

Tobacco: preventing uptake, promoting quitting and treating dependence (update)

**Consultation on draft guideline - Stakeholder comments table**  
**25 June to 6 August 2021**

Stakeholder	Document	Page No	Line No	Comments	Developer's response
Action on Smoking and Health	Guideline	General	General	<p>The guidelines, quite rightly, make a range of recommendations for research (see page 72-76). Yet there is only one acknowledgement of the need to take into account the outcomes of any such research, in section 1.9.2 bullet 2 which recommends "Use the best available evidence of effectiveness, such as Cochrane reviews".</p> <p>To our knowledge some, if not all, of the research recommendations are already being taken forward. For example, NIHR has funded 'Helping Pregnant Smokers Quit: A Multi-Centre RCT of Electronic Cigarette and Nicotine Patches'. Unfortunately, this important research won't be published in time to be taken into account in the guidelines, but it will be included in a Cochrane living systematic review of the evidence on electronic cigarettes for smoking cessation. NIHR is also funding research on smoking cessation in underserved groups such as prisoners and the homeless.</p> <p>The evidence continues to develop and evolve, and it is important therefore that in the overview section of the guidelines there is a generic recommendation that research outcomes are taken into account when</p>	<p>Thank you for your comment. The research recommendations developed by PHAC seek to address the gaps in the evidence identified during the guideline development process with the hope of stimulating research in these areas for consideration when this guideline or aspects of this guideline are considered for update.</p> <p>NICE routinely checks that published guidelines are current, accurate and up to date via our surveillance function which explores if there is any new evidence to contradict, reinforce or clarify guideline recommendations. Surveillance also identifies new interventions that may need to be considered within a guideline and explores changes in context that may mean modifications are needed, for example, changes in policy, infrastructure, legislation or costs. A proactive approach is taken that includes reacting to events at any time after guideline publication (for example, publication of a key study)..</p> <p>Thank you for the Greater Manchester Health and Social Care Partnership reference. We will pass this information to our local practice collection team. More information on local practice can be found here</p>

				implementing any of the recommendations in the guidance. For example, Greater Manchester Health and Social Care Partnership are currently awaiting publication of a RCT evaluating at the impact of providing incentives for 1-year post-partum. We suggest wording along the lines: "When developing and implementing policies to prevent uptake, promote quitting and treat dependence it is essential to use the best available evidence of effectiveness, such as Cochrane reviews.	<a href="https://www.nice.org.uk/about/what-we-do/into-practice/shared-learning-case-studies">https://www.nice.org.uk/about/what-we-do/into-practice/shared-learning-case-studies</a>
Action on Smoking and Health	Guideline	General	General	"Recommendations for research" (p.72-76) does not include any recommendations for population level policy interventions, such as smokefree outdoor places. Extending smokefree outdoor places is high on the list of policy interventions currently under consideration by local authorities, see for example, Greater Manchester and Oxfordshire County Council. However, PHE's 2017 review of Smokefree outdoor public places and outdoor commercial places found that UK evidence is currently limited. The review did find that there is some evidence for positive effects on behaviour and associated harms when outdoor spaces are made smokefree, although in general the evidence for an effect was mixed.	Thank you for your comments. Population level policy interventions are outside the scope of this guideline. Please see the <a href="#">scope document</a> on the NICE website.

*Comments received in the course of consultations carried out by NICE are published in the interests of openness and transparency, and to promote understanding of how recommendations are developed. **25 June to 6 August 2021**

Stakeholder	Document	Page No	Line No	Comments	Developer's response
				<p>The Royal College of Physicians report "Smoking and Health 2021: A coming of age for tobacco control" has the following to say on smokefree outdoor policies; "Evaluation of such policies could include standardised, controlled studies on levels of exposure to ambient tobacco smoke; changes in attitudes for adult smokers, non-smokers and children; and assessing whether these policies have a positive effect. Investment in these policies by local areas should be considered as part of a comprehensive tobacco control strategy".</p> <p>We would suggest therefore that the research question should be framed as follows: 'Smokefree outdoor places: Do Smokefree outdoor policies reduce exposure to ambient tobacco smoke, and do they have a significant impact on attitudes to smoking among adult smokers, non-smokers and children.'</p>	
Action on Smoking and Health	Guideline	General	General	<p>Financial incentives for quitting smoking are not highlighted as an effective intervention in the general population. They should be, as a Cochrane systematic review has concluded that there is high certainty evidence of their effectiveness in the general population of people who smoke (as well as in pregnancy, where they are currently highlighted).<sup>1 2</sup></p>	<p>Thank you for your comment. Incentives were only considered in pregnant women. Incentives for other populations are outside the scope of this guideline. Please see the <a href="#">scope document</a> on the NICE website.</p>

Action on Smoking and Health	Guideline	013	005 - 007	<p>1.6.4 – While it is important to avoid inadvertently making e-cigarettes desirable to young people, it is just as important to avoid inadvertently reinforcing misperceptions that e-cigarettes are as harmful as smoking. Findings from the annual Smokefree GB survey commissioned by ASH show that the perception among 11–18-year-olds that cigarettes and e-cigarettes are equally harmful has increased since 2013. In 2021, only 43.8% of 11–18-year-olds knew that e-cigarettes were less harmful than cigarettes.<sup>3</sup> Similarly, among adults, around a third (32%) believed e-cigarettes were more or equally as harmful as cigarettes in 2021, compared to 42% who thought they were less harmful.<sup>4</sup> This is relevant because adults will be responsible for giving children advice about e-cigarettes.</p> <p>Therefore, an additional sentence should be added to recommendation 1.6.4 consistent with the wording on page 26 lines 1-4, that: "However, it is also important to make clear that although there is not currently enough</p>	Thank you for your comment. This is stated clearly elsewhere in the guideline and the committee were clear that they did not want to say anything that might promote the use of e-cigarettes in under 18s.

				identifying pregnant smokers using exhaled air carbon monoxide: impact on engagement with smoking cessation support. Tobacco control, 26(3), 300-306.	
Action on Smoking and Health	Guideline	030	014	The recommendation to provide support to smokers within 24 hours of admission does not go far enough to ensure patients comfort or ease their distress. The recommendation should require the provision of support within 30 minutes of arrival to hospital. For example, SLAM NHS Foundation Trust provide 'Tea and NRT' to smokers on arrival to hospital as an over the counter medication. This avoids the delays caused by getting a prescriber and is hugely beneficial since the half-life of nicotine is approximately 2 hours and longer delays will result in unnecessary discomfort.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
Action on Smoking and Health	Guideline	032	004 - 009	1.14.20 - We welcome the recommendation to tell smokers about the different types of medicinally licensed nicotine containing products, how to use them and if possible, prescribe them. However, we are disappointed that e-cigarettes are not also recommended as a vital intervention for smokers who need to temporarily abstain. Failure to include e-cigarettes as a safe, valid and effective way to support temporary abstinence may discourage service providers from allowing the use of e-cigarettes for temporary abstinence, thus	Thank you for your comment. The evidence on the use of nicotine containing e-cigarettes to support temporary abstinence was not reviewed as part of this guideline update and therefore recommendations have not been made in this area. Regarding differing needs between people admitted to acute hospital settings and to mental health settings, these recommendations are greyed out as they are outside the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.

				<p>losing a teachable moment to support stopping smoking and switching to an e-cigarette for those smokers for whom NRT is not effective.</p> <p>SLaM NHS Foundation Trust provide mental health care services from 4 large London based hospitals (50 wards). Typically, about half of adult patients admitted to hospital are current smokers, and it is rare to find a smoker at the point of admission who decides to make a quit attempt. For the overwhelming majority (95%) their decision at the point of admission is to use whatever support is available to temporarily abstain. Currently, the preferred option to support temporary abstinence for SLaM is an e-cigarette, because smokers feel that this more closely matches the experience of smoking compared with using NRT products. SLaM have used e-cigarettes in this way since 2012 and typically provide around 400 free e-cigarette starter packs each month. In about 30% of cases the smokers find that the provision of a free e-cigarette starter pack, given with the intention to support temporary abstinence on admission is so effective that they decide to continue using it, and do not return to smoking.</p>

				Incentives for smoking cessation (Review). Cochrane Database of Systematic Reviews. 2019. Issue 7. Art. No.: CD004307	
Action on Smoking and Health	Guideline	051	005	Research is underway on the effectiveness of e-cigarettes as a quitting aid for pregnant smokers and the impact of their use on birth outcomes,13 but will not be published in time to be taken into account in this guidance. Despite the lack of evidence specific to pregnancy at the current time, advice on the use of e-cigarettes in pregnancy should not be excluded from the guidance. E-cigarettes are already being used by some women as an aid to quit smoking during pregnancy, and midwifery and stop smoking practitioners are being asked for advice on their use. If they are unable to provide any advice, there is an increased risk that women may revert to smoking, which is a leading modifiable risk factor for many poor birth outcomes. That is why the Smoking in Pregnancy Challenge Group, an alliance of medical organisations such as the RCOG, RCM and RCGP, working together with charities such as the Lullaby Trust, Sands and Tommys, has produced peer reviewed resources for healthcare professionals and pregnant women on use of e-cigarettes.14 These resources are widely	Thank you. The committee did not see any evidence on the effectiveness of nicotine containing e-cigarettes during pregnancy and therefore is unable to make a recommendation in this area.

				<p>and Training (NCSCT) on behalf of the Department of Health and includes all behaviour change techniques (BCTs) for which there is evidence of effectiveness. It does not prevent tailoring support and treatment as appropriate, therefore the rationale for deletion is not justified. Practitioners trained to deliver interventions according to the standard have been proven to be effective in adding significant value to quit attempts.<sup>21</sup> Removal of the Training Standard is likely to lead to a return to the situation prior to the establishment of the NCSCT where people provided training based on opinion, rather than the evidence, for what effective training should contain. This recommendation should therefore be reinstated.</p> <p>Related to this point, the National Training Standard is mentioned in 1.12 (in a rather non-specific manner) and again under Quitlines (1.12.20). However, section 1.23, line 12-26, 'Those who advise people to stop smoking' fails to include any mention of the Standard. While the subtitle may suggest this section is specific to those who identify smokers and prompt quit attempts (i.e. deliver VBA), there is nothing further in this section on training for those who deliver ongoing stop smoking</p>

				<p>support (i.e. behavioural support), as has been the case in previous versions of the document. At minimum this should be included for stop smoking services. The wording found in the 2018 NG92 recommendation on this subject served this purpose. The key being 1) stop smoking support is provided by trained staff and 2) that training be consistent with the National Training Standard. Given the level of depth the document goes into for maternity care and closed institutions, there should be at least the equivalent depth provided for all settings (stop smoking services, maternity care, closed institutions, primary care) who are delivering stop smoking support. This should consist of the National Training Standard as default, plus additional training for those working with specific population such as mental health and pregnancy.</p> <p>Overall, there is little said in the new NICE guidance on stop smoking services and stop smoking support delivered in other settings compared to previous guidance documents. There is also a level of specificity in some sections that is not consistently applied in the document (e.g. lots of detail in maternity care section and smokeless tobacco and only a few bullets on other important areas of practice).</p>

				This risks making the document less clear and less user friendly than previous NICE guidance. 21 Brose L, West R, Michie S, McEwen A. Changes in success rates of smoking cessation treatment associated with take up of a national evidence-based training programme. Preventive Medicine 2014;69C:1-4	
Action on Smoking and Health	Guideline	075	007 - 013	We suggest considering the addition of two further points regarding recommendations for further research into relapse prevention. Firstly, we see a clear need for more research on varenicline for relapse prevention, given the committee acknowledges its likelihood of increasing long-term abstinence and supporting Cochrane evidence. <sup>22</sup> Secondly, we suggest it would be a good idea to recommend more trials looking at relapse prevention interventions delivered to people who have been abstinent for 4+ weeks, as there is little evidence in this group. The committee's emphasis on the importance and paucity of this kind of longer-term evidence is reflected in evidence review N: "For this reason, the committee focussed on evidence where relapse was clearly additional to cessation and delivered at a later point (this included behavioural interventions for assisted	Thank you. Research recommendations in NICE guidelines are specifically to address gaps in the research that the committee considered while making their recommendations. They do not address general gaps in the evidence.

