. Based on expert  
30 testimony, and their own experience, the committee agreed that representatives from  
31 education, care, healthcare for looked-after children, and external services could

1 provide vital perspectives on safeguarding looked-after children and young people.  
2 Experts told the committee that it was very important to include the views of looked-  
3 after children (particularly those with special educational needs or disabilities) and  
4 their carers when shaping responses to exploitation and missing children. This  
5 supports shared decision making and makes responses effective, accessible, and  
6 acceptable to looked-after people and their carers.

7 Based on their experience and knowledge, and on hearing from experts, the  
8 committee discussed that safeguarding meetings offer an opportunity to educate and  
9 inform health and social care practitioners (for example, by bringing the perspective  
10 of emergency services to social workers), standardise risk assessment tools, and to  
11 review serious cases (to ask advice on developing situations, and learn lessons from  
12 any mistakes made previously).

13 Based on expert testimony, the committee considered that leadership was needed to  
14 organise successful multiagency review meetings, bring practitioners on board, and  
15 help define clear lines of accountability. The committee considered that leadership in  
16 multiagency working would be best provided by a specialist in contextual  
17 safeguarding, exploitation, and missing children in the looked-after population. If  
18 such a practitioner was not readily available, the committee considered that local  
19 authorities could build capacity by investing in training a trauma-informed specialist  
20 with knowledge of exploitation and safeguarding issues in the looked-after  
21 population.

22 Based on expert testimony, the committee discussed the kinds of data that are most  
23 readily available and useful across agencies to inform the safeguarding of looked-  
24 after children and young people, and assess the risk of exploitation in any given  
25 placement. The committee considered routinely collected indicators at the  
26 community level: area deprivation indexes, community-level health and mental  
27 health data, number of county lines operating in a single area, and missing person  
28 reports per 1,000 population (which were considered particularly linked to risk of  
29 trafficking).

30 The committee, in light of their experience and expert testimony, noted that risks and  
31 'red flags' may be different for certain subgroups, such as young girls and

1 unaccompanied asylum seekers, as well as the approaches needed to protect from  
2 exploitation or going missing. For example, young girls particularly may be at risk of  
3 sexual assault, domestic violence, and attempts through social media and otherwise  
4 to coerce and undermine self-esteem.

5 The committee heard from experts about the need for practitioners working with  
6 looked-after children and young people to be able to spot and communicate  
7 safeguarding risks. Based on this, the committee discussed the training needs of  
8 practitioners working with looked-after children and young people. The committee  
9 acknowledged that training is not inexpensive. However, training on the signs of  
10 exploitation or abuse, and 'red flags' for going missing, and how to 'flag' or report  
11 concerns about these could be included in the regular training schedule for all  
12 practitioners working with looked-after children.

13 The committee discussed how else multiagency working and review meetings could  
14 help to re-enforce and educate about 'reachable or critical moments'. That is,  
15 moments when looked-after children and young people at risk of criminal exploitation  
16 and grooming could be spotted and interventions employed at the earliest possible  
17 moment, particularly when looked-after children and young people could be more  
18 open to change and receiving support. Experts told the committee that any  
19 intervention could constitute a critical moment, for example attending an A&E  
20 department.

21 Likewise, evidence based on UK-based interview and focus group studies and  
22 expert testimony about gangs, criminal exploitation, and going missing in care  
23 strongly suggested that establishing a network of strong, supportive, positive  
24 relationships is the primary mechanism to protect looked-after people from these  
25 risks.

26 Experts also suggested to the committee that certain subgroups of looked-after  
27 young people may need more tailored care to address issues that increase their risk.  
28 These groups include young girls, who may have issues of low self-esteem, and be  
29 at risk of targeting on social media. Children with a history of trafficking and  
30 unaccompanied asylum seekers who have been subject to previous trauma or

1 exploitation. The committee was aware that tailored support for these groups is  
2 already offered through well-established organisations such as Abianda.

### 3 **How the recommendations might affect practice**

4 Tailored support for groups at particular risk from exploitation groups is an important  
5 and necessary safeguarding consideration for vulnerable groups. Existing  
6 organisations that already focus on these groups can help to supply such support, so  
7 this recommendation is unlikely to have a substantial additional resource impact. As  
8 well as improving outcomes for these groups, this tailored support may help to avoid  
9 future costs associated with negative outcomes, for example legal costs and costs  
10 associated with placement breakdown if relationships have deteriorated.

11 Necessary data are captured in most areas, but the information often needs to be  
12 better shared. This is unlikely to need increased resources because the data sharing  
13 mechanisms and roles for multidisciplinary teams already exist, and the emphasis of  
14 the recommendations is on bringing this work together. Using standardised language  
15 for things such as risk-assessment tools, processes and personnel titles across  
16 agencies and geographical areas is not expected to be resource intensive. It can be  
17 achieved over time by greater communication between agencies and local  
18 authorities.

19 Training in risk indicators is unlikely to have a substantial resource impact because it  
20 would probably be absorbed into and prioritised in existing staff training. Likewise,  
21 training to recognise suitable moments to reach out to the child could be  
22 incorporated into existing training for foster carers and social workers.

23 [Return to recommendations](#)

### 24 **Building expertise in local authorities about trauma and raising** 25 **awareness**

26 [Recommendations 1.5.1 to 1.5.3](#)

### 27 **Why the committee made the recommendations**

28 The committee considered UK-based evidence from interview and focus group  
29 studies and heard from experts about the high prevalence of trauma in looked-after

1 children and young people. Based on this and their own experience and knowledge,  
2 the committee agreed that all practitioners working with looked-after children and  
3 young people need greater awareness of the impact of trauma, including  
4 developmental trauma, and attachment disorders. Such awareness is vital for  
5 spotting safeguarding situations. It can also help practitioners working with looked-  
6 after children and young people to better understand them and communicate more  
7 effectively with them.

8 UK-based evidence from interview and focus group studies and expert testimony  
9 highlighted specific issues faced by unaccompanied asylum seekers. The committee  
10 agreed that those who were working with unaccompanied asylum seekers needed to  
11 have additional awareness of the specific risks facing this group and issues that may  
12 arise when providing care.

13 The committee noted that when social workers are trauma informed, they can make  
14 sense and meaning of how the child is forming and maintaining relationships, in  
15 context of their experiences. As the lead practitioner they can influence how the  
16 network views the child, what language is used and how it will be most helpful to  
17 support them in more helpful positive relationships. This is the ripple effect of  
18 different levels of trauma training for the network.

### 19 **How the recommendations might affect practice**

20 Additional training on the specific needs of unaccompanied asylum seekers,  
21 including invited feedback from children that were once cared for in these  
22 circumstances and specialist organisations in the voluntary sector, could be provided  
23 as part of existing in-house training. Funding should already be available through  
24 general funds that support routine training and activities (for example, team  
25 awareness days) for healthcare professionals.

26 Consultation may be provided from more advanced social workers or from  
27 multiagency professionals in the network, so it should not incur cost. However, the  
28 committee were aware that such consultation work would mean less time for case  
29 work, and therefore would incur some time costs. Consultation provided by specialist  
30 agencies and professions may need to be bought in, for example experts on sexually  
31 harmful behaviour.

1 [Return to recommendations](#)

## 2 **Physical and mental health and wellbeing assessments**

3 [Recommendations 1.5.4 to 1.5.11](#)

### 4 **Why the committee made the recommendations**

5 The committee considered the importance of keeping good health records for  
6 looked-after children and young people. Based on some interview and focus group-  
7 based evidence and the committee's own experience and knowledge, the committee  
8 considered that it was important to obtain a full health record from the birth parents,  
9 particularly information about antenatal and postnatal health. They noted that gaining  
10 consent for this may be a difficult or lengthy process. So the committee discussed  
11 the importance of attempting to gain this consent as soon as possible in the care  
12 process, to prevent missing important health information that could be important for  
13 directing the plan of care.

14 UK-based interview and focus group studies frequently emphasised that looked-after  
15 people and their carers appreciate continuity of care practitioners. The committee  
16 discussed the importance of having a continuous healthcare professional who is  
17 familiar with the looked-after child, and their medical and social history, to perform  
18 routine health assessments. They agreed this is important both to promote a trusting  
19 relationship between the child and the medical practitioner and to improve  
20 adherence with medical care, but also to help the practitioner to spot changes in the  
21 health needs of the child to support better care.

22 The committee highlighted that the initial health assessment is an important event for  
23 looked-after children and young people because it allows their existing needs to be  
24 identified and forms the base of an individualised care plan. The committee were  
25 therefore concerned that the initial health assessment should include an accurate  
26 and comprehensive history of the person's health.

27 Evidence from UK-based interview and focus group studies suggested the need for  
28 carers to receive more complete and better quality information about the child at the  
29 start of care, which could include a compilation and summary of health records. The  
30 committee noted that work to compile records is done inconsistently across local

1 authorities. The committee considered that compiling good records had the potential  
2 to transform the care of looked-after children by facilitating the flow of information  
3 between agencies and preventing identified needs and actions in the health plan  
4 from becoming lost.

5 Using some interview and focus group-based studies and their own expertise and  
6 knowledge, the committee considered the fact that care leavers very often request  
7 access to their health and social care records. Care leavers may do this to help  
8 make sense of their own journey through the care system. However, if the language  
9 used in the records is depersonalising or judgemental, this can result in significant  
10 emotional hurt and offense. The committee therefore agreed that health and social  
11 care practitioners should be aware of this risk.

12 Evidence from UK-based interview and focus group research and from expert  
13 testimony strongly supported the need for a culturally appropriate, registered  
14 interpreter to communicate in person with looked-after children and young people for  
15 the initial health assessment. And, if language remains a barrier to communication,  
16 for the same service at subsequent health and social care assessments. However,  
17 the committee noted this was particularly important for the first health assessment,  
18 which must be thorough and capture all aspects of health needs accurately to  
19 provide appropriate support. The committee considered in-person translations to be  
20 particularly important because of the difficulty receiving translation services over the  
21 phone. Unaccompanied asylum seekers were especially in need of these services.

22 Experts highlighted many specific health needs of unaccompanied asylum seekers  
23 compared with the broader population of looked-after children and young people in  
24 the UK. Unaccompanied asylum seekers were also frequently found to have  
25 problems with their sleep schedule as a result of travelling long distances, often with  
26 continuously disturbed sleep. So the committee agreed that tailored initial health  
27 assessments should address the additional risks to unaccompanied asylum seekers  
28 as a result of their country of origin and journey to the UK.

29 The committee considered mental health screening for children who were entering  
30 care. Some low-quality evidence showed that using an in-depth assessment  
31 identified more children needing support and helped with providing early

1 interventions than with the current initial health assessment. The committee agreed  
2 that current initial health assessments were often insufficiently detailed to pick up  
3 mental health needs and it was important for healthcare professionals to consider  
4 the need for a specialist mental and emotional health assessment after the initial  
5 health assessment. This is particularly important for babies and children because  
6 their mental health needs are often missed. Based on committee experience and  
7 knowledge, the committee noted that this second assessment is better carried out  
8 once the looked-after child or young person has begun to form a relationship with the  
9 primary carer because mental health may improve as a result of a secure attachment  
10 relationship.

11 The committee reflected on less robust evidence (not from randomised controlled  
12 trials) showing that auditing systems before and after health assessments improved  
13 the uptake of health actions. The committee also considered the problem of actions  
14 in the health plan not being followed up or completed (either within a reasonable  
15 timeframe or at all). Based on this evidence and their own experience, they agreed it  
16 was important that the completion of actions in the health plan be audited to ensure  
17 the agreed service has been provided. This would need multidisciplinary input  
18 because some actions may be undertaken by other agencies.

### 19 **How the recommendations might affect practice**

20 The initial health assessment is a statutory requirement so there should not be any  
21 additional costs to the system, although auditing the health plan may need additional  
22 time from the team of health professionals involved. A detailed and well-documented  
23 plan can help with timely provision of care, thereby avoiding costs of delay and an  
24 overall negative experience for the looked-after child or young person.

25 Healthcare professionals performing the initial health assessment in unaccompanied  
26 asylum seekers may need additional training on the specific physical and emotional  
27 needs of such children, and on risk factors associated with specific countries of  
28 origin/route of travel and the context of the child's expatriation. This training,  
29 including feedback from children that were once cared for in these circumstances  
30 and testimonies from specialist organisations in the voluntary sector, could be  
31 provided as part of existing in-house training. Funding should already be available

1 through general funds that support routine training and activities (for example team  
2 awareness days) for healthcare professionals.

3 Specialised translation services incur costs, but a child's right of expression is  
4 mandated by statutory guidance so expenditures on such services are justified.

5 [Return to recommendations](#)

## 6 **Mental health and child and adolescent mental health services**

7 [Recommendations 1.5.12 to 1.5.14](#)

### 8 **Why the committee made the recommendations**

9 UK-based evidence from interview and focus group studies frequently highlighted the  
10 frustration felt by looked-after children, young people and their carers about delays  
11 and waiting lists for mental health support. The committee considered the common  
12 problem of delayed support for CAMHS, and systems that they had seen in practice  
13 help avoid the delay of therapeutic support for looked-after children and young  
14 people. For example, therapeutic social workers, systems for outreach connected to  
15 CAMHS (for example a psychologist or another worker embedded within CAMHS),  
16 or a specialist looked-after children and young people team within CAMHS.

17 However, other evidence, also from interview and focus group studies, highlighted  
18 the damage that can be done by introducing a child or young person to a new  
19 therapist, only for the therapist to change once CAMHS have taken over care. This  
20 can lead to demoralisation and disengagement from mental health interventions.  
21 Therefore, the committee agreed that intermediate therapeutic or specialist support  
22 should be provided for the care network around looked-after children and young  
23 people, rather than to looked-after people themselves. The committee were keen to  
24 stress that this intermediate support was only to address the delay, and should not  
25 be a replacement for CAMHS itself.

26 Further interview and focus group-based evidence and expert testimony reflected  
27 how CAMHS are often inappropriate and not designed for the needs of looked-after  
28 children and young people. Traditional techniques such as behavioural therapy-  
29 based interventions, were not always suitable for looked-after children and young

1 people, who may need interventions that are more relationship-based and trauma-  
2 informed interventions.

3 One committee member stated that some CAMHS teams have specialist looked-  
4 after children services, but this is variable across the UK. The committee agreed it  
5 was important to encourage the incorporation of prioritised specialist services within  
6 CAMHS, to prevent the need for tier 3 or 4 services for looked-after children and  
7 young people further down the line.

8 Expert testimony highlighted the likelihood that all unaccompanied asylum seekers  
9 had experienced some form of trauma, as a minimum through the separation from  
10 their own parents, and that health and social care practitioners supplying care for this  
11 vulnerable population need specialist training. The committee agreed the importance  
12 of taking into account the different perspectives of unaccompanied asylum seekers  
13 in a mental health service setting.

14 UK-based evidence from interview and focus group studies and expert testimony  
15 also reflected the importance of cultural sensitivity and awareness of potential  
16 traumatic symptoms in unaccompanied asylum seekers. For example, they may  
17 have highly stigmatising views of mental health problems, based on previous cultural  
18 ideas, and may be reluctant to admit the experience of trauma or problems with  
19 mental health.

20 The committee noted that unaccompanied asylum seekers were likely to need a  
21 tailored approach to mental health support, but there was insufficient evidence to  
22 recommend any specific intervention. Therefore they made a recommendation for  
23 research (see [research recommendation 3](#)).

#### 24 **How the recommendations might affect practice**

25 Providing dedicated CAMHS services for looked-after children may have substantial  
26 resource implications if an expansion of the existing CAMHS services and capacity is  
27 needed. However, these dedicated services for looked-after children and young  
28 people are mandated by statutory guidance. Alternative interventions (trauma-  
29 informed and those focusing more on relationships) may not necessarily come at  
30 greater cost than traditional behavioural approaches. However, tailored approaches

1 would have greater adherence (for example, fewer non-attendances and  
2 disengagement), thereby resulting in greater effectiveness. The committee  
3 considered that greater engagement in mental health services at an earlier stage can  
4 reduce the risk of more serious mental health problems and the need for the higher  
5 tier treatments later down the line (where the greatest pressure on CAMHS services  
6 was suggested to be).

7 Intermediate therapeutic or specialist support for the care network around looked-  
8 after children and young people, to reduce waiting times, may need some  
9 restructuring of services and additional cost. However, in some parts of the country  
10 existing services could fill this gap; for example, therapeutic social workers, CAMHS  
11 outreach systems (for example a psychologist or another worker embedded within  
12 CAMHS), or a specialist looked-after children and young people team within  
13 CAMHS.

14 [Return to recommendations](#)

## 15 **Life story work for identity and wellbeing**

16 [Recommendations 1.5.15 to 1.5.25](#)

### 17 **Why the committee made the recommendations**

18 UK-based evidence based on interview and focus group studies showed that forming  
19 positive relationships was probably the best possible intervention to prevent  
20 placement instability. Life story work has the potential for building relationships (for  
21 example, by sharing joint activities). In addition, it is a trauma-focused technique and  
22 could help with discussing and negotiating care plans (by outlining felt priorities and  
23 experiences). However, evidence showed that life story work was often neglected or  
24 poorly completed in practice, was often started late in the care process, and was  
25 given little priority or investment. This supported the committee's own experience  
26 and knowledge. The committee discussed the importance of standardising life story  
27 work and starting it at the earliest opportunity after entry into care. They agreed this  
28 could support placement and emotional stability by helping the looked-after child or  
29 young person make sense of their journey through care.