				<p>abstainers [Figure 11, GRADE profile 5], and pharmacotherapy for assisted abstainers [Figure 13-16, GRADE profile 6]). There is a paucity of evidence on this type of longer term relapse prevention." (p.66 of evidence review N)</p> <p>22 Livingstone-Banks J, Norris E, Hartmann-Boyce J, West R, Jarvis M, Chubb E, Hajek P. Relapse prevention interventions for smoking cessation. Cochrane Database of Systematic Reviews 2019, Issue 10. Art. No.: CD003999</p>	
Action on Smoking and Health	Guideline	078	027 - 029	<p>This states that nicotine e-cigarettes are of similar effectiveness to NRT. There is moderate certainty evidence that they are more effective than NRT (including in studies where participants are offered combined short and long-acting NRT) and this should be made clear.<sup>23</sup></p> <p>23 Hartmann-Boyce J, McRobbie H, Butler AR, Lindson N, Bullen C, Begh R, Theodoulou A, Notley C, Rigotti NA, Turner T, Fanshawe TR, Hajek P. Electronic cigarettes for smoking cessation. Cochrane Database of Systematic Reviews 2021, Issue 4. Art. No.: CD010216</p>	<p>Thank you. The pairwise meta-analysis found a pooled risk ratio of 1.47 (1.25 – 1.72) for nicotine e-cigs vs single NRT for abstinence at 3 months. The network meta-analysis uses the effectiveness data and NMA models from Thomas' (2020) review as well as results of NICE-conducted rerun searches. This NMA (based on 192 studies) showed no significant effect of e-cigarettes compared to NRT (RR of 1.23 [CrI: 0.73, 1.95]) or long + short NRT (RR: 0.84 [CrI 0.48, 1.40]). The discrepancy between pairwise and NMA effect estimates is likely to be due to the modifying effect of indirect treatment estimates within the network. Consistency checking did not identify any concerns with the model that was used for the NMA and the committee</p>

					focussed their discussion on the results of this NMA.
Action on Smoking and Health	Guideline	079	008 - 013	<p>This section states the committee had low confidence in the finding of no difference in adverse events in people using nicotine e-cigarettes compared to NRT, e-cigarettes without nicotine, and no treatment, because the studies were powered to investigate effectiveness and not adverse events. Though this is an issue for serious adverse events, where events are rare, for non-serious adverse events, which this section appears to refer to at first glance, this is not an issue of underpowering because non-serious adverse events are more common than cessation (a study powered to detect a difference in cessation would also be powered to detect a difference in adverse events). If this section is on serious adverse events, it should be clarified that that is the case. If not, it should be reworded. The latest Cochrane review has moderate certainty evidence of no difference in rates of adverse events (non-serious) between nicotine and non-nicotine e-cigarettes. <b>Error! Bookmark not defined.</b></p> <p>23 Hartmann-Boyce J, McRobbie H, Butler AR, Lindson N, Bullen C, Begh R, Theodoulou A, Notley C, Rigotti NA, Turner T, Fanshawe TR, Hajek P. Electronic</p>	<p>Thank you. Details of the adverse events reported are contained in evidence review K and are adverse events rather than serious adverse events.</p> <p>The rationale and impact section describes the committees consideration of the recommendations and their view is consistent with the findings in the systematic review that you reference.</p>

				<p>The study comprised a randomised controlled trial (n = 620) which compared the efficacy of two psychological stop smoking interventions. Specifically, Allen Carr's Easyway smoking cessation programme comprising one 5/6 hour group session (plus one or two 3 hour booster sessions over the following 3 months for those who require them) and a 1-1 counselling service with funded pharmacotherapy available via the NHS (comprising one 30 minute session and four weekly follow ups of 10-15 minutes) were compared. Participants in the NHS arm were advised on e-cig use, but devices were not funded. The efficacy of both treatment arms were assessed at 4, 12 and 26 weeks after treatment. The evaluation was compliant with the Russell 6 Standard (which requires, amongst other things, a double blind, randomised design, chemical verification of quit outcomes, and the inclusion of all participants who received treatment in the final analysis). The study concluded that (i) with a well powered sample, no differences between ACE and a specialist stop smoking service with funded pharmacotherapy could be detected and (ii) both services performed at levels comparable to those observed elsewhere in the literature (i.e. in Cochrane reviews).</p>

					identify any concerns with the model that was used for the NMA and the committee focussed their discussion on the results of this NMA.
Association of Respiratory Nurse Specialists	Guideline	010		Question 3. Some good initiative have been implemented in Scotland and other home nations which could be used as examples of good practice and support the implementation of for example smoke free schools.	Thank you for your response. Your comments will be considered by NICE where relevant support activity is being planned.
Association of Respiratory Nurse Specialists	Guideline	010	001	Question 1. Retailers – this will be challenging to enforce, cut backs in local authorities and council funding has meant a reduction in trading standards officers or their remit being extended. This means local authorities find it difficult to support the implementation of recommendations such as these. Also, having worked closely with young people shops are continuing to use tobacco products to gain the trust of young people which puts young people at risk of being taken advantage of in many ways. While local authorities and police are aware, unless they can catch the retailer (this is very difficult to do as retailers will often only sell to people they trust and young people they know making test purchasing harder as children out with the local area are used for safety reasons) in the act, very little can be done.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
Association of Respiratory Nurse Specialists	Guideline	023	027	1.12.6 While I understand wanting to set people up for success this section needs reworded, advising people that the options they have chosen after your consultation with them is less likely to result in a successful quit could undermine their attempt. Please consider rewording this.	Thank you for your comment. The Public Health Advisory Committee (PHAC) have considered your comment and outlined that patient informed choices in decision making regarding their health is a key element within this guideline and within NICE's work more broadly. Recommendations 1.12.4, 1.12.5 and 1.12.6 are intended to form part of the same discussion to support people to make an informed choice. Recommendation 1.12.6 outlines choices that based on the evidence considered PHAC has recommended as 'less likely to result in a successful quite attempt'. It is of their opinion based on the evidence considered that those providing stop-smoking support or advice should discuss all options and their possible outcomes with people when deciding which options to use to stop smoking. We would expect this information to be given to people before they made their choice.
Association of Respiratory Nurse Specialists	Guideline	051	006	Incentive Schemes – this money would need to be ring fenced. Also while this has type of initiative has helped short term abstinence, a lot of women return to smoking when the incentive stops – I'm sure this was the outcome of a similar incentive in Dundee	Thank you. The recommendations are based on the evidence of effectiveness and the implementation of the recommendations is primarily a local commissioning decision.

Asthma UK and the British Lung Foundation	Guideline	010	005	It would be more effective to recommend asking for proof of age from anyone who appears under the age of 25. 'Challenge 25' is a well established procedure within alcohol sales and recommended by the Retail of Alcohol Standards Group, who represent all the major supermarkets and alcohol retailers. While alcohol licensing guidance from the Home Office states that challenging those who appear to under 18 is the minimum requirement, it also highlights challenge 21 and challenge 25 schemes. It would be helpful if NICE guidance did likewise for tobacco sales. Retailers such as Tesco already operate a challenge 25 policy across both alcohol and tobacco, including vaping products.	Thank you for your comment. The Public Health Advisory Committee (PHAC) have considered your comments and have decided not to change the recommendation. PHAC highlighted that Review C and D considered the evidence on proxy purchasing and based on the evidence, expert testimony and the contributions of co-opted members to the committee, the PHAC made the decision to carry forward the previous recommendations. Challenge 25 is specific to alcohol and the committee did not see any evidence to support its use in tobacco control. They were unclear about the provenance of Challenge 25, which is not a government policy.
Asthma UK and the British Lung Foundation	Guideline	013	005 - 007	1.6.4 – While it is important to avoid inadvertently making e-cigarettes desirable to young people, it is just as important to avoid inadvertently reinforcing misperceptions that e-cigarettes are as harmful as smoking. Findings from the annual Smokefree GB survey commissioned by ASH show that the perception among 11–18-year-olds that cigarettes and e-cigarettes are equally harmful has increased since 2013. In 2021, only 43.8% of 11–18-year-olds knew that e-cigarettes were less harmful than cigarettes. <sup>3</sup> Similarly, among adults, around a third (32%) believed e-	Thank you for your comment. This is stated clearly elsewhere in the guideline and the committee were clear that they did not want to say anything that might promote the use of e-cigarettes in under 18s.

				services as part of their interventions to help people manage their financial situation.	
Asthma UK and the British Lung Foundation	Guideline	020	009	NICE already recommend Very Brief Advice (VBA) as an evidence based way of talking to smokers about quitting. It would be useful to refer to that here, linking to the guidance on delivering VBA, which would be more specific than saying 'at every opportunity ask people if they smoke or have recently stopped smoking.' The steps outlined in the draft guidance here are longer than the VBA process, so perhaps VBA could be recommended as the approach to take where time is short, with the more detailed steps outlined here recommended where more time is available.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website
Asthma UK and the British Lung Foundation	Guideline	023	006	It would be useful to add that patients should be told that they are three times more likely to quit with NHS support. <sup>5</sup> <sup>5</sup> NCSCT. Stop smoking services: increase the chance of quitting. 2019	Thank you for your comment. The Public Health Advisory Committee (PHAC) have considered your comment and agreed that based on the systematic reviews of the evidence and expert testimony considered, the guideline sufficiently covers the role of behaviour support in enhancing the effectiveness of treatments and makes sufficient references as to where this could occur. Based on this they have not changed the guideline.
Asthma UK and the	Guideline	028	010 - 013	1.14.1 – We would like to see this section include a bullet point to highlight the mental health benefits of quitting smoking. 				nicotine is approximately 2 hours and longer delays will result in unnecessary discomfort.	
Asthma UK and the British Lung Foundation	Guideline	032	004 - 009	<p>1.14.20 - We welcome the recommendation to tell smokers about the different types of medicinally licensed nicotine containing products, how to use them and if possible, prescribe them. However, we are disappointed that e-cigarettes are not also recommended as a vital intervention for smokers who are in a situation where they need to temporarily abstain. If this guideline only recommends the use of NRT to support tobacco abstinence, this represents an extremely challenging scenario for trusts that currently offer e-cigarettes to service users and risks further disadvantaging people with mental health ill health, who will be left behind. We would worry that failure to include e-cigarettes as a safe, valid and effective way to support temporary abstinence will enable some service providers to opt out of and we will find ourselves in a situation where the teachable moment to support stopping smoking and switching to an e-cigarette is lost.</p> <p>SLaM NHS Foundation Trust provide mental health care services from 4 large London based hospitals (50 wards). Typically, about half of the adult smokers admitted to hospital are current smokers, it is rare to find a smoker</p>	<p>Thank you for your comment. The evidence on the use of nicotine containing e-cigarettes to support temporary abstinence was not reviewed as part of this guideline update and therefore recommendations have not been made in this area.</p> <p>Regarding differing needs between people admitted to acute hospital settings and to mental health settings, these recommendations are greyed out as they are outside the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.</p>