1 Based on UK-based interview and focus group evidence and committee experience,  
2 the committee discussed the importance of time for life story work being clearly set  
3 aside, with a named practitioner to ensure there is time for it to be completed to a  
4 sufficient quality. The relational aspect of this intervention could also be supported by  
5 having it conducted by a carer or practitioner the looked-after child or young person  
6 has a close and continuous relationship with. The committee agreed it was important  
7 for this work to take place in the context of a safe and continuous relationship,  
8 because conversations would be of a personal nature.

9 The committee discussed the key components of life story work, based on their  
10 experience and knowledge. They agreed that this work consists of building a  
11 narrative that focuses first on the present identity and strengths; before moving onto  
12 the past and reasons for entering care; and finally turning thoughts to the planning  
13 for and building hope towards the future.

14 Based on committee experience and knowledge, and some interview and focus  
15 group evidence, the committee then considered how this may be achieved.  
16 Techniques such as life mapping, use of pictures, art, written narratives, toys and  
17 play have been used successfully. The committee agreed that these discussions  
18 should be compiled in one place and built on during regular sessions. The committee  
19 felt the approach should be flexible according to the needs and response of the  
20 looked-after child or young person and should be a shared experience, in a setting  
21 preferred by the looked-after person.

22 The committee took into account their own experience and knowledge in considering  
23 the role that life story work could play in cultivating a positive self-image and identity,  
24 that is, one that embraces the looked-after child or young person's ethnic, cultural or  
25 religious differences, as well as sexual identity and disabilities.

26 The committee stated that the effectiveness of the life story work was closely related  
27 to its quality, and agreed that having social worker oversight could help to maintain  
28 standards. It would also allow the social worker to provide additional information to  
29 support the carer or practitioner performing the life story work.

30 Based on their own experience, the committee considered life story work that  
31 involves more people than the practitioner and the looked-after child or young

1 person. For example, sometimes it may be useful to perform life story work with  
2 siblings as a group or pair, because they may have had very difference perspectives  
3 of shared life events that need to be reconciled. The committee agreed that the need  
4 for shared life story work should be carefully planned to ensure it did not destabilise  
5 sibling relationships, for example by divulging sensitive information. In addition,  
6 particularly for complex situations such as these, it was important for the experience  
7 and skillset of the practitioner carrying out the life story work to match the complexity  
8 of the care situation. This may need the direct attention of a social worker rather than  
9 the primary carer.

10 Based on their own experience and knowledge, the committee agreed that the  
11 network around looked-after children and young people was important to support  
12 ongoing life story work. The committee deemed it vital that the idea and purpose of  
13 life story work and its importance was expressed to the social work team, carers,  
14 educational staff, and birth family. Broader social networks can then be engaged in  
15 the work when needed. Birth families may need to encourage consistency in  
16 narratives explored and reframing previous relationships.

### 17 **How the recommendations might affect practice**

18 Life story work is mandated by statutory guidance for all looked-after children and  
19 young people with a plan for adoption. It is already current practice and these  
20 recommendations can be easily integrated into the process. Although the  
21 recommendations may necessitate a greater standard of life story work (for example,  
22 with more detail and more time devoted to it) in some cases, the committee agreed  
23 that these changes were necessary for the work to be effective and achieve its aims.  
24 Training to ensure a consistent approach to life story work could be incorporated into  
25 existing training. Social worker oversight for life story work conducted by another  
26 practitioner is anticipated to have minimal resource implications because the work is  
27 either already being conducted by the social worker or would simply need the social  
28 worker being informed of the content of that work.

29 [Return to recommendations](#)

### 30 **Physical touch, relationships, and wellbeing activities**

31 [Recommendations 1.5.26 to 1.5.29](#)

## 1 **Why the committee made the recommendations**

2 UK-based interview and focus group-based evidence frequently emphasised that  
3 positive relationships were the most important aspect of care to looked-after children  
4 and young people and care leavers. And that, along with placement stability, they  
5 are most linked to social, emotional, and mental wellbeing. They discussed that the  
6 cornerstone of positive relationships was the relationship with the primary carer. So  
7 they agreed that, before recommending specific interventions to support social,  
8 emotional, and mental wellbeing, the focus of support needs to start with a stable  
9 care placement and a strong supportive relationship with the primary carer.

10 Interview and focus group-based evidence showed that some primary carers, for  
11 example in residential care or foster care, had concerns about providing physical  
12 touch and affection for looked-after children and young people. The committee  
13 discussed that physical affection, particularly for younger looked-after children, could  
14 be a major source of emotional stability and wellbeing, and yet may be deprived in  
15 some cases because of the primary carers' desire to be protected from any form of  
16 allegation. They agreed that in some cases it may be necessary to proactively  
17 promote or encourage appropriate physical affection (for example through play) and  
18 that the need for physical touch and affection as a part of a healthy relationship with  
19 the primary carer should be taken into account in safer caring plans.

20 A variety of evidence reflected the importance of shared activities to help bond  
21 relationships with peers, practitioners, or carers. The committee considered that peer  
22 support could be particularly important among looked-after children and young  
23 people because, given the absence of strong family ties, they may place more  
24 emotional investment in friendships and other non-conventional relationships (for  
25 example, with care practitioners). They agreed that it was important to support the  
26 interests and hobbies of looked-after children by setting aside time for outings that  
27 would help them invest in these interests, as well as their close relationships.

28 The committee considered that looked-after children are more likely to be overweight  
29 and obese than standard norms and many come into care with a poor nutritional  
30 status. They recognised a gap in good quality research for interventions to help  
31 improve diet and exercise, as well as other lifestyle factors such as drug and alcohol  
32 use, among looked-after children and young people, and made a [research](#)

1 [recommendation on promoting physical exercise and a healthy diet and lifestyle](#). In  
2 the absence of good quality research to support interventions to improve diet and  
3 exercise among looked-after children and young people, the committee cross  
4 referred to existing NICE guidance on physical activity, obesity prevention and  
5 weight management in children and young people, broadly.

## 6 **How the recommendations might affect practice**

7 Facilitating and supporting activities such as school clubs would be unlikely to have a  
8 significant resource impact. Funding for group activities may have more substantial  
9 resource implications, so these would need to be limited to freely available or  
10 inexpensive activities. Some group activities, particularly school clubs, could be  
11 prioritised for funding through the pupil premium grant.

12 [Return to recommendations](#)

## 13 **Readiness for starting or changing school**

14 [Recommendations 1.6.1 to 1.6.3](#)

## 15 **Why the committee made the recommendations**

16 The committee considered USA-based evidence on therapeutic playgroups for  
17 children in kindergarten entering second grade aged 7 to 8. These resulted in  
18 improved parent-rated social competence and emotional stability. But this evidence  
19 was from a small trial with no long-term follow-up. Because of this, and the expense  
20 of running therapeutic playgroups, the committee did not recommend them  
21 specifically. But they agreed that early years education should include opportunities  
22 to improve socialisation, such as early years education in playgroups as well as  
23 other opportunities to encourage child-led play.

24 The committee considered evidence from robustly designed studies on transition-to-  
25 school programmes for looked-after-children of primary school age. These resulted  
26 in improved early literacy skills, self-regulatory skills, self-competence, and attitudes  
27 towards alcohol and antisocial behaviour, as well as days free from internalising  
28 symptoms. They also reduced aggressive behaviours. A similar programme for  
29 secondary-school-aged children resulted in improved emotional, social, and  
30 behavioural scores and reduced substance use.

1 The committee considered the broadly positive findings for readiness for school  
2 interventions, alongside the problems with study quality and assessment of  
3 effectiveness. But they highlighted that, particularly for a child returning to school  
4 after prolonged absence, the need of a child to cope with the possibility of peers and  
5 parents of other children finding out about their 'looked-after' situation could be  
6 traumatic, and that this is particularly a risk if the child is receiving special  
7 interventions for education. Other evidence from UK-based interview and focus  
8 group studies suggested that looked-after children and young people did not  
9 necessarily want more professionals or programmes in their lives.

10 The committee therefore agreed there was a broad benefit of tailored transition  
11 support into new school placements. However, they favoured approaches that would  
12 help ease the looked-after child or young person into the new school placement but  
13 not single them out. The committee also agreed that transition to a new school  
14 placement may need input from professionals beyond those in education.

### 15 **How the recommendations might affect practice**

16 The resource impact of these recommendations is expected to be low. Early years  
17 support should already be provided as a statutory service, so little additional  
18 resource expenditure should be needed, other than greater prioritisation of  
19 playgroups from existing funds. Transition support and services are also currently  
20 supported by the virtual school. Additional interventions to support the transition can  
21 be prioritised through the pupil premium grant, which is part of statutory education  
22 funding provision for looked-after children and young people.