				<p>at the point of admission who decides to make a quit attempt. For the overwhelming majority (95%) their decision at the point of admission is to use whatever support is available to temporarily abstain. Currently, the preferred option to support temporary abstinence is an e-cigarette, because smokers feel that this more closely matches the experience of smoking compared with using NRT products. SLAM have used e-cigarettes in this way since 2012 and typically provide around 400 free e-cigarette starter packs each month. In about 30% of cases the smokers find that the provision of a free e-cigarette starter pack, given with the intention to support temporary abstinence on admission is so effective that they decide to continue using it and do not return to smoking.</p> <p>In 2019 ASH conducted a survey of mental health trusts which found that 42% of mental health trusts in England provide free e-cigarettes to adult smokers on admission to hospital to support temporary abstinence, and as such we believe there is ample evidence to support this consensus practice.<sup>10</sup> More generally in this section of the guidance, we think a distinction should be made between the needs of people admitted to an acute hospital</p>

				<p>fails to include any mention of the Standard. While the subtitle may suggest this section is specific to those who identify smokers and prompt quit attempts (i.e. deliver VBA), there is nothing further in this section on training for those who deliver ongoing stop smoking support (i.e. behavioural support), as has been the case in previous versions of the document. At minimum this should be included for stop smoking services. The wording found in the 2018 NG92 recommendation on this subject served this purpose. The key being 1) stop smoking support is provided by trained staff and 2) that training be consistent with the National Training Standard. Given the level of depth the document goes into for maternity care and closed institutions, there should be at least the equivalent depth provided for all settings (stop smoking services, maternity care, closed institutions, primary care) who are delivering stop smoking support. This should consist of the National Training Standard as default, plus additional training for those working with specific population such as mental health and pregnancy.</p> <p>Overall, there is little said in the new NICE guidance on stop smoking services and stop smoking support delivered in other settings</p>

				smoking cessation. Cochrane Database of Systematic Reviews 2019, Issue 10. Art. No.: CD003999	
Asthma UK and the British Lung Foundation	Guideline	078	027 - 029	<p>This states that nicotine e-cigarettes are of similar effectiveness to NRT. There is moderate certainty evidence that they are more effective than NRT (including in studies where participants are offered combined short and long-acting NRT) and this should be made clear.<sup>22</sup></p> <p>22 Hartmann-Boyce J, McRobbie H, Butler AR, Lindson N, Bullen C, Begh R, Theodoulou A, Notley C, Rigotti NA, Turner T, Fanshawe TR, Hajek P. Electronic cigarettes for smoking cessation. Cochrane Database of Systematic Reviews 2021, Issue 4. Art. No.: CD010216</p>	<p>Thank you. The pairwise meta-analysis found a pooled risk ratio of 1.47 (1.25 – 1.72) for nicotine e-cigs vs single NRT for abstinence at 3 months. The network meta-analysis uses the effectiveness data and NMA models from Thomas' (2020) review as well as results of NICE-conducted rerun searches. This NMA (based on 192 studies) showed no significant effect of e-cigarettes compared to NRT (RR of 1.23 [CrI: 0.73, 1.95]) or long + short NRT (RR: 0.84 [CrI 0.48, 1.40]). The discrepancy between pairwise and NMA effect estimates is likely to be due to the modifying effect of indirect treatment estimates within the network. Consistency checking did not identify any concerns with the model that was used for the NMA and the committee focussed their discussion on the results of this NMA.</p>
Asthma UK and the British Lung Foundation	Guideline	079	008 - 013	<p>This section states the committee had low confidence in the finding of no difference in adverse events in people using nicotine e-cigarettes compared to NRT, e-cigarettes without nicotine, and no treatment, because the studies were powered to investigate effectiveness and not adverse events. Though</p>	<p>Thank you. Details of the adverse events reported are contained in evidence review K and are adverse events rather than serious adverse events.</p> <p>The rationale and impact section describes the committee's consideration of the recommendations and their view is consistent</p>

				tobacco use among groups as having a higher than prevalence for smoking would help to reduce health inequalities in the UK.	
British Medical Association	Guideline	050	009	There is no convincing evidence from randomised placebo-controlled trials that nicotine replacement therapy (NRT) in pregnancy leads to smoking cessation in the third trimester. In the most recent Cochrane review, Claire R et al 2020 (see NICE Evidence Review J) the effect estimate was 1.21 (95%CI 0.95-1.55), moderate confidence.	<p>Thank you. The committee agreed that NRT is likely to be an effective method of stopping smoking in pregnancy but the evidence did not show this to be as effective as the committee would have expected.</p> <p>The committee discussed that doses of NRT was an area where there was a lack of clarity. While the studies tended to use low doses, the committee agreed that higher doses might deliver more benefits, particularly if paired with higher levels of adherence. Because of uncertainty about any potential harms of higher doses, the committee made a research recommendation in this area.</p> <p>The committee were concerned that the very low cessation rate would mean a large number of pregnant women would be needlessly taking NRT. They were also concerned about the risk of relapse to smoking as well as the resultant exposure to environmental tobacco smoke in the home and elsewhere. However, they were also mindful of the additional benefits of quitting</p>

					smoking as well as the resultant exposure to environmental tobacco smoke in the home and elsewhere. However, they were also mindful of the additional benefits of quitting during pregnancy that extend to the foetus and baby and the potential impact on the likelihood of the child taking up smoking if the mother succeeds in quitting. We have amended the recommendation to reflect the uncertainties in the evidence.
British Medical Association	Guideline	050	024	50/24/ Advice that "most smoking-related health problems are caused by other components in tobacco smoke, not by nicotine" is ambiguous at best when given to women who are pregnant, whose most important concern will be the health of their babies. There should be separate statements about the toxicology of nicotine to (1) women and to (2) babies. Investigations of the toxicology of nicotine administered during pregnancy in rhesus monkeys, which have lung development similar to humans demonstrate structural and functional abnormalities that mirror those of human offspring exposed to maternal smoking in pregnancy (decreased expiratory flows, increased pulmonary resistance, increased collagen deposition) and upregulation of alpha-7 nicotinic acetylcholine	Thank you. The committee carefully considered adverse event data in humans during the crafting of these recommendations. NICE does not routinely look at data from non-human studies. The committee agreed that while the statement is ambiguous, it is the most accurate reflection of our current knowledge on the subject. They were also clear that nicotine doses from NRT are much lower than those of smoking.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
				receptors. Investigations in sheep, rats and mice report similar findings. Evidence considered by NICE (Evidence Review J) does not include studies of experimental animals. It is noteworthy that the 2020 report on smoking cessation from the US Surgeon General ( <a href="https://www.hhs.gov/sites/default/files/2020-cessation-sgr-full-report.pdf">https://www.hhs.gov/sites/default/files/2020-cessation-sgr-full-report.pdf</a> ) includes the statement "Nicotine is dangerous for pregnant women and their developing babies".	
British Medical Association	Guideline	050	026	The statement "any risks from using NRT are much lower than those from smoking" is not supported either by the evidence assembled by NICE (Evidence Review J) or by a recent report by the Cochrane Group (Taylor L, et al. Fetal safety of nicotine replacement therapy in pregnancy: systematic review and meta-analysis. <i>Addiction</i> 2021;116(2):239-77).	Thank you. The committee carefully considered adverse event data in humans during the crafting of these recommendations. NICE does not routinely look at data from non-human studies. The committee agreed that while the statement is ambiguous, it is the most accurate reflection of our current knowledge on the subject. They were also clear that nicotine doses from NRT are much lower than those of smoking. The evidence review you cite was unable to come to any conclusions because the findings from the meta-analyses were underpowered and inconsistent.
British Medical Association	Guideline	054	006	The BMA agrees with guidance on smoke free hospital sites and have long standing policy supporting this issue, it is important that healthcare workers and patients are able to use smoke free outdoor space.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
British Medical Association	Guideline	072	008	<p>The BMA agrees with NICE regarding the recommendation for further research into the short- and long-term impacts on e-cigarettes to develop a more comprehensive picture of the harm vs benefit of e-cigarettes over the longer term. In our 2017 report 'E-cigarettes: Balancing risks and opportunities' we highlighted the need for more evidence around the long term harm of e-cigarettes and their efficacy as a cessation method. As such we welcome the evidence presented that e-cigarettes have been found to be an effective tool for helping people quite smoking.</p> <p>Given the evidence supporting the use of e-cigarettes, we agree that it is important further research is conducted into the long-term health impacts of cigarettes. This will also give policy makers a better understanding of how to most effectively regulate e-cigarettes.</p>	Thank you for your comment.
British Medical Association	Guideline	073	001	<p>Agree that research into how smoking services can be modified to improve accessibility for under-served groups will be a useful piece of evidence moving forward, given the propensity for those who smoke and are in a more deprived social-demographic to be more likely to develop chronic non-communicable disease</p>	Thank you for your comment

				both from tobacco use and from other drivers of ill health.	
British Society of Dental Hygiene and Therapy	Evidence Review N	General	General	As an observation, many studies related to interventions which included literature as an aid to prevent re-uptake and maintain cessation. Any guidance produced relating to prevention of re-uptake and maintaining cessation should consider the quality of the information in the literature used in these studies and replicate this within the guidance. This could be particularly relevant where an intervention is part of additional healthcare, and the smoker/patient has a lot of information to take in as part of the appointment. It is noted that cost of production of materials could be a concern/barrier.	Thank you for your comments. The guideline outlines several recommendations on promoting quitting including raising awareness (1.8.1 to 1.8.5), promoting stop-smoking support for developers of communication strategies (1.9.1 to 1.9.2) which includes coordinating communications strategies and signposts to evidence to underpin these strategies for example Cochrane reviews and advice regarding audience research and targeting and tailoring approaches. PHAC have considered the evidence presented and other testimony and developed the guideline that considers settings, smoking modality, high risk-groups, policy and commissioning amongst other things. Given the breadth of the evidence considered PHAC have synthesised the evidence to develop the guideline which is hyperlinked to the reviews within the guideline document for the purposes of transparency but to also allow the additional per study details for example the information in the literature regarding prevention of re-uptake or maintenance of cessation to be considered in more detail by a prospective user of the guideline.