23 [Return to recommendations](#)

### 24 **Support in schools**

25 [Recommendations 1.6.4 to 1.6.7](#)

### 26 **Why the committee made the recommendations**

27 The committee heard from experts that educational resources were available to  
28 support looked-after children, but they may not be being spent in the most effective  
29 way. The committee agreed that ensuring that looked-after people and their carers  
30 know about their rights to educational support (for example, the purpose of the pupil

1 premium grant for education, and how it is distributed) would encourage  
2 accountability in spending.

3 The committee discussed the importance of trauma-informed practices for all  
4 practitioners working with looked-after people. Based on expert testimony, and on  
5 interview and focus group-based evidence describing the needs of looked-after  
6 people with trauma, the committee considered that standard behavioural policies in  
7 schools may not be adequate or may even be harmful for young people with a  
8 history of trauma and disorganised attachment. They agreed that it was important for  
9 schools and regulators to understand the impact of behaviour management policies  
10 on trauma.

11 UK-based interview and focus group evidence showed that looked-after children and  
12 young people experienced a shortage of adults who have higher expectations and  
13 aspirations for their education, as well as positive role models and tailored  
14 (individualised) support for education. Based on expert testimony and their own  
15 experience, the committee discussed the need for a strong educational advocate for  
16 looked-after children and young people. This would be someone who is invested in  
17 and supportive of the person's education and is willing and informed enough to fight  
18 for the educational provisions that a looked-after child or young person should  
19 receive by statutory right (and beyond). The committee agreed that this role is most  
20 readily fulfilled by the designated teacher. As well as a committed educational  
21 advocate on the school site, the committee agreed that educational advocacy needs  
22 should also come from the primary carer. However, the committee agreed that in  
23 many cases the foster carer's role in their child's education had not been sufficiently  
24 encouraged.

25 The committee agreed that the role of the designated teacher is carried out with  
26 variable quality across the UK. Therefore, the committee felt it important to outline  
27 the key principles of practice that this role should include to improve the advocacy  
28 relationship with looked-after child or young person in school settings. They  
29 discussed the need for the designated teacher to collaborate with those who have  
30 the best information to support and direct the looked-after person's educational path.  
31 The committee used their own experience and knowledge to identify personnel as  
32 useful partners for this.

1 The committee used interview and focus group-based evidence and their own  
2 experience and knowledge to clarify the role further. They discussed evidence in  
3 which carers had identified and organised the diagnosis of educational issues  
4 themselves (such as dyslexia). They considered that it would be better for the on-site  
5 educational advocate (the designated teacher) to identify and organise such  
6 assessments, and in a more timely manner. Therefore, the committee agreed that  
7 the designated teacher should ensure ongoing monitoring of learning needs,  
8 particularly during placement transition (which can be a time of greater educational  
9 and emotional challenges).

10 The committee also considered that multiagency review meetings, including those  
11 from the virtual school and the designated teacher, may need input from  
12 professionals beyond those in education. Therefore, they agreed that a designated  
13 teacher needs to be sufficiently competent to refer for specialist support if necessary.

14 The committee emphasised that one of the most important roles of the designated  
15 teacher (acting as educational advocate) was to 'check in' with the looked-after child  
16 or young person regularly, whether or not they have any special educational needs.  
17 Check-ins can help to develop rapport with the looked-after person and build a  
18 supportive relationship. Because interview and focus group-based evidence  
19 highlighted the importance of maintaining confidentiality about care status wherever  
20 possible, especially in school, the committee were keen that these check-ins should  
21 not add more stigmatising and formal meetings to the looked-after person's  
22 schedule. Rather, the designated teacher could have regular one-to-one informal  
23 conversations with them. The committee agreed that the frequency of these  
24 conversations should be informed by the looked-after person themselves, as some  
25 may favour less intense supervision.

## 26 **How the recommendations might affect practice**

27 Advocacy by a named teacher is not anticipated to need significant additional  
28 resources, because this is already part of the statutory role of the designated  
29 teacher. The committee recognised that there are time-resource implications in  
30 performing this role to a high standard.

31 [Return to recommendations](#)

## 1 **Virtual schools**

### 2 [Recommendations 1.6.8 to 1.6.14](#)

#### 3 **Why the committee made the recommendations**

4 The committee noted that no consistent model of a virtual school was apparent  
5 across the country but that some common features could be identified. As part of  
6 this, there was a discussion about the constituent members within a virtual school  
7 and the external services that should be linked through the virtual school.

8 The committee discussed including early years practitioners within the virtual school.  
9 Based on expert testimony, and their own experience, they noted that early years  
10 expertise was not statutory in virtual schools. Smaller numbers of looked-after  
11 children in the early years group meant they were often allocated relatively small  
12 budgets. The same was true at the other end of education age range - early years  
13 and over-16 groups are not well provisioned, with most money devoted to school-  
14 aged children and young people.

15 The committee considered there was a need for early years expertise alongside the  
16 virtual school head to provide oversight of interventions to support the early years  
17 education of looked-after children, and champion educational services for children  
18 during the pivotal younger years. Based on their experience and knowledge, the  
19 committee suggested that information to support this role needed to be brought in  
20 through collaboration with nurseries, health visitors, and routinely collected data.

21 Expert testimony highlighted the need for closer working between the virtual school  
22 head and the special educational needs (SEN) service. The virtual school team need  
23 to have a breadth and depth of knowledge across social care, education and health  
24 and to understand the legislation for each area. Very few social care staff have a  
25 working knowledge of the SEN code of practice or the legislation that underpins it.  
26 As a result, the committee considered the need for someone with SEN experience in  
27 the virtual school, ideally a special educational needs coordinator or someone with  
28 SEN specialism or training.

29 Based on their own expertise, the committee considered that the inclusion of a post-  
30 16 coordinator in the virtual school could help bridge the gap in information for those

1 in care hoping to achieve higher or further education – for example, by helping with  
2 the application processes for entrance to college, university, or further training (and  
3 support while there). Therefore, help was needed to help looked-after people  
4 aspiring to further education to navigate the available support.

5 The committee recognised that the expertise needed within the virtual school was  
6 likely to vary based on the demographics of the population being served. Therefore,  
7 they considered the need to take into account the prevalence of groups of special  
8 interest in each local authority when expertise for the virtual school was being  
9 recruited. They noted that the prevalence of some groups of special interest varied  
10 significantly between local authorities.

11 As a result of expert testimony, the committee recognised that often, virtual school  
12 heads had not been properly empowered or used and their role had not been  
13 properly defined. In some cases the virtual school head may be a peripheral figure,  
14 rather than a key leader enacting change in the local authority. Therefore, the  
15 committee agreed that, to be able to complete its statutory duties, the virtual school  
16 head should be considered the key leader and enabler for the collaboration of  
17 educational services for looked-after children and young people.

18 Expert testimony outlined the range of professionals with a statutory remit to work  
19 with, and promote, the needs and wellbeing of children and young people in care  
20 and education. These professionals are asked to work together, but the expert noted  
21 that this often does not happen sufficiently in practice. In the experience of the  
22 expert, a clear bridge is needed between the services, and when this role is taken up  
23 by the virtual school the links work much better. The committee agreed and outlined  
24 a list of services for which the virtual school head should act as a 'bridge'.

25 Based on their expertise and knowledge, the committee noted that simplifying and  
26 merging looked-after children review meetings would support multiagency working.  
27 For example, merging annual reviews and personal education plan (PEP) meetings  
28 could make it easier for specialists in education and social care to communicate,  
29 while also reducing the number of overall meetings that looked-after children and  
30 young people need to attend. The committee also considered the importance of

1 including the health perspective in multiagency review meetings when health  
2 problems impacted education.

### 3 **How the recommendations might affect practice**

4 Every school in the UK is obliged to employ a special education needs coordinator  
5 (SENCO), so ensuring one is part of the virtual school team would not incur  
6 additional resources. Some virtual schools may not have an existing early years  
7 practitioner, so there would be resource implications from adding another staff  
8 member to the team. However, it is possible that such expertise could be found, or  
9 developed (using training), in existing professionals in the virtual school.

10 Reviewing meeting structures and condensing them into fewer meetings if possible  
11 would not need additional resources, because it would reduce the number of  
12 meetings being organised and held.

13 The recommendation for virtual school heads to form a bridge between named  
14 specialists in education, social, health and mental health care is not anticipated to  
15 have a significant resource impact because these roles already exist and would not  
16 need an additional staff member at the virtual school.

17 [Return to recommendations](#)

### 18 **Improving educational outcomes**

19 [Recommendations 1.6.15 to 1.6.18](#)

### 20 **Why the committee made the recommendations**

21 The committee considered evidence, from robustly designed studies, about  
22 interventions tested mainly in primary-school-aged children. There was some  
23 evidence that tutoring by foster parents or volunteer improved maths and some  
24 literacy scores; these were outcomes that the committee considered to be important.  
25 However, the evidence base had some problems in quality and the committee noted  
26 some carers may not want to take on the responsibility for tutoring because this can  
27 blur the line between the carer and educator roles.