British Society of Dental Hygiene and Therapy	Evidence Review N	General	General	A role in prevention of re-uptake could be undertaken by all appropriately trained allied healthcare professionals, including medicine and dentistry	Thank you for your comment. The guideline acknowledges the role of allied healthcare professionals in the prevention of re-uptake of smoking (Recommendation 1.17 adherence and relapse prevention) and makes recommendations for them regarding supporting the prevention of re-uptake and maintenance of smoking cessation. Recommendation 1.17 refers to people providing 'stop-smoking support' which is defined in the glossary as interventions and support to stop smoking, regardless of how services are set up and may include allied healthcare professionals.
British Society of Dental Hygiene and Therapy	General	General	General	The absence of links in the document between oral health including oral cancer and smoking is disappointing. Smoking has detrimental effects on teeth and gums and is a known risk factor for periodontal disease (gum disease) and head and neck cancers that include squamous cell carcinomas of the lips, the hard and soft palate, the tongue, and floor of mouth, attributing to 85% of oral and pharyngeal cancers. The dental professional is the ONLY healthcare provider who performs a comprehensive head and neck examination that includes the face, skin, nose, mouth, tonsils, back of the throat and lymph as part of	Thank you for your comment. The Public Health Advisory Committee have considered your comments and are of the opinion that the guideline does not require an additional reference to the links between oral cancer and smoking specifically. Recommendation 1.8.1 refers to the risk posed by smoking in causing cancer more generally with specific reference to oropharyngeal cancers and periodontal disease (see recommendations 1.16.2 and 1.16.14). The Public Health Advisory Committee have considered your comments and are of the

				<p>which recommends "Use the best available evidence of effectiveness, such as Cochrane reviews".</p> <p>As the evidence continues to develop and evolve, it is important that in the overview section of the guidelines there is a generic recommendation that research outcomes are taken into account. We suggest something along the lines, "When developing and implementing policies to prevent uptake, promote quitting and treat dependence it is essential to use the best available evidence of effectiveness, such as Cochrane reviews".</p>	<p>areas for consideration when this guideline or aspects of this guideline are considered for update.</p> <p>NICE routinely checks that published guidelines are current, accurate and up to date via our surveillance function which explores if there is any new evidence to contradict, reinforce or clarify guideline recommendations. Surveillance also identifies new interventions that may need to be considered within a guideline and explores changes in context that may mean modifications are needed, for example, changes in policy, infrastructure, legislation or costs. A proactive approach is taken that includes reacting to events at any time after guideline publication (for example, publication of a key study).</p>
Cancer Research UK	Guideline	General	General	<p>Guaranteed financial incentives for quitting smoking are not highlighted as an effective intervention in the general population, but we think NICE should consider the evidence on this. Some studies have suggested high certainty evidence of their effectiveness in the general population of people who smoke.[1,2]</p> <p><u>References</u></p>	<p>Thank you for your comment. Incentives were only considered in pregnant women. Incentives for other populations is outside the scope of this update. Please see the <a href="#">scope document</a> on the NICE website.</p>

				smoking or smoking more frequently as a way to give up smokeless tobacco.	Please see the <a href="#">scope document</a> on the NICE website.
Cancer Research UK	Guideline	056 - 062	N/A	Section 1.22 - We think it would be helpful to make specific reference to the Targeted Lung Health Check programme in England and the opportunity this presents for smoking cessation, which must be adequately resourced and seen as a central tenet of the successful delivery of the Programme, with high quality, comprehensive smoking cessation across all TLHC sites.	Thank you for your comment. Recommendation 1.11 (Identifying and quantifying people's smoking) outlines recommendations for health and social care professionals and those providing stop-smoking support or advice. Recommendation 1.11.1 outlines that at every opportunity, 'ask people if they smoke or have recently stopped' which would include opportunities presented during the Targeted Lung Health Check programme.
Cancer Research UK	Guideline	022 - 027	General	Section 1.12 - This section should clearly direct users to the harm reduction approaches laid out in section 1.15 and box 1.	Thank you for your comment. Recommendation 1.12 refers to stop-smoking interventions for adults who smoke highlighting options that should be accessible and discussions and advice to be delivered when engaging with these options. Recommendation 1.15 is more specific, focusing on supporting people who don't want, or are not ready, to stop smoking. Recommendation 1.15 is a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website. The Public Health Advisory Committee (PHAC) discussed your comment and agreed not to make any further changes.

*Comments received in the course of consultations carried out by NICE are published in the interests of openness and transparency, and to promote understanding of how recommendations are developed. Stakeholder	Document	Page No	Line No	Comments	Developer's response
Cancer Research UK	Guideline	013	001 - 007	Recommendations 1.6.3 and 1.6.4 - Cancer Research UK agrees with the overall recommendation to discourage e-cigarette use in school children and the importance of differentiating e-cigarettes from tobacco products. However, there should be a greater emphasis in the guidelines on page 76 of the uncertainty of the relationship between vaping in young adults and later smoking. (Currently it cites on page 76 "The committee wanted to discourage e-cigarette use among young people and young adults who do not smoke because evidence shows that use of e-cigarettes is linked with a higher chance of ever smoking later in life.") However, NICE's evidence review recognises limitations in the studies included, for example insufficient adjustment for key confounding variables. In addition, the majority of studies looked at "ever smoking", so cannot give insight into the relationship between e-cigarette use and habitual smoking. The new guidelines also do not highlight the difficulty in assessing the gateway effect due to the "common liability hypothesis", whereby some young adults have characteristics that may make them more likely to engage in risky behaviours - like alcohol use, drug use, smoking and vaping. Therefore, studies examining smoking and vaping in	Thank you for your comment. The Public Health Advisory Committee (PHAC) considered your comment and feel that the current wording is sufficient in conveying the relationship between vaping in young adults and later smoking based on the evidence they have considered. Considering the effects of e-cigarettes as a gateway was outside the remit of this guideline, as was considering the illegal use of e-cigarettes by young people under 18.

				<p>young people don't necessarily show that vaping leads them to start smoking, but that they may be likely to do both anyway. Overall, there's no strong evidence for a gateway effect in the UK. Although experimentation with e-cigarettes among young people has increased in recent years, regular vaping in young people in the UK remains very low. In a representative survey of 11 to 17 year-olds in Great Britain in 2021, out of 1,785 never smokers, only one person reported vaping daily.[1]</p> <p>The recommendations should instead be amended to focus on the need to protect young people from using e-cigarettes based on the fact that they are not risk free and their long-term effects are unknown. E-cigarettes should only be used as a smoking cessation tool, so should not be used by never-smokers, including young people. We would therefore suggest that recommendation 1.6.4 is more directive, and includes copy like the following: "When discussing e-cigarettes, make it clear why children, young people and young adults who do not smoke should avoid e-cigarettes (as they are not risk free and we don't know if there are long term effects of using them) to avoid inadvertently making them desirable." We would also suggest the copy on page 76 is</p>

Cancer Research UK	Guideline	023	008 - 010	<p>Recommendation 1.12.3 - We would suggest explaining where and how this behavioural support would be accessed by the patient. It would also be helpful to recommend referral to stop smoking services if appropriate. Stop Smoking Services have been shown to be very effective in helping people successfully stop smoking. Compared with no support, people who use prescription medication and behavioural support from stop smoking services are around 3 times more likely to stop smoking. Those who use prescription medication with brief advice are around 1.6 times more likely to successfully stop compared with no support.[1]</p> <p><u>Reference</u></p> <p>1. Kotz D, Brown J, West R. 'Real-world' effectiveness of smoking cessation treatments: a population study. <i>Addiction</i>. 2014 Mar;109(3):491-9. doi: 10.1111/add.12429. Epub 2013 Dec 20. PMID: 24372901</p>	<p>Thank you for your comment. Recommendation 1.12 outlines that these recommendations are for people providing stop-smoking support or advice (p.22, lines 16 to 18). Recommendation 1.12.5 refers to the point you raise regarding the impact of behavioural support on the effectiveness of treatment options on successful quit attempts. The Public Health Advisory Committee (PHAC) has made its recommendations based on the best available evidence of effectiveness and costs-effectiveness and expert testimony. It is beyond NICE's remit to specify local commissioning decisions but provide guidance based on the evidence considered.</p>
Cancer Research UK	Guideline	023  024	027 - 029  001 - 003	<p>Recommendation 1.12.6 - Cancer Research UK advise altering wording of recommendation to 'If a person's stop smoking options are not limited by medication indication or other factors, advise that the options that are less likely...' so that people whose options</p>	<p>Thank you for your comment. The Public Health Advisory Committee (PHAC) discussed your comment. Central to the guideline was patient-led choice and informed decision making. Recommendation 1.12.5 and 1.12.6 reflect this element</p>

*Comments received in the course of consultations carried out by NICE are published in the interests of openness and transparency, and to promote understanding of how recommendations are developed. 				3. Hajek P, Phillips-Waller A, Przulj D et al. A randomised trial of e-cigarettes versus nicotine-replacement therapy. New England Journal of medicine. 2019.	
Cancer Research UK	Guideline	026	007 - 010	Recommendation 1.12.15 - Cancer Research UK believes that patients should be encouraged to use their nicotine-containing e-cigarette for as long as they feel is necessary to remain abstinent from smoking and calls for greater clarity in NICE guidelines on this issue. Use patterns of e-cigarettes varies by individuals, however evidence suggests that continued longer-term use of e-cigarettes is much higher than NRT. In a randomised control trial published in 2019 comparing e-cigarettes versus NRT for smoking cessation in Stop Smoking Services, e-cigarettes were nearly twice as effective as NRT when comparing 1-year quit rates. However, amongst those who successfully quit, continued use of the product was nearly 9x higher in the e-cigarette group compared with the NRT group.[1] Therefore, people who stop smoking using e-cigarettes may continue to use them for a longer period than NRT. As we currently do not have sufficient evidence on the optimum time period to continue e-cigarette use after cessation, we believe that patients should be encouraged to use their	Thank you for your comment. Recommendation 1.12.15 focuses on discussing the use of nicotine e-cigarettes for long enough to prevent a return to smoking. The recommendation is therefore consistent with the approach you suggest. It would not be possible to be more prescriptive, as this may vary among individuals.

					the committee noted there was a lack of consensus of what constitutes a severe mental health condition. They heard from experts that people with other mental health conditions may need additional support as well. This applies both at an individual level and, for those in mental health settings, at a system level. The committee agreed that additional support should be offered to people with severe mental health conditions, but although it might be considered for other people with mental health conditions, there was insufficient evidence to make a wider recommendation.
Cancer Research UK	Guideline	032	004 - 010	<p>Recommendation 1.14.20 - We welcome the recommendation to inform people who smoke and are admitted to secondary care about the different types of medicinally licensed nicotine containing products, how to use them and if possible, prescribe them. We suggest that e-cigarettes are also recommended as an intervention, in both acute and mental health settings.</p> <p>Public Health England recommends the use of e-cigarettes as an alternative to smoking in mental health organisations.[1] In 2019, ASH conducted a survey of mental health trusts which found that 42% of trusts in England</p>	Thank you for your comment. The evidence on the use of nicotine containing e-cigarettes to support temporary abstinence not reviewed as part of this guideline update and therefore recommendations have not been made in this area.

				<p>provide free e-cigarettes to adult smokers on admission to hospital to support temporary abstinence.[2] Therefore, the use of e-cigarettes in these settings is becoming increasingly well established.</p> <p>References</p> <ol style="list-style-type: none"> <li>Public Health England. Using electronic cigarettes in NHS mental health organisations. 2020.</li> <li>Action on Smoking and Health (ASH). Progress towards smokefree mental health services. Findings from a survey of mental health trusts in England. 2019.</li> </ol>	
Cancer Research UK	Guideline	033	026 - 028	<p>Recommendation 1.14.27 - we are concerned that the amended wording from the previous guidelines suggests that a fully operating system for supporting staff in secondary care and closed institutions to stop smoking is not necessary, and instead advice and guidance alone should be provided. It is important that a system to support staff to stop smoking is in place, therefore we suggest adding back the previous wording, so the recommendation reads: 'Advise all staff who smoke to stop. Ensure systems are in place for staff who smoke to receive advice and guidance on how to stop in one go'.</p>	<p>Thank you for your comment. This recommendation was amalgamated from older recommendations and we agree that the amended wording does not reflect the spirit of the recommendation. We have amended the wording.</p>

Cancer Research UK	Guideline	044	018 and 019	For recommendation 1.17.2, we ask for NICE to clarify whether "pharmacotherapy" includes medically licensed nicotine containing products. We understand that the NICE definition encapsulates both, however evidence on relapse prevention varies between NRT and stop smoking medications.	Thank you. Pharmacotherapy is defined in the glossary and includes stop-smoking medication such as varenicline or bupropion, as well a nicotine replacement therapy.
Cancer Research UK	Guideline	045	019 and 020	Recommendation 1.17.6 - Given PH45, recommendation 4 bullet 7 has been deleted, we would suggest updating wording to: 'For people attempting to stop smoking and those reducing their harm, offer follow-up appointments and review the approach taken at each contact.' The current wording is quite passive and relies on the person who smokes making contact again in order for there to be an opportunity to review the approach. The body of evidence as a whole suggests that there are multiple different effective ways of reducing the risk of relapse (as represented by NICE's evidence review N), so it makes sense to have touch points that aren't contingent on the person smoking to organise.	Thank you for your comment. We have made this clarification to the recommendation.
Cancer Research UK	Guideline	051	008 - 021	Recommendation 1.20.12 - As highlighted by NICE on page 87 of the guidelines, financial resources will need to be found to fund the voucher incentive scheme.  It is important to acknowledge that increased	Thank you. The recommendations are based on the evidence of effectiveness, and the implementation of the recommendations is primarily a local commissioning decision.

				<p>recommendation 1.23.2, research from Asthma UK and the British Lung Foundation shows that too few are given the training in VBA they need to make a difference to patients who smoke. This research found that over half of UK GPs have received no training in VBA. Of those GPs that received training, only 2% of respondents self-reported that VBA training was comprehensive and in total only 8% go on to deliver VBA daily.[2] A study by CRUK published in March 2019 found that just over half the GPs and practice nurses surveyed (53%) frequently completed all steps of VBA with people who smoke.[3]</p> <p>It is also likely that the changed delivery of primary care consultations due to the pandemic may have compounded the challenges of offering effective VBA, which should be addressed in training for healthcare professionals. A survey of UK GPs commissioned by Cancer Research UK found that during the pandemic where GP consultations have been being delivered remotely, 40% of GPs surveyed strongly agreed or agreed with the statement that it was more challenging to deliver VBA through remote consultation compared to face to face, and 31% of GPs agreed or strongly agreed</p>

Cancer Research UK	Guideline	067	017 and 018	Terms used in this guideline' section, 'Behavioural support' definition - Given recommendations in section 1.12 also support the use of nicotine-containing e-cigarettes alongside behavioural support, Cancer Research UK believe that nicotine-containing e-cigarettes should be included here alongside pharmacotherapies in this definition.	Thank you. Cessation of e-cigarettes is outside the scope of this guideline. Please see the <a href="#">scope document</a> on the NICE website.
Cancer Research UK	Guideline	068 and 069	028 - 030 001 - 006	Terms used in this guideline' section, 'nicotine-containing products' definition - Cancer Research UK asks for clarity on whether nicotine-containing e-cigarettes are considered "nicotine-containing products" as it is unclear from this definition. It may be necessary to future-proof this definition so that newer nicotine containing products are not considered as smoking cessation aids (e.g. nicotine pouches) prior to a full assessment.  Cancer Research UK believe this definition should include nicotine-containing e-cigarettes.	Thank you. We have clarified the definition.
Cancer Research UK	Guideline	071	013 - 017	Terms used in this guideline' section, 'stop in one go' definition - The use of the word 'limited time afterwards' is quite vague. We want everyone who smokes to stop and not rely on pharmacotherapy or nicotine-containing e-cigarettes indefinitely, however use for an extended period of time is better than relapsing to smoking. Therefore CRUK suggest a	Thank you for your comments. PHAC have considered your comments and have amended the guideline in line with your suggested wording.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
				<p>wording change to '...and for a period of time afterwards, depending on the individual's needs'.</p> <p>Cancer Research UK believes that patients should be encouraged to use their nicotine-containing e-cigarette for as long as they feel is necessary to remain abstinent from smoking. Use patterns of e-cigarettes varies by individuals, however evidence suggests that continued longer-term use of e-cigarettes is much higher than NRT. In a randomised controlled trial published in 2019 comparing e-cigarettes versus NRT for smoking cessation in Stop Smoking Services, e-cigarettes were nearly twice as effective as NRT when comparing 1-year quit rates. However, amongst those who successfully quit, continued use of the product was nearly 9x higher in the e-cigarette group compared with the NRT group.[1] Therefore, people who stop smoking using e-cigarettes may continue to use them for a longer period than NRT. As we currently do not have sufficient evidence on the optimum time period to continue e-cigarette use after cessation, we believe that patients should be encouraged to use their e-cigarette for as long as they feel is necessary to remain abstinent from smoking.</p>

Cancer Research UK	Guideline	073	014 - 016	<p>Recommendations for research section, recommendation 6 - Currently, research suggests that people who smoke need to switch completely to e-cigarettes to achieve the health benefits.[1] There is currently no good evidence that dual use of e-cigarettes/cigarettes is worse for health than exclusive smoking, so we agree that further high quality research in this area would be beneficial. Transitions from dual use of e-cigarettes/cigarettes to complete abstinence are also unclear, with some studies suggesting that dual use does not undermine smoking quit rates[2] The patterns of e-cigarette use alongside tobacco need to be understood more clearly in order to counsel patients on how best to use e-cigarettes to stop smoking.</p> <p>References 1. 				habitual smoking compared with ever smoking in surveys used. In addition, many studies do not consider the difficulty in assessing the gateway effect due to the "common liability hypothesis", whereby some young adults have characteristics that may make them more likely to engage in risky behaviours - like alcohol use, drug use, smoking and vaping. Therefore, studies examining smoking and vaping in young people don't necessarily show that vaping leads them to start smoking, but that they may be likely to do both anyway. Future research should attempt to overcome these limitations. Research in this area should also be interpreted with caution and population level rates of both e-cigarette use and smoking should be monitored closely to assess this relationship.	
Cancer Research UK	Guideline	075	010 - 013	<p>Recommendations for research, research recommendation 12 – Cancer Research UK agree with this recommendation for research.</p> <p>Smoking is unfortunately a relapsing condition, and therefore cannot be treated in an episodic manner. [1,2] So there needs to be a continuum of support across both primary and secondary care.</p>	Thank you for your comment

				particularly in key areas such as smoking cessation support in underserved groups and in pregnancy, it is important that in the overview section of the guidelines there is a generic recommendation that research outcomes are taken into account. We suggest something along the lines, "When developing and implementing policies to prevent uptake, promote quitting and treat dependence it is essential to use the best available evidence of effectiveness, such as Cochrane reviews".	Please see the <a href="#">scope document</a> on the NICE website. The research recommendations developed by PHAC seek to address the gaps in the evidence identified during the guideline development process with the hope of stimulating research in these areas for consideration when this guideline or aspects of this guideline are considered for update. NICE routinely checks that published guidelines are current, accurate and up to date via our surveillance function which explores if there is any new evidence to contradict, reinforce or clarify guideline recommendations. Surveillance also identifies new interventions that may need to be considered within a guideline and explores changes in context that may mean modifications are needed, for example, changes in policy, infrastructure, legislation or costs. A proactive approach is taken that includes reacting to events at any time after guideline publication (for example, publication of a key study)
Cochrane Tobacco Addiction Group	Guideline	031	019 - 023	May be worth explicitly addressing the concern that quitting smoking will have negative impact on mental health. Cochrane review shows that that mental health does not worsen as a result of quitting smoking, and very low- to moderate-	Thank you for this reference. However this review would not have been eligible for inclusion in the evidence reviewed by the committee as it focuses on the benefits of stopping smoking on mental health, whereas

				certainty evidence that smoking cessation is associated with small to moderate improvements in mental health. These improvements are seen in both unselected samples and in subpopulations, including people diagnosed with mental health conditions. (See: Taylor GMJ, Lindson N, Farley A, Leinberger-Jabari A, Sawyer K, te Water Naudé R, Theodoulou A, King N, Burke C, Aveyard P. Smoking cessation for improving mental health. Cochrane Database of Systematic Reviews 2021, Issue 3. Art. No.: CD013522. DOI: 10.1002/14651858.CD013522.pub2.)	the focus of the evidence considered by the committee was on the effectiveness of smoking cessation interventions for people with mental health conditions.
Cochrane Tobacco Addiction Group	Guideline	059	010 - 011	Clarify statement "Include nicotine-containing products as options for sale in secondary settings (for example, in hospital shops.)" Cigarettes are nicotine containing products but this is not what is meant. I assume what is meant is NRT and nicotine containing e-cigarettes. This would benefit from being explicitly stated.	Thank you. Nicotine containing products is defined in the glossary section of the guideline. The definition of nicotine containing products has been amended to clarify that it includes nicotine containing e-cigarettes.
Cochrane Tobacco Addiction Group	Guideline	075	007 - 013	We suggest considering the addition of two further points regarding recommendations for further research into relapse prevention. Firstly, we see a clear need for more research on varenicline for relapse prevention, given the committee acknowledges its likelihood of increasing long-term abstinence and Cochrane	Thank you. Research recommendations in NICE guidelines are specifically to address gaps in the research that the committee considered while making their recommendations. They do not address general gaps in the evidence.

				evidence suggests benefit (see: Livingstone-Banks J, Norris E, Hartmann-Boyce J, West R, Jarvis M, Chubb E, Hajek P. Relapse prevention interventions for smoking cessation. Cochrane Database of Systematic Reviews 2019, Issue 10. Art. No.: CD003999. DOI: 10.1002/14651858.CD003999.pub6. Accessed 28 July 2021). Secondly, we suggest it would be a good idea to recommend more trials looking at relapse prevention interventions delivered to people who have been abstinent for 4+ weeks, as there is little evidence in this group. The committee's emphasis on the importance and paucity of this kind of longer-term evidence is reflected in evidence review N: "For this reason, the committee focussed on evidence where relapse was clearly additional to cessation and delivered at a later point (this included behavioural interventions for assisted abstainers [Figure 11, GRADE profile 5], and pharmacotherapy for assisted abstainers [Figure 13-16, GRADE profile 6]). There is a paucity of evidence on this type of longer term relapse prevention." (p.66 of evidence review N)	
Cochrane Tobacco Addiction Group	Guideline	078	027 - 029	Statement currently says that nicotine EC are of similar effectiveness to NRT. There is moderate certainty evidence that they are more effective than NRT (including in studies	Thank you. The pairwise meta-analysis found a pooled risk ratio of 1.47 (1.25 – 1.72) for nicotine e-cigs vs single NRT for abstinence at 3 months. The network meta-analysis uses