28 The committee considered that flexibility was important when choosing the tutoring  
29 style that best suits the child and the placement. Evidence from studies with weaker

1 designs (non-randomised controlled trial) showed that a paired reading intervention  
2 greatly improved reading age over the course of the intervention. Although, again,  
3 the evidence was limited, the committee were impressed by the reported size of  
4 effect.

5 The committee considered that paired reading had potential for increasing  
6 communication and engagement between foster carers and schools. In addition, it  
7 was a simple, cheap, and already widely used intervention in primary schools (with  
8 parents often encouraged to take part). It showed good evidence of effectiveness,  
9 and had historical use, beyond looked-after children. Paired reading was also  
10 considered to have a relational aspect, improving quality time spent between carer  
11 and child. Older students in primary school could engage in paired reading with  
12 younger students, which may also provide an important mentoring role.

13 The committee discussed tutoring among looked-after young people attending  
14 secondary school. They noted that a large amount of money is spent on tutoring, but  
15 there is a lack of evidence on its effectiveness for looked-after young people. The  
16 committee therefore did not recommend a specific intervention but instead agreed,  
17 based on their own experience, that interventions for improving education in  
18 secondary-school-aged looked-after children are regularly evaluated.

19 UK-based evidence from interviews and focus group studies and expert testimony  
20 showed the importance that unaccompanied asylum seekers placed on educational  
21 attainment and learning English. The committee agreed that teaching an  
22 unaccompanied asylum seeker to speak English fluently was one of the first steps to  
23 helping them acclimatise to the country, settle with their primary carer, build positive  
24 social networks, and succeed educationally. Therefore, the committee agreed that  
25 English language lessons were important for those who are not fluent, and intensive  
26 lessons be considered for those with no previous knowledge of English.

27 Likewise, the committee recognised that additional support would be necessary in  
28 mainstream educational settings for those who did not speak English fluently. So  
29 they agreed that virtual schools should consider increased specialist educational  
30 provision for unaccompanied asylum seekers.

1 The committee noted a gap in the evidence base on the use of therapeutic  
2 interventions in current practice such as art therapy, play therapy, occupational  
3 therapy, music therapy and psychotherapy. The committee highlighted these  
4 interventions as being known to have a positive impact on educational, social and  
5 emotional outcomes in broader populations of children. They made a [research](#)  
6 [recommendation on therapeutic interventions for promoting school stability](#) and  
7 learning to assess the effectiveness of these interventions on improved learning  
8 outcomes, school attendance and exclusion to help address this evidence gap.

### 9 **How the recommendations might affect practice**

10 There were no published cost-effectiveness evidence for most of the learning  
11 interventions but the resource impact for recommended interventions is expected to  
12 be low. There may be some hidden costs such as carer or volunteer time, training,  
13 travel and administrative support.

14 Paired reading is currently provided to all children in primary schools, so no  
15 additional resource is needed. Infrastructure may be needed for extra support or  
16 training for foster carers on active reading and to train volunteer paired readers.  
17 Virtual schools may be best placed to deliver training in paired reading to foster  
18 parents. The only extra costs involved should be for foster carers actually attending  
19 training, and costs may be even lower if delivered virtually.

20 Individual or small group tutoring delivered by trained foster carers or trained  
21 volunteers would have a low resource impact, but professional tutors would have  
22 higher cost implications.

23 These interventions can be prioritised for funding through the pupil premium grant,  
24 which is part of statutory education funding provision for looked-after children and  
25 young people.

26 This trauma-informed training for teachers could be incorporated into the existing  
27 provision for behavioural management training, so is not anticipated to have a  
28 substantial resource impact.

29 [Return to recommendations](#)

## 1 **Data collection, sharing, and publication in education**

### 2 [Recommendations 1.6.19 to 1.6.21](#)

### 3 **Why the committee made the recommendations**

4 Evidence from expert testimony highlighted the importance of developing systems of  
5 accountability by gathering and sharing data that could help monitor and evaluate  
6 services around education for looked-after children and young people. They noted  
7 that no data were being collected on the responsibility of local authorities to secure  
8 education provision. For example, many looked-after children are not placed on a  
9 school roll (defined by having a Department for Education number) by their corporate  
10 parent. In addition, there may be a culture of ignoring statutory responsibilities in this  
11 area because of lack of oversight, use of unregistered provision, and 'ghost rolls'.

12 The committee discussed evidence from expert testimony about placement of  
13 children in unregistered schools, which results in their data not being captured in  
14 national attainment figures. This may create a perverse incentive for local authorities  
15 not to secure appropriate provision in order to artificially improve national attainment  
16 figures. The committee agreed that local authorities should collect and publish  
17 information on the educational provision for looked-after children, with a particular  
18 focus on children missing education as well as the strategy for reducing that number.

19 The committee discussed expert testimony on the lack of accountability for how the  
20 pupil premium grant was being spent. Schools and local authorities do not routinely  
21 collect data to demonstrate that education funding for looked-after people is being  
22 spent within the terms of the grant. This hampers the ability to evaluate the spending  
23 of the pupil premium grant to improve outcomes or to ensure that the funds are used  
24 directly for the benefit of looked-after children and young people. The committee  
25 noted that the Department for Education have acknowledged that they are not able  
26 to hold local authorities accountable for either spending of the pupil premium grant or  
27 provision of educational placements, because of the lack of available data.

28 Therefore, the committee agreed that the spending of the total pupil premium grant  
29 within local authorities needs to be tracked to develop a mechanism of  
30 accountability.

## 1 **How the recommendations might affect practice**

2 Collecting and publishing information on the educational provision for looked-after  
3 children, particularly those who are missing education and a strategy for reducing the  
4 number of these children, and developing a checking mechanism for the spending of  
5 the pupil premium grant is unlikely to have a significant resource impact. Although  
6 these data are not currently collected consistently across local authorities there are  
7 existing mechanisms to do so. There are also existing mechanisms for checking  
8 local authority spending, so checking educational spending for looked-after children  
9 and young people could be incorporated into existing spending checks.

10 [Return to recommendations](#)

## 11 **Further and higher education**

12 [Recommendations 1.6.22 to 1.6.23](#)

## 13 **Why the committee made the recommendations**

14 The committee considered evidence from robustly designed studies on interventions  
15 to help looked-after young people aspire to, and be equipped for, higher education.  
16 They acknowledged that entry into further or higher education is very different for  
17 looked-after children and young people than for the wider population. For example,  
18 they have broadly lower expectations of ever attending higher education and may  
19 consider this to be something that they are not able to achieve. Interventions need to  
20 be tailored accordingly.

21 Particularly, evidence from a study of individual coaching and group mentoring, with  
22 a summer visit and stay at a university campus, showed improvements in several  
23 measures of readiness for post-secondary education. Most importantly, there was a  
24 considerable improvement in post-secondary participation at 6-month follow-up in  
25 the intervention group.

26 Based on evidence from robustly designed studies, and some interview and focus  
27 group-based evidence, the committee considered that residential experiences,  
28 university campus visits, coaching, and mentoring by near peers in higher education  
29 could have profoundly beneficial effects on looked-after young people considering  
30 higher education. In addition, the committee agreed that university access schemes

1 (offered by several UK universities) can give important support for looked-after  
2 young people in navigating the application process and receiving assisted entry to  
3 courses.

4 Based on their own experience and knowledge, the committee also weighed up the  
5 potential harm caused by pushing looked-after young people into higher education  
6 when this might not be the best option for them. The evidence did not report whether  
7 looked-after young people enrolled in college or higher education thrived or  
8 completed their courses. But this is a concern that applies to all young people not  
9 just those who are looked-after.

10 Based on their own experience and knowledge, the committee agreed that support  
11 was also important for looked-after young people considering other routes into  
12 further education and training. The committee deemed careers support and advice,  
13 work experience placements, and internships to be useful and available routes into  
14 good careers for looked-after young people. Careers support and advice was  
15 strongly needed, targeted at looked-after young people because they need an extra  
16 level of support and signposting.

### 17 **How the recommendations might affect practice**

18 The resource impact of these recommendations to help looked-after young people  
19 enter higher or further education or training is expected to be low, although some  
20 apparently low-cost interventions funded by local authorities, such as volunteer  
21 coaching programmes, are likely to be associated with expenses for travel,  
22 management and administration. But the resource impact generally is expected to be  
23 small compared with the potential benefits of improved education, employability, and  
24 independence. In addition, there is a possibility that the UK pupil premium grant may  
25 be extended to 16- and 17-year olds in the near future.

26 It is not possible to make a robust judgement about the potential resource impact to  
27 local authorities of recommendations on university access schemes, residential  
28 experience and visits on university campus, mentoring by near peers in higher  
29 education, and coaching, because uptake is too uncertain to predict. Interventions  
30 such as residential experiences and campus visits would be delivered by universities  
31 and colleges themselves, although facilitated by the virtual school. Likewise, some

1 interventions may simply involve signposting people to local programmes and  
2 schemes that are university, college or third sector funded, so the resource impact  
3 for local authorities would be low.