				where participants are offered combined short and long-acting NRT) and this should be made clear. See: Hartmann-Boyce J, McRobbie H, Butler AR, Lindson N, Bullen C, Begh R, Theodoulou A, Notley C, Rigotti NA, Turner T, Fanshawe TR, Hajek P. Electronic cigarettes for smoking cessation. Cochrane Database of Systematic Reviews 2021, Issue 4. Art. No.: CD010216. DOI: 10.1002/14651858.CD010216.pub5	the effectiveness data and NMA models from Thomas' (2020) review as well as results of NICE-conducted rerun searches. This NMA (based on 192 studies) showed no significant effect of e-cigarettes compared to NRT (RR of 1.23 [CrI: 0.73, 1.95]) or long + short NRT (RR: 0.84 [CrI 0.48, 1.40]). The discrepancy between pairwise and NMA effect estimates is likely to be due to the modifying effect of indirect treatment estimates within the network. Consistency checking did not identify any concerns with the model that was used for the NMA and the committee focussed their discussion on the results of this NMA.
Cochrane Tobacco Addiction Group	Guideline	079	010 - 013	This section states the committee had low confidence in the finding of no difference in adverse events in people using nicotine EC compared to NRT, EC without nicotine, and no treatment, because the studies were powered to investigate effectiveness and not adverse events. Though this is an issue for serious adverse events, where events are rare, for non serious adverse events, which this section appears to refer to at first glance, this is not an issue of underpowering because non-serious adverse events are more common than cessation (a study powered to detect a difference in cessation would also be powered	Thank you. Details of the adverse events reported are contained in evidence review K and are adverse events rather than serious adverse events. The rationale and impact section describes the committees consideration of the recommendations and their view is consistent with the findings in the systematic review you reference.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
				<p>the greatest challenge to implementing this guidance effectively will lie in the availability of e-cigarettes. The lack of a medically approved device on prescription is the greatest barrier. Without the option for practitioners to issue prescriptions for e-cigarettes in the presence of the potential quitter, a valuable point of intervention may be lost. The individual may conclude that sourcing their own device is too arduous or costly and consequently lose motivation to make a quit attempt with the most effective cessation tool.</p> <p>2. Would implementation of any of the draft recommendations have significant cost implications? We do not believe there would be significant cost implications to the recommendations that we concern ourselves with.</p> <p>3. What would help users overcome any challenges? (For example, existing practical resources or national initiatives, or examples of good practice.)</p> <p>In order to overcome the challenge outlined in our answer to Q1, the relevant organisations must be prepared to approach solutions</p>	<p>guideline. The guideline highlights on p.2 that this guideline may be relevant for manufacturers and retailers of nicotine-containing e-cigarettes. Recommendation 1.11.4, 1.12.1, 1.12.4 - 5, 1.12.13 - 17, highlight the provision of advice regarding the use of e-cigarettes as a tool to aid quit attempts and sustaining non-smoking behaviour. The committee recognised the need for evidence about what factors may influence use of e-cigarettes and have made research recommendations relating to any possible impacts of amount of nicotine, frequency of use and flavourings.</p>

				who smoke by the lack of a medically licensed device. While it would not be appropriate for NICE to issue guidance to the MHRA in this document, we seek reassurance that bilateral discussions between the organisations are taking place to ensure that the full benefits of the recommendation can be realised by making a licensed device available.	include medically licensed products, behavioural support, and brief advice. NICE does not engage with the MRHA regarding licensing decisions. NICE guidelines are developed by its Public Health Advisory Committee (PHAC) based on systematic reviews of the evidence and expert testimony. People have the right to be able to make informed decisions about their care. Our guidance should be considered when making decisions with them.
Cuts Ice Limited	Guideline	025	021 - 024	We believe that these are sensible sources of information about the safety of e-cigarettes.	Thank you for your comment
Cuts Ice Limited	Guideline	026	007 - 010	Rec 1.12.15 – The contents of this recommendation run the risk of creating a sense of failure if the user does not reduce the nicotine content of their e-cigarette to 0. This could lead to users reducing their nicotine content before they are ready and risk taking up cigarettes to achieve the desired strength again. The National Centre for Smoking Cessation and Training ( <a href="https://elearning.ncsct.co.uk/e_cigarettes-stage_6">https://elearning.ncsct.co.uk/e_cigarettes-stage_6</a> ) highlights the importance of achieving the sufficient dosage of nicotine. Conflating the issues of tobacco cessation and nicotine elimination risks confusing potential quitters and achieving neither outcome.	Thank you for your comment. The rationale and impact section of the guideline outline the Public Health Advisory Committees discussion regarding this recommendation. The committee used their knowledge and experience to supplement the very limited and uncertain evidence about harms. The committee agreed that with the limited data on effects of longer-term use, people should only use e-cigarettes for as long as they help prevent them going back to smoking. The committee discussed that it is more likely that people will not get enough nicotine to help them stop smoking, than get too much. They agreed that not getting enough nicotine is likely to increase the risk that the person will

Stakeholder	Document	Page No	Line No	Comments	Developer's response
				Discussions with potential quitters should be on tobacco cessation solely.	return to smoking, so they recommended that people should be encouraged to use as much as they need (1.12.17) and told how to use the products effectively (1.12.14)
Cuts Ice Limited	Guideline	031	014 - 016	Rec 1.14.18: We do not oppose this recommendation but would request that NICE submit the relevant evidence to local consultations on indoor or outdoor smoking or vaping policies.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
Cuts Ice Limited	Guideline	078	027 - 029	We disagree with the Committee's view that vaping provides similar efficacy to Nicotine Replacement Therapy. The long-awaited randomised control trial by Hayek, et al ( <a href="https://www.nejm.org/doi/full/10.1056/NEJMoa1808779">https://www.nejm.org/doi/full/10.1056/NEJMoa1808779</a> ) confirmed that vaping products were twice as effective at helping smokers switch when compared to NRT products.	Thank you. The pairwise meta-analysis found a pooled risk ratio of 1.47 (1.25 – 1.72) for nicotine e-cigs vs single NRT for abstinence at 3 months. The network meta-analysis uses the effectiveness data and NMA models from Thomas' (2020) review as well as results of NICE-conducted rerun searches. This NMA (based on 192 studies) showed no significant effect of e-cigarettes compared to NRT (RR of 1.23 [CrI: 0.73, 1.95]) or long + short NRT (RR: 0.84 [CrI 0.48, 1.40]). The discrepancy between pairwise and NMA effect estimates is likely to be due to the modifying effect of indirect treatment estimates within the network. Consistency checking did not identify any concerns with the model that was used for the NMA and the committee focussed their discussion on the results of this NMA.

Priorities Advisory Committee				licensed in the future, its clinical and cost effectiveness would need to be evaluated before it was commissioned, and prescribing was permitted.	for clinical effectiveness and safety by the MHRA as part of the licensing process. At that point, NICE would consider reassessing the cost-effectiveness of the product.
East of England Priorities Advisory Committee	Guideline	023	005	The guideline suggests making e-cigarettes 'accessible' as a stopping smoking intervention. As there are currently no licensed e-cigarettes so they cannot be prescribed, does this mean making unlicensed e-cigarettes available free of charge from smoking cessation service as part of a quit attempt? If yes, how will this be funded?	Thank you for your comment. The committee was aware that local areas have very different commissioning arrangements for smoking cessation and agree that the most important thing was to ensure that people had access to the range of interventions.
East of England Priorities Advisory Committee	Guideline	026	001	The guideline states that there is not enough evidence to know whether there are long-term harms from e-cigarette use. We are concerned about the proposal to allow future prescribing of a medicinal product for which we have inadequate long term safety data, particularly as these licensed products could have a higher nicotine content than currently specified under the UK Tobacco and Related Products Regulations 2016. ; <a href="https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/962221/Vaping_in_England_evidence_update_February_2021.pdf">https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/962221/Vaping_in_England_evidence_update_February_2021.pdf</a> and Licensing procedure for electronic cigarettes as medicines - GOV.UK (www.gov.uk).	<p>Thank you for your comment. The guideline does not advocate that e-cigarettes are prescribed. The committee has recommended that nicotine containing e-cigarettes are one of a number of options to be made accessible to adults who smoke. As part of their discussions, they considered the potential long-term effects of using these products. The rationale and impact section relating to this recommendation outlines the issues the committee considered. These include the following:</p> <p>The extensive harms of smoking are well known, and the committee agreed it is unlikely that e-cigarettes could cause similar levels of harm</p>

				<p>the need to take into account the outcomes of any such research, in section 1.9.2 bullet 2 which recommends "Use the best available evidence of effectiveness, such as Cochrane reviews".</p> <p>To our knowledge some, if not all, of the research recommendations are already being taken forward. For example, NIHR has funded 'Helping Pregnant Smokers Quit: A Multi-Centre RCT of Electronic Cigarette and Nicotine Patches', although unfortunately the research may not be available before the guidelines are published so is unlikely to be able to be taken into account during the consultation. NIHR is also funding research on smoking cessation in underserved groups such as prisoners and the homeless.</p> <p>As the evidence continues to develop and evolve, it is important that in the overview section of the guidelines there is a generic recommendation that research outcomes are taken into account. We suggest something along the lines, "When developing and implementing policies to prevent uptake, promote quitting and treat dependence it is essential to use the best available evidence of effectiveness, such as Cochrane reviews".</p>	<p>during the guideline development process with the hope of stimulating research in these areas for consideration when this guideline or aspects of this guideline are considered for update.</p> <p>NICE routinely checks that published guidelines are current, accurate and up to date via our surveillance function which explores if there is any new evidence to contradict, reinforce or clarify guideline recommendations. Surveillance also identifies new interventions that may need to be considered within a guideline and explores changes in context that may mean modifications are needed, for example, changes in policy, infrastructure, legislation or costs. A proactive approach is taken that includes reacting to events at any time after guideline publication (for example, publication of a key study) and a standard check every 5 years.</p>

				is now best practice approach around age of sale restricted products.	
Fresh and Balance	Guideline	013	005 - 007	<p>1.6.4 – While it is important to avoid inadvertently making e-cigarettes desirable to young people, it is just as important to avoid inadvertently reinforcing misperceptions that e-cigarettes are as harmful as smoking. Findings from the annual Smokefree GB survey commissioned by ASH show that the perception among 11–18-year-olds that cigarettes and e-cigarettes are equally harmful has increased since 2013. In 2021, only 43.8% of 11–18-year-olds knew that e-cigarettes were less harmful than cigarettes.<sup>3</sup> Similarly, among adults, around a third (32%) believed e-cigarettes were more or equally as harmful as cigarettes in 2021, compared to 42% who thought they were less harmful.<sup>4</sup> This is relevant because adults will be responsible for giving children advice about e-cigarettes.</p> <p>An additional sentence should be added to recommendation 1.6.4 consistent with the wording on page 26 lines 1-4, that “However, it is also important to make clear that although there is not enough evidence to know whether there are long-term harms from e-cigarettes, they are likely to be substantially less harmful than smoking.”</p>	Thank you for your comment. This is stated clearly elsewhere in the guideline and the committee were clear that they did not want to say anything that might promote the use of e-cigarettes in under 18s.

				<p>products, how to use them and if possible, prescribe them. However, we are disappointed that e-cigarettes are not also recommended as a vital intervention for smokers who are in a situation where they need to temporarily abstain. If this guideline only recommends the use of NRT to support tobacco abstinence, this represents an extremely challenging scenario for trusts that currently offer e-cigarettes to service users and risks further disadvantaging people with mental health ill health, who will be left behind. We would worry that failure to include e-cigarettes as a safe, valid and effective way to support temporary abstinence will enable some service providers to opt out of and we will find ourselves in a situation where the teachable moment to support stopping smoking and switching to an e-cigarette is lost.</p> <p>SLaM NHS Foundation Trust provide mental health care services from 4 large London based hospitals (50 wards). Typically, about half of the adult smokers admitted to hospital are current smokers, it is rare to find a smoker at the point of admission who decides to make a quit attempt. For the overwhelming majority (95%) their decision at the point of admission is to use whatever support is available to temporarily abstain. Currently, the preferred</p>	<p>reviewed as part of this guideline update and therefore recommendations have not been made in this area.</p> <p>Regarding differing needs between people admitted to acute hospital settings and to mental health settings, these recommendations are greyed out as they are outside the scope for this update. 				<p>option to support temporary abstinence is an e-cigarette, because smokers feel that this more closely matches the experience of smoking compared with using NRT products. SLAM have used e-cigarettes in this way since 2012 and typically provide around 400 free e-cigarette starter packs each month. In about 30% of cases the smokers find that the provision of a free e-cigarette starter pack, given with the intention to support temporary abstinence on admission is so effective that they decide to continue using it and do not return to smoking.</p> <p>In 2019 ASH conducted a survey of mental health trusts which found that 42% of mental health trusts in England provide free e-cigarettes to adult smokers on admission to hospital to support temporary abstinence, and as such we believe there is ample evidence to support this consensus practice.<sup>9</sup></p> <p>Here in the North East, both mental health trusts (Cumbria, Northumberland, Tyne and Wear and Tees, Esk Wear Valley) provide free e-cigarettes.</p> <p>More generally in this section of the guidance, we think a distinction should be made between</p>

Stakeholder	Document	Page No	Line No	Comments	Developer's response
				<p>Despite the lack of evidence specific to pregnancy at the current time, advice on the use of e-cigarettes in pregnancy should not be excluded from the guidance. E-cigarettes are already being used by some women as an aid to quit smoking during pregnancy, and midwifery and stop smoking practitioners are being asked for advice on their use. If they are unable to provide any advice, there is an increased risk that women may revert to smoking, which is a leading modifiable risk factor for many poor birth outcomes. That is why the Smoking in Pregnancy Challenge Group, an alliance of medical organisations such as the RCOG, RCM and RCGP, working together with charities such as the Lullaby Trust, Sands and Tommys and also with Fresh has produced peer reviewed resources for healthcare professionals and pregnant women on use of e-cigarettes.<sup>12</sup> These resources are widely used and are regularly updated in line with the evolving evidence base.</p> <p>Therefore, after the section on 'Nicotine replacement therapy and other pharmacological support' (pages 50 line 8 to 51 line 5) a section should be added headed 'Use of e-cigarettes in pregnancy'. This should state that "If a pregnant woman has chosen to use an e-cigarette to quit or to reduce the</p>

Stakeholder	Document	Page No	Line No	Comments	Developer's response
				<p>Related to this point, the National Training Standard is mentioned in 1.12 (in a rather non-specific manner) and again under Quitlines (1.12.20). However, section 1.23, line 12-26, 'Those who advise people to stop smoking' fails to include any mention of the Standard. While the subtitle may suggest this section is specific to those who identify smokers and prompt quit attempts (i.e. deliver VBA), there is nothing further in this section on training for those who deliver ongoing stop smoking support (i.e. behavioural support), as has been the case in previous versions of the document. At minimum this should be included for stop smoking services. The wording found in the 2018 NG92 recommendation on this subject served this purpose. The key being 1) stop smoking support is provided by trained staff and 2) that training be consistent with the National Training Standard. Given the level of depth the document goes into for maternity care and closed institutions, there should be at least the equivalent depth provided for all settings (stop smoking services, maternity care, closed institutions, primary care) who are delivering stop smoking support. This should consist of the National Training Standard as default, plus additional training for those</p>

				<p>working with specific population such as mental health and pregnancy.</p> <p>Overall, there is little said in the new NICE guidance on stop smoking services and stop smoking support delivered in other settings compared to previous guidance documents. There is also a level of specificity in some sections that is not consistently applied in the document (e.g. lots of detail in maternity care section and smokeless tobacco and only a few bullets on other important areas of practice). This risks making the document less clear and less user friendly than previous NICE guidance.</p> <p>18 Brose L, West R, Michie S, McEwen A. Changes in success rates of smoking cessation treatment associated with take up of a national evidence-based training programme. Preventive Medicine 2014;69C:1-4</p>	
Fresh and Balance	Guideline	075	007 - 013	<p>We suggest considering the addition of two further points regarding recommendations for further research into relapse prevention. Firstly, we see a clear need for more research on varenicline for relapse prevention, given the committee acknowledges its likelihood of increasing long-term abstinence and supporting Cochrane evidence.19 Secondly,</p>	<p>Thank you. Research recommendations in NICE guidelines are specifically to address gaps in the research that the committee considered while making their recommendations. They do not address general gaps in the evidence.</p>

Social Care Partnership				advance and evolve, therefore it is important that within the guidelines there is a generic recommendation that research outcomes are considered.	function which explores if there is any new evidence to contradict, reinforce or clarify guideline recommendations. Surveillance also identifies new interventions that may need to be considered within a guideline and explores changes in context that may mean modifications are needed, for example, changes in policy, infrastructure, legislation or costs. A proactive approach is taken that includes reacting to events at any time after guideline publication (for example, publication of a key study).
Greater Manchester Health and Social Care Partnership	Guideline	General	General	There is a concern that the financial incentives for quitting smoking are not identified as an effective intervention within the general population. There is a level of evidence to support the effectiveness of the people which smoke as well as pregnant women which has been highlighted throughout.	Thank you for your comment. Incentives were only considered in pregnant women. Incentives for other populations is outside the scope of this update. Please see the <a href="#">scope document</a> on the NICE website.
Greater Manchester Health and Social Care Partnership	Guideline	General	General	The draft guidance does not seem to outline what standard Stop Smoking support is without incentive scheme. It is support up to 12 weeks quit, NRT up to 12 weeks quit and that's it. The GM Incentive runs to 3 Months Post-Partum (3MPP) some only run to birth. This is key as evidence suggests women relapse in the third trimester.	Thank you for your comment. The committee did not see evidence as part of this update that enabled them to determine an appropriate length for stop smoking support. Evidence from new trials will be considered by the NICE surveillance team when they monitor the need for updating this guideline.

**25 June to 6 August 2021**

Stakeholder	Document	Page No	Line No	Comments	Developer's response
				Evidence from a Cochrane review 2019, shows that providing incentives into the postnatal period is effective for supporting women to stay smoke free. In addition to this, we, the Greater Manchester Health and Social Care Partnership are currently awaiting publication of an RCT looking at provision of incentives for 1-year post-partum.	
Greater Manchester Health and Social Care Partnership	Guideline	General	General	<p>Incentives are not rewards so to change behaviour and reach a milestone we need to be careful about the terminology.</p> <p>Incentives should be given out at regulated intervals to ensure compliance remains with the quit attempt, identify those who relapse to ensure they are reverted back onto the high maternity risk pathway inc, scans to ensure the baby is observed for sign of foetal growth restriction and to also enable CO validating – we should not be taking self-reporting in pregnancy – no incentives should be given without CO validation as this is public funding.</p> <p>We endorse incentives in the post-partum period as a minimum for 3 months – to prevent relapse. Note that GMHSCP is awaiting the results for an RCT on post-partum incentives running up to 12 months being led by the University of Stirling.</p>	<p>Thank you for your comment. The Public Health Advisory Committee (PHAC) has considered your comment and have changed the wording of the recommendation from rewards to incentives. Recommendation 1.20.12 highlights that incentives should be staggered until at least the end of pregnancy and are conditional on confirmation of abstinence validated by biochemical methods for example carbon monoxide test with a reading of less than 4 ppm.bv. This recommendation also outlines that women who have relapsed or where the pregnancy does not continue should not be excluded from continuing to take part in the scheme and try again. Recommendation 1.20.12 (bullet 3) specifies that incentives should be staggered until 'at least the end of pregnancy'.</p>

Association (IBVTA)				While the inclusion of e-cigarettes as a recognised quit smoking intervention in a NICE guideline will go some way to redressing this misperception, that more needs to be done to educate both the UK public and health professionals cannot be overstated.	1.11.4) and recommends that those providing stop-smoking support or advice ensure that nicotine-containing e-cigarettes are an option accessible to adults who smoke (recommendation 1.12.1). Recommendations 1.12.13 to 1.12.17 outline advice to be provided on nicotine-containing e-cigarettes and is aimed at people providing stop-smoking support or advice and highlights that the use of e-cigarettes is likely to be substantially less harmful than smoking. The Public Health Advisory Committee (PHAC) acknowledge the lack of evidence regarding e-cigarettes and have developed seven research recommendations focused on e-cigarettes with the hope of stimulating further research in this area.
Independent British Vape Trade Association (IBVTA)	Guideline	029	025	The amendment of PH48 recommendation 3 is not specific that the options for recommendation have changed, which may go unnoticed. Suggest change to, "Provide information about the different types of stop-smoking options, including pharmacotherapies and e-cigarettes, and how to use them."	Thank you for your comment. At the beginning of section 1.12 'Stop smoking interventions' it is noted that the recommendations apply to people providing stop smoking support or advice. The recommendations in section 1.14 to which you refer are intended for health care professionals, stop smoking advisers and others trained to provide behavioural support to stop smoking. It is assumed that the audience will read all sections relevant to

					their practice and that the recommendations will not be considered in isolation.
Independent British Vape Trade Association (IBVTA)	Guideline	032	006 - 010	It seems that those who have to stop smoking temporarily to use acute and mental health services are only recommended to use medicinally licensed products, and that 2013 PH48 recommendation 3 is implemented without the 2021 revision being applied, as in other instances. The absence of evidence that unlicensed nicotine replacement products such as e-cigarettes are effective in these circumstances potentially hides the "common sense" rationale that enables their recommendation. They have been shown to be at least as effective as medicinally licensed NRT in other scenarios, so there can be little doubt that they will be effective in this one.	Thank you for your comment. The evidence on the use of nicotine containing e-cigarettes to support temporary abstinence was not reviewed as part of this guideline update and therefore recommendations have not been made in this area.
Independent British Vape Trade Association (IBVTA)	Guideline	033	015 - 017	We are concerned that this recommendation may discourage hospital pharmacies from stocking unlicensed NRT products such as e-cigarettes and e-liquid before the next review of the guideline. In the absence of medicinally licensed products in this category, would it be possible to recommend that hospital pharmacies carry stocks of e-cigarettes and associated consumables if they are known to be effective and meet UK regulations?	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
Johnson & Johnson Limited	Guideline	General	General	<p>Johnson &amp; Johnson Ltd welcomes the opportunity to comment on these draft guidelines. The health consequences of smoking tobacco have been extensively researched. Despite progress in recent years, smoking remains a leading cause of ill-health, early death and health inequalities. 7.2 million people in the UK still smoke. Smoking is linked to half a million hospital admissions annually and around 77,800 people die from smoking-related diseases in England every year (1). Smoking is also the attributed cause of 72% of the UK's lung cancer cases (2)</p> <p>Smoking is a major economic burden on the UK with smoking-related illnesses costing the NHS in England an estimated £2.5 billion (3) each year. The Covid-19 pandemic has put an even greater spotlight and urgency on the need for people to quit smoking, with Public Health England reporting that smokers are at greater risk of severe respiratory disease from Covid-19 (4). We therefore strongly welcome the Government's commitment – set out in the 2019 Prevention Green Paper - to go 'smoke-free' in England by 2030, and we support guidelines for healthcare professionals and</p>	Thank you for your comment.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
				<p>The elimination of nicotine use can be a challenging task for users. It is therefore likely that NRT, targeting a tobacco and nicotine free outcome, will have a lower success rate than interventions that do not seek to eliminate nicotine. Continuing to use nicotine may expose users to risks that those who eliminate it will not be exposed to. The Committee concluded [page 80, lines 15 – 17] <i>“with the limited data on effects of longer-term use, people should only use e-cigarettes for as long as they help prevent them going back to smoking.”</i></p> <p>Advising smokers that long or short acting NRT is “less likely to result in successfully stopping smoking” compared to e-cigarettes, does not take into account the very limited amount of evidence. Nor does it take into account that comparisons are made of data which use two different treatment strategies, with differing endpoints and differing residual risk.</p> <p>1 Hajek P et al. N Eng J Med 2019;380:629-636</p>