4 [Return to recommendations](#)

## 5 **Before transition between care placements and to permanent** 6 **placements**

7 [Recommendations 1.7.1 to 1.7.9](#)

### 8 **Why the committee made the recommendations**

9 Drawing from UK-based evidence from interview and focus group studies indicating  
10 it was important to have a good match between carers and the looked-after children  
11 and young people, the committee recommended that careful consideration in  
12 transition planning should be given to matching of carers and the looked-after child.  
13 In assessing the strengths of the carers, committee members described how they  
14 translate the child's needs into what the parenting challenge and task looks like for  
15 the carers, and how the carers can best bolster the placement and help meet these  
16 needs.

17 UK-based evidence from interview and focus group studies and expert testimony  
18 also highlighted how the relationship between foster carer and adopter could support  
19 the move into permanency. Good communication and support can improve this  
20 relationship, for example by helping to manage expectations of the foster carer  
21 during the planning stage. These measures could help to avoid an adversarial  
22 relationship forming between carers, rather than a supportive relationship that allows  
23 for a more integrated experience for the looked-after child or young person during  
24 transition.

25 The committee disagreed with perspectives in some of the interview and focus  
26 group-based evidence that suggested it was beneficial for the looked-after child to  
27 experience the short sharp shock of a foster carer stepping away completely and  
28 immediately. Rather, they supported a less traumatic approach that facilitated  
29 ongoing communication with current carers if the child or young person wanted this.

1 The committee looked at interview and focus group-based evidence on facilitating  
2 the involvement of the new permanent or long-term carer's extended family. For  
3 example, the extended family may help by providing support care. The committee  
4 agreed that involving family and friends early in the placement was particularly  
5 important for helping them to engage with the new family relationship. But they  
6 stated that respite support in the early stages could damage the formation of  
7 attachment with the primary carer. Based on their own knowledge and expert  
8 testimony the committee noted that family and friends training days, which are  
9 offered through adoption agencies in some local authorities, were helpful.

10 For birth families involved in substance misuse, the committee considered evidence  
11 on 2 interventions to support reunification: recovery coaching and family drug and  
12 alcohol courts. This included evidence based on robust study designs, and some  
13 weaker forms of evidence (not from randomised controlled trials). Recovery coaching  
14 was associated with greater reunification and more stable and long-lasting  
15 relationships than services as usual. UK family drug and alcohol courts were  
16 associated with improvements in reunification and longevity of reunification  
17 compared with ordinary care proceedings. The committee considered that providing  
18 independent support for families at the same time as child welfare court processes  
19 could support reunification. They agreed that, if reunification had occurred, support  
20 needed to continue after reunification to help the permanent placement to last, with  
21 clear plans for follow up. Instead of recommending recovery coaching specifically,  
22 the committee recommended substance and alcohol misuse support, by trained  
23 staff, with a cross referral to NICE lifestyle and wellbeing guidance (which includes  
24 managing substance and alcohol addiction, and behaviour change).

25 The committee noted that there is evidence for the use of drug and alcohol courts to  
26 aid reunification by intervening and providing support for birth parents who have drug  
27 addiction. However, rates of mental health problems are also high among birth  
28 parents who have had a child removed, and these problems may also contribute to  
29 the reasons for children going into care. Based on their own experience, the  
30 committee also recommended that mental health support continues alongside court  
31 processes. The committee made [research recommendation 5](#) about the benefit of  
32 mental health support to promote reunification.

1 There was evidence, based on studies with non-randomised designs as well as  
2 focus group and interview-based studies, that concurrent planning significantly  
3 reduced the likelihood of multiple moves before finding permanency and the time to  
4 finding a permanent placement. But evidence also showed 2 particular issues with it.  
5 One was that prospective adopters and birth parents found that late changes in the  
6 care plan could be particularly distressing for them. And prospective adoptive  
7 parents found that the intensive contact arrangements could be taxing for both  
8 themselves and the child (in terms of frequency and distance travelled while  
9 establishing new routines and building relationships).

10 The committee discussed concurrent planning as something that was already  
11 practiced, with success, in certain parts of the UK. However, they considered that  
12 carers and birth parents should be well informed of the inherent difficulties of such a  
13 strategy and the possibility of late changes to the care plan meaning that adoption or  
14 reunification may not occur as anticipated.

### 15 **How the recommendations might affect practice**

16 It is not possible to make a robust judgement about the potential resource impact of  
17 setting up concurrent planning processes to speed up transition time to permanency,  
18 or of carrying out substance and alcohol misuse support alongside court processes,  
19 because uptake is too uncertain to predict. However, these processes are already  
20 available in some parts of the UK.

21 Some local authorities already offer 'family and friends' training days through  
22 adoption agencies, and there is existing provision for this training, so it is unlikely  
23 that extending this to all areas will have large resource implications.

24 [Return to recommendations](#)

### 25 **During transition between care placements and to permanent** 26 **placements**

27 [Recommendations 1.7.10 to 1.7.18](#)

1 **Why the committee made the recommendations**

2 UK-based evidence from interview and focus group studies suggested the need for a  
3 more integrated experience for looked-after children and young people that takes  
4 into account the significance of previous caregiving relationships. For example, the  
5 importance of foster carers for preparing and supporting adoptive parents, focus on  
6 the emotional state of the child during the busy transition out of care, and  
7 prospective adoptive carers wanting more information about previous care  
8 experiences and health.

9 The committee agreed that, beyond the benefits for prospective adopters offered by  
10 foster carers in terms of sharing information, it was also beneficial for the looked-  
11 after child or young person to see positive relationships forming between their  
12 current carers and their prospective permanent carers in the period before and after  
13 transition.

14 Based on their own experience and knowledge, and as part of the more integrated  
15 experience of transition described above, the committee considered the social  
16 network around the looked-after child or young person. They thought that contact  
17 arrangements, which may be focused on the birth family, should also take into  
18 account whether the looked-after person has other significant relationships with  
19 which they would like support to maintain. Such support could help create a more  
20 overlapping transition that gives more time for new connections to form and to  
21 process the loss of old ones.

22 Based on interview and focus group evidence about how child-focused the transition  
23 period was, the committee agreed it was important to have a practitioner regularly  
24 'check in' with the child to ensure the transition process was going well for them and  
25 to keep the process child-centred. The committee noted that for children not yet able  
26 to talk the primary carer may need to be present and advocacy services may also be  
27 needed.

28 UK-based evidence from interview and focus group studies showed that good clear  
29 information before transition was extremely important to new foster carers and  
30 prospective adopters. The committee considered the types of information that should  
31 be given to a new carer during the process of transition between care placements or

1 out of care, based on their own knowledge and expertise. It was important that this  
2 should give new carers a clear sense of the chronology of the care process for the  
3 child.

4 To avoid the information being handed over in an overwhelming quantity, the  
5 committee agreed that the information needs to include a clear summary and index.  
6 They also agreed the importance of briefing the new carer in person, rather than  
7 leaving the carer to make sense of the information by themselves. A social care  
8 practitioner who has had continuous oversight of the child or young person's history  
9 in care would be ideally placed to do this.

10 The committee considered their own experience and knowledge and some interview  
11 and focus group-based evidence showing the concerns of new carers adopting  
12 looked-after children with medical conditions they were not familiar with, and of the  
13 need for information about previous placements. The committee discussed what  
14 information would be helpful for new carers and prospective adopters, to cover the  
15 needs of the new placement, including personal health history. It also included birth  
16 family health history; the committee were keen that this was collected for all children  
17 entering care, not just during adoption processes. The committee agreed it should  
18 also cover behaviour with the potential for significant harm to others (for example  
19 sexual, violent, or firesetting). However, they highlighted it was important for  
20 prospective carers to have the context to these events so they could assess them  
21 properly.

22 Based on their experience and knowledge, the committee also stated that this  
23 information giving should not simply be a record of negative life events, but that the  
24 record should lend equal weight to factors that could support the success of the  
25 placement. These include the looked-after child or young person's strengths, hopes  
26 for the future, significant positive relationships (peer and adults), interests and  
27 activities. The committee recognised the importance of ongoing life story work to  
28 draw out these factors.

29 There was lot of UK-based evidence from interview and focus group studies showing  
30 that children and carers value continuity of care practitioners. The committee agreed  
31 that consistency in the practitioners who help in the handover of information for new

1 permanent carers could reduce the sense of instability during transition, and support  
2 positive relationships.

3 Based on expert testimony and their own knowledge, the committee discussed the  
4 problem of a continuing education plan when a child is moved outside their local  
5 authority area. The committee considered the need for someone who has an  
6 overview of the child's educational needs and can help place the child in education  
7 that matches their needs. They agreed that this could be assisted by having a  
8 transition plan and 'handover' from the old to the new school placement (for example  
9 from one designated teacher to another) as part of the personal education plan.

10 Based on their experience and knowledge, the committee also discussed the need  
11 for continuity of healthcare as the looked-after child or young person moves to their  
12 new placement. The committee agreed that if regular mental health, physical health,  
13 or dental support had been provided in the old placement, new referrals local to the  
14 new placement need to be in place before the transition to promote continuity of  
15 care.

16 Expert testimony from an adoptive parent and organisations representing adopters  
17 highlighted the importance of language during the transition period. In particular,  
18 adoptive parents (who may have no experience of parenting) may feel judged by the  
19 child's foster carers. Often, adopters feel this is a highly sensitive time when they do  
20 not want to complain or do anything to jeopardise the placement. The committee  
21 therefore highlighted the need for transition teams and foster carers to consider  
22 these issues and adjust language accordingly.

### 23 **How the recommendations might affect practice**

24 Most recommendations were not particularly resource intensive, generally focusing  
25 on continuity of healthcare and education, parent and carer training, peer support,  
26 and the detailed chronology of care process for the individual. Many  
27 recommendations focus on ensuring continuity of existing processes, or on  
28 processes that are already in place in some areas.

1 However, extra resources may be needed for those that need more professional time  
2 to produce (such as the indexed and summarised history of care processes) or  
3 training and preparation for long-term carers.

4 Giving opportunities for current and new carers to meet before a placement move,  
5 and facilitating ongoing communication should not have substantial resource  
6 implications because these can be incorporated into existing transition planning.  
7 Similarly, supporting existing social networks allowing time in the transition period for  
8 the looked-after child or young person to form new social connections is not  
9 expected to be resource intensive because this can be incorporated into existing  
10 transition planning.

11 [Return to recommendations](#)

## 12 **After transition between care placements and to permanent** 13 **placements**

14 [Recommendations 1.7.19 to 1.7.23](#)

### 15 **Why the committee made the recommendations**

16 The committee also considered whether it would be useful for the looked-after child  
17 or young person to give their own perspective on their journey in care to their  
18 prospective carer if the child or young person is willing, drawing from existing life  
19 story work. This could aid transparency and help the looked-after person feel in  
20 control of their information. However, the committee considered that this may be  
21 better occurring once the looked-after person and carer have begun to develop a  
22 stronger attachment relationship.

23 UK-based evidence from interview and focus group studies and expert testimony  
24 highlighted the power imbalance perceived by adoptive parents, who may feel  
25 unable to complain about the transition process because of fears about jeopardising  
26 the placement. The committee considered that although there was little that could be  
27 done about this during the transition period (other than making permanency carers  
28 aware of their rights to receive support), agencies would benefit from seeking  
29 feedback from foster carers and adopters after the permanence order is made, and  
30 could use this to improve the delivery of transition services.

1 There was very good UK-based interview and focus group evidence, supported by  
2 expert testimony, that peer support was useful for adopters and permanent carers.  
3 Peer support groups could often give the personalised support and availability that  
4 social care teams could not. The committee noted that effective peer support could  
5 be achieved in a variety of ways.

6 The committee noted, based on expert testimony, that there was also the potential  
7 for specialised peer support groups to help deal with specific problems in  
8 permanency placements. Experienced permanent carers could be linked up with  
9 other permanent carers in need of support to provide tailored advice and empathy  
10 that may not be covered by the expertise of the support team.

11 The committee noted that few studies reported long-term placement durability  
12 outcomes, including post-permanency outcomes showing that the looked-after child  
13 or young person was thriving in their new long-term placement. In addition, there  
14 was insufficient evidence on the perspective of adopters and long-term permanency  
15 carers about the transition out of care and how this could be improved. The  
16 committee therefore made [research recommendation 2](#) to encourage more evidence  
17 in these areas.

## 18 **How the recommendations might affect practice**

19 Facilitating accessible peer support for permanent carers (such as adopters) is  
20 unlikely to have a substantial impact on resources, because most would be peer led  
21 and not need much additional personnel time or physical resources from the local  
22 authority. Message boards may need to be moderated to prevent misinformation,  
23 but, overall, peer support could save time and resources by helping to resolve issues  
24 that would otherwise need the attention of care staff, or that, if left without support,  
25 could lead to placement instability.

26 [Return to recommendations](#)

## 27 **Transition out of care to independence**

28 [Recommendations 1.8.1 to 1.8.10](#)

## 1 **Why the committee made the recommendations**

### 2 **Needs assessment for transition out of care**

3 A needs assessment is already a requirement in pathway planning (beginning at age  
4 15 and completed before age 16). But based on evidence from UK interview and  
5 focus group studies reflecting the unmet need of some care leavers after leaving  
6 care, the committee agreed that this process needed to be more rigorous and  
7 incorporate previous life story work to identify the person's strengths (for example  
8 problem-solving skills and practical skills) and needs.

9 The committee found that overall, evidence from studies with robust designs did not  
10 suggest that independent living services were ineffective. In the 1 study that looked  
11 at providing independent living services that were better than standard care, there  
12 were significant improvements across earnings, housing stability, and general  
13 economic security. There was also some evidence of benefit for various specific  
14 aftercare services from evidence based on studies with weaker designs (not  
15 randomised controlled trials).

16 The committee therefore discussed the descriptions of the independent living  
17 services in the studies and recommended some core principles of care for  
18 supporting looked-after young people moving into independence. The committee  
19 sought to link the needs assessment for care leavers to the services provided in the  
20 transition out of care to independence.

21 UK-based evidence based on interview and focus group studies highlighted how  
22 care leavers are often lost in the gap between child and adult health services and  
23 that they often face a great amount of loneliness and mental strain. This matched the  
24 committee's own knowledge and experience. So they agreed that the care leaver's  
25 existing mental health, health, and dental care needed to be supported by ensuring  
26 registration with GP services and dental services. In addition, the committee  
27 suggested ways of plugging the gap between adult and child services until the  
28 transfer to adult services can be completed, for example extension of access to  
29 CAMHS or providing alternative emotional and wellbeing services such as online  
30 support, face-to-face counselling or group work.

1 The committee noted that independent living services described in the evidence  
2 reviewed covered several interventions that had components supporting mental  
3 health. However, few reported mental health or general health-specific outcomes.  
4 Recognising the higher than usual rates of mental illness and health problems  
5 among care leavers, the committee recommended that more research was needed  
6 on interventions to promote the health and mental health of care leavers (see the  
7 [research recommendation on continuing support for the physical and mental health](#)  
8 [needs of care leavers](#)).

9 UK-based evidence drawing from interview and focus group studies strongly  
10 suggested the benefit of peer groups and support for gaps in social network in  
11 helping to combat social isolation. The committee noted that peer support was also a  
12 common component of independent living services described in the rest of the  
13 reviewed evidence.

14 Evidence showed the usefulness of and need for various common components of  
15 independent living services. For example, ongoing accommodation support is a  
16 common component of independent living services and valued by care leavers. The  
17 committee agreed that it was important and emphasised that organising this through  
18 the leaving care team working together with other housing services would promote  
19 continuity of oversight during the transition out of care.

20 The committee discussed interview and focus group evidence about the experience  
21 of the short sharp shock of independence, and that care leavers were not 'allowed' to  
22 make mistakes. For example, care leavers may initially reject support but then regret  
23 it. The committee therefore agreed that services that help to provide safety netting  
24 should be available for all care leavers to help prevent deterioration in housing  
25 stability, connectedness, and economic independence. Based on their experience  
26 and knowledge, they suggested that the following services could be provided for  
27 care leavers without substantial cost to local authorities: drop-in services (for local  
28 guidance and signposting), possibility of more frequent meetings with their personal  
29 adviser (for individualised guidance and support) and facilitated care leavers peer  
30 support groups (to support relationships after care, mentoring, and share ideas and  
31 resources).

## 1 **Plans and support for care leavers**

2 Based on their knowledge and experience, the committee discussed that many of  
3 the problems young people encounter when transitioning out of care stem from a  
4 lack of accountability of local authorities in following and communicating statutory  
5 guidance. Care leavers may be unaware of the importance of the pathway plan for  
6 agreeing the support they will be given after transition.

7 Some examples the committee discussed included informing care leavers that if  
8 something is in their pathway plan and is signed, it constitutes an agreement that the  
9 local authority will provide that service, and that care leavers do not have to sign  
10 their pathway plan until they are happy with it and may request a review. The  
11 committee agreed the need for practitioners communicate this.

12 The committee also agreed that other aspects that need to be communicated  
13 included rights to extended support beyond age 18, and rights to advocacy services  
14 to improve adherence to statutory requirements, and to take full advantage of rights  
15 under statutory law.

16 The committee discussed the need for local authorities to perform some quality  
17 assessment of the pathway plans. Based on their experience and knowledge, they  
18 discussed what made a better-quality pathway plan and agreed there was a need for  
19 plans to include actions in response to identified need. These actions should clearly  
20 identify a timeframe for completion as well as the practitioner responsible for  
21 completing the action. The committee also discussed the need for quality  
22 assessments to check that the actions were actually completed in the agreed  
23 timeframe.

24 From the committee's experience, the support available to care leavers is likely to  
25 differ considerably by area. So they agreed that efforts to raise care leavers'  
26 awareness of local opportunities for support in independent living were needed.

## 27 **How the recommendations might affect practice**

28 These recommendations should not have substantial additional resource  
29 implications because most of them cover care processes that are statutory across  
30 the UK, although they are completed with variable quality. For example, many of the

1 possible interventions for preparing care leavers for independent living are currently  
2 available across the UK, but with variable access.

3 Some of the recommended interventions to support care leavers may have resource  
4 implications, such as supported housing and increased mental health support to plug  
5 the gap between child and adult services. However, the provision of these is already  
6 a statutory requirement if based on a good individual needs assessment.

7 Providing 'safety nets' such as drop-in services for care leavers and peer support  
8 groups is expected to be relatively low cost and has large benefits by providing a  
9 sense of availability and connectedness. Peer support groups may need  
10 administrative staff time, especially, to help organise and facilitate meetings, and  
11 some monitoring may also be necessary to help prevent misinformation spreading.  
12 However, this intervention could save time and resources by helping to resolve  
13 issues that would otherwise need the attention of transition teams.

14 [Return to recommendations](#)

## 15 **Support for care leavers in further and higher education**

16 [Recommendations 1.8.11 to 1.8.13](#)

### 17 **Why the committee made the recommendations**

18 Based on their own experience and knowledge, the committee discussed extended  
19 educational care. They noted that for qualifying care leavers, extended support was  
20 often offered if the person was in full time education. However, the definition of what  
21 constitutes full time education may be too narrow for many who would benefit from it.  
22 For example, one of the committee members raised the example of a care leaver  
23 who received a scholarship to train with a sports team, who may not receive the  
24 same extended support as someone in university. The committee also considered  
25 the high prevalence of those with special educational needs or disabilities among  
26 care leavers. Because this group may not progress as quickly in education the  
27 committee agreed that they, especially, may be in need extended educational  
28 support.

1 Based on their own experience and knowledge, the committee also discussed the  
2 issue of university students living away from home and agreed that continuity of  
3 housing during holidays was needed for care leavers in college or university to  
4 prevent housing instability between terms. This was supported by evidence showing  
5 that housing was often cited as the reason for care leavers dropping out of courses  
6 in higher and further education.

7 Based on their experience and knowledge, and evidence showing that isolation may  
8 remain a problem even with appropriate housing, the committee agreed that a good  
9 level of social support was needed from social care and university teams. Based on  
10 evidence showing the benefit of peer support and mentoring interventions the  
11 committee agreed facilitating 'buddying system' for peer support, or mentoring from  
12 older students on campus to tackle isolation during the holidays, or providing other  
13 social opportunities for care leavers could be beneficial.

#### 14 **How the recommendations might affect practice**

15 Housing support during university holidays may not cost a substantial amount  
16 because many universities already offer the option for care leavers to stay on in their  
17 halls of residence in holiday times if they have no home to return to.

18 [Return to recommendations](#)

#### 19 **Extended care**

20 [Recommendations 1.8.14 to 1.8.15](#)

#### 21 **Why the committee made the recommendations**

22 The committee considered evidence from a study, using less robust research  
23 designs (not randomised controlled trials), describing outcomes of participants who  
24 had left care at different ages. Those who were still in care placements between the  
25 ages of 17 and 23 were less likely to be involved in property crimes (men) or  
26 convicted or arrested (women). Those who had left care aged 18 or 19 had worse  
27 outcomes for time to arrest and time to first violent offense.

28 Other UK-based evidence from interview and focus group studies suggested that  
29 many care leavers experienced what felt like a cliff edge moving into independence

1 too early. Therefore, the committee recommended that wherever possible looked-  
2 after people approaching independence should be encouraged and assisted to stay  
3 in their current care placement until at least the age of 18.

4 The committee noted that for some, staying put in their care placements beyond age  
5 18 could be beneficial. However, this was complicated by the fact that carers may be  
6 paid less. (Levels of financial support to former foster carers are agreed and  
7 specified within each local authority's staying put policy.) In addition, the ability to  
8 take on other foster placements may be compromised by allowing an adult who has  
9 left care to stay on the premises. Therefore, the committee agreed that the possibility  
10 for staying put should be explored with all carers before leaving care, even though  
11 may not be possible in many cases.

12 Supported by expert testimony, and experience in the committee, the committee  
13 considered the danger faced by those whose care placement broke down between  
14 the ages of 16 and 17. This may lead to placement in unregulated housing at a  
15 young age, when vulnerability and the risk of exploitation may be high. The  
16 committee agreed that it was important to avoid using unregulated housing if  
17 possible, particularly among those at high risk of exploitation.

## 18 **How the recommendations might affect practice**

19 Supporting young people staying in their current placement until at least the age of  
20 18, and avoiding the use of unregulated housing in the case of placement  
21 breakdowns, is not expected to have significant resource implications. This is  
22 because such late stage placement breakdowns will only apply to a small number of  
23 care leavers.

24 If a foster carer is happy to continue the placement beyond 18, the cost of this (for  
25 example, the potential loss of the foster carer to the system) is offset by the benefits  
26 of improved outcomes for those who have support for longer beyond their in-care  
27 placement.

28 [Return to recommendations](#)

## 1 **Feedback to improve services**

### 2 [Recommendation 1.8.16](#)

## 3 **Why the committee made the recommendation**

4 Drawing on UK-based evidence from interview and focus group studies suggesting  
5 that shared decision making should be a cornerstone of care provided for looked-  
6 after children and youth, the committee discussed the need for a mechanism to  
7 incorporate the feedback of care leavers moving into independence back into the  
8 services provided. Interview and focus group evidence suggested that children in  
9 care councils specifically may facilitate such feedback, although a council more  
10 focused on care leavers was needed to improve services during the transition into  
11 independence.

## 12 **How the recommendation might affect practice**

13 This recommendation is not expected to have substantial resource costs, as care  
14 leavers may be encouraged to give feedback in numerous ways. Care leaver  
15 councils may have more running costs in terms of facilitation and organisation, but  
16 the extent to which local authorities will use these councils is uncertain.

### 17 [Return to recommendations](#)

## 18 **Forum for strategic leadership and best practice**

### 19 [Recommendations 1.9.1 to 1.9.2](#)

## 20 **Why the committee made the recommendations**

21 Based on evidence from interview and focus groups studies and studies with more  
22 robust study designs, and committee experience and knowledge, the committee  
23 considered the benefit of facilitated multiagency working to help systems adapt to  
24 local challenges. They were particularly interested in the use of regular broad-system  
25 meetings, or forums, for care providers to exchange information and to provide the  
26 opportunity to adapt care systems to meet the needs of looked-after children.

27 The committee considered that one of the key components was improving  
28 communication between disciplines (for example health professionals, social care  
29 providers, and carers) to ensure that statutory guidance was being adhered to. A

1 forum could also display examples of exemplary practice, review recently published  
2 evidence, and align tools used for health and social care assessments. This would  
3 help educate leaders, which would enable information to be cascaded down to other  
4 professionals. Based on expert testimony, the committee also agreed that these  
5 meetings would help standardise the different agencies' use of language, risk-  
6 assessment tools, and job titles and roles. The committee agreed that such forums  
7 could adapt to situations specific to the local authority, for example, increasing  
8 numbers of unaccompanied asylum seekers or increasing risks of going missing in  
9 care. The committee agreed that risk-assessment tools were useful to determine  
10 increased risk of exploitation at the individual level (for example, someone placed out  
11 of area is at increased risk), but it needed to be standardised across local authorities  
12 and agencies.

### 13 **How the recommendations might affect practice**

14 There may be organisation and facilitation costs for starting a forum to bring together  
15 agencies and representatives providing care for looked-after children and young  
16 people within a local authority. However, these are justified by the benefits of  
17 facilitating communication between agencies, providing education, sharing tools and  
18 expertise, and giving examples of best practice. Virtual forums may also help to bring  
19 costs down.

20 The committee noted that, in many cases, various boards, groups, and councils  
21 already exist within local authorities. Partnerships with these could be organised to  
22 bring leaders together from several sectors. Some examples of existing relevant  
23 boards, groups and councils include: corporate parenting boards; children's  
24 safeguarding boards; children's trust boards; health and wellbeing boards; children's  
25 care councils; youth councils; foster care liaison groups; and clinical commissioning  
26 groups.

27 [Return to recommendations](#)