				should stop using nicotine-containing e-cigarettes when they are ready to do so, as is usually the case for licensed NRT products. Further guidance should be provided for those providing cessation advice on how people should stop using e-cigarettes. We would also recommend the guidance endorses follow-up sessions for those using nicotine-containing e-cigarettes at a defined point (e.g. after X months) with a stop-smoking advisor to review progress and discuss how to stop using the e-cigarette if the individual is ready to do so.	how to stop using nicotine containing e-cigarettes when the person is ready to do so.  Regarding follow up sessions at a defined point, the committee has provided as much detail as it can given the evidence it has reviewed. The committee's discussion is summarised in the rationale and impact section relating to this recommendation.
Johnson & Johnson Limited	Guideline	038	010 - 022	The information specified in this section refers to the requirements for manufacturing information of medically licensed products. While there are no e-cigarettes currently licensed and marketed as medicines in the UK, similar guidance on informing about dosage, health risks and long-term use of e-cigarettes should be provided, to avoid gaps in the information being made available.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.  As is noted in the rationale and impact section under 'nicotine containing e-cigarettes for harm reduction', no evidence was found on the use of e-cigarettes specifically for harm reduction for people who do not want, or are not ready, to stop smoking in one go. So, the committee chose not to make recommendations on using e-cigarettes for harm reduction.

				account that comparisons are made of data which use two different treatment strategies, with differing endpoints and differing residual risk.  1 Hajek P et al. N Eng J Med 2019;380:629-636	
Johnson & Johnson Limited	Guideline	081	001 - 023	We recognise the importance of stop-smoking support being available to all, and that people with mental health conditions should not be treated differently. We suggest the guidance should also recognise that people with mental health conditions smoke significantly more on average and have higher levels of nicotine dependence than the population as a whole. <sup>1</sup> This may result in underdosing using nicotine replacement therapy. We suggest guidance should include "Advise how to use NRT correctly, including how to get a high enough dose of nicotine to control cravings, prevent compensatory smoking and stop successfully.  1. <a href="https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/779497/SF_MH_services_in_England_Guidance_for_Providers.pdf">https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/779497/SF_MH_services_in_England_Guidance_for_Providers.pdf</a>	Thank you. The guideline makes recommendations for those utilising mental health services and those with mental health conditions throughout, thus acknowledging this group as key. Recommendation 1.15.13 is quite specific in this regard referencing people with mental illness as a group where smoking is widespread, and many are possibly dependent on tobacco and recommendation 1.22.4 specifying the need to prioritise groups at high risk of tobacco-related harm which specifies people with mental health conditions. Further the committee developed a research recommendation regarding support for people with mental health conditions to stop smoking and the rationale and impact sections for recommendation 1.14.9 and others outline the points you raised regarding increased risk. In terms of advice to use stop-smoking interventions correctly and other advice this is covered specifically in this

				misperceptions about the relative harm of e-cigarettes.	is about discussing these two separate products (e-cigarettes and tobacco products) as distinct within this curriculum.
King's College London – Nicotine Research Group	Guideline	013	005	We support the goal to make e-cigarettes undesirable to children, and young people. The recommendation that <i>'everyone working in and with primary and secondary schools and further education colleges .....When discussing e-cigarettes, make it clear why children, young people .....who do not smoke should avoid e-cigarettes to avoid inadvertently making them desirable'</i> , requires a skilled and competent workforce otherwise it may actually have the effect of making them desirable. We have seen the approach taken by countries such as the US towards informing children and young people about the 'dangers' of vaping has made them inadvertently more attractive.	Thank you for your comment. The committee agree with your comment and the rationale and impact section (p.76, lines 5 to 22) specify that the committee wanted to discourage e-cigarette use among young people and young adults who do not smoke because evidence shows that use of e-cigarettes is linked with a higher chance of ever smoking later in life. Further the committee agreed that school-based interventions could help to discourage e-cigarette use among those who do not smoke and noted the need to not inadvertently make e-cigarettes desirable. Recommendation 1.6.6 outlines that smoking prevention interventions should be delivered by teachers and higher-level teaching assistants who are both credible and competent in the subject, or by external experts. The guideline acknowledges the importance of training and it makes a number of training specific recommendations (1.23). Recommendation 1.23.1 outlines that those with responsibility for improving the health and wellbeing of children, young people and young adults who attend school, work in

				into account when implementing any of the recommendations in the guidance and the most up to date evidence is used (eg Cochrane reviews) to guide policy and practice. The Cochrane living systematic review on e-cigarettes [1] is a good example of where to find the most up to date evidence on e-cigarettes for cessation and harm reduction. 1, Hartmann-Boyce J, et al (2021) Electronic cigarettes for smoking cessation. Cochrane Database of Systematic Reviews 2021, Issue 4. Art. No.: CD010216. DOI: 10.1002/14651858.CD010216.pub5.	
King's College London – Nicotine Research Group	Guideline	023	005 026 026	It's encouraging to see that the recommendation that as well as licensed smoking cessation aids, nicotine containing e-cigarettes should also be accessible, and can help people successfully stop smoking. We believe there will be a cost implication to truly making e-cigarettes accessible by stop smoking services and also within secondary care mental health settings. For example, only 11% of community stop smoking services provide e-cigarettes as part of their cessation offer. [2] 2.Action on Smoking and Health (ASH), Progress towards smokefree mental health services: findings from a survey of mental	Thank you for your comment. E-cigarettes are one option recommended be accessible to adults amongst other options which include medically licensed products, behavioural support, and brief advice. NICE guidelines are developed by its Public Health Advisory Committee (PHAC) based on systematic reviews of the evidence and expert testimony. They set out the care and services suitable for most people with a specific condition or need, and people in particular circumstances or settings. People have the right to be able to make informed decisions about their care. Our guidance should be considered when making decisions with them. It is beyond NICE's remit to make

				health trusts in England. 2019, Action on Smoking and Health (ASH): London	commissioning or funding decisions and these should rightly occur at the local commissioning level.
King's College London – Nicotine Research Group	Guideline	026	008 - 010	These recommendations – ‘to discuss.....using (e-cigarettes) for long enough to prevent a return to smoking, and how to stop using them when they are ready to do so’ are important but lack an evidence base to guide practitioners to recommend how long is ‘long enough’ and how to stop vaping without relapsing back to smoking. New education materials/resources are needed for practitioners and e-cigarette users.	Thank you for your comment. The committee agreed with your comment and have outlined research recommendations to stimulate research in these areas specifically: Research recommendation 7 (Use of e-cigarettes (amount and frequency)); 11 Relapse prevention. Recommendation 1.12.13 provides examples of education materials and resources regarding e-cigarettes to facilitate people providing stop-smoking support or advice to give clear, consistent, and up-to-date information about nicotine- containing e-cigarettes.
King's College London – Nicotine Research Group	Guideline	026	015 - 017	Explain to people who choose to use nicotine-containing e-cigarettes the importance of getting enough nicotine to overcome withdrawal symptoms, and explain how to get enough nicotine. Again, these are helpful recommendations in order to maximise the benefit of e-cigarettes but require new education materials/resources to be developed for practitioners and e-cigarette users.	Thank you for your comment. Recommendation 1.12.13 provides examples of education materials and resources regarding e-cigarettes to facilitate people providing stop-smoking support or advice to give clear, consistent, and up-to-date information about nicotine- containing e-cigarettes.
King's College London –	Guideline	028	010	In this section (Info on stopping smoking for those using acute, maternity and mental health services) there is an opportunity to add	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update.

NHS Foundation Trust		032	001 - 021	<p>For those who have to abstain temporarily to use acute and mental health services</p> <p>There is an omission of the use of e-cigarettes to address the needs of people who need to stop smoking temporarily during a hospital admission. This does not reflect the needs of people admitted to a mental health inpatient unit, who must abstain from smoking during lengthy admission periods. E-cigarettes are an important component of managing dependency in those being cared for in mental health environments. In this respect the guidance does not reflect the experiential learning of mental health Trusts in relation to the use of e-cigarettes, widely used as a key part of managing nicotine dependence.</p> <p>We are concerned that the omission of e-cigarettes as a recognised aid to support abstinence in an inpatient mental health setting will exacerbate the existing inequalities that people with SMI experience. This will happen by reducing the options for products to support individuals and therefore reducing the likelihood that they will engage with the idea of stopping smoking.</p> <p>A further consequence would be the likely failure of mental health Trusts to achieve</p>	reviewed as part of this guideline update and therefore recommendations have not been made in this area. e.

Leicester City Council	Guideline	010	005 - 006	Rec 1.4 – This recommendation could be difficult to implement as the Academy status of schools means that many schools are able to create their own smoke free policies so across a single local authority there could be a number of differing smoke free policies, which may not be consistent with local public health policy advice.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
Leicester City Council	Guideline	010	016	Rec 1.5 – there is an opportunity here to include guidance on supporting young people who do breach smokefree rules within their school to access advice and support to become smoke free.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
Leicester City Council	Guideline	010	016	Rec 1.5 – It would be helpful to include guidance on where staff training and development can be accessed so that this comes from a reputable and nationally accredited source, and avoids misinformation being delivered.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
Leicester City Council	Guideline	012	013	Rec 1.6 – we could not see any reference to second-hand smoke and felt that this should be included in any teaching on smoking and tobacco use.	Thank you for your comment. The guideline does acknowledge the risk posed by second hand smoke with recommendations outlining the need to raise public awareness of the harm of second hand smoke in the context of using medicinally licensed nicotine-containing products (1.8.1); the provision of clear advice regarding the danger of second hand smoke for those using acute, maternity and mental health services (1.14.1) and during contact

Stakeholder	Document	Page No	Line No	Comments	Developer's response
					with partners, parents and other household members of people using acute, maternity and mental health services when identifying smoking (1.11.11); and in the context of the development of policy for smokefree grounds (1.21.2); and when training those who advise people how to stop smoking (1.23.4 and 1.23.11).
Leicester City Council	Guideline	013	005 - 007	Rec 1.6.4 – we agree with the content of this recommendation but would also like to see an addition to reflect that, for those who do smoke, e-cigarettes can be a valuable harm-reduced quitting aid. We feel it is important that young people, who may have parents and carers who smoke, are equipped with the knowledge that (in the circumstance of being used as a quitting aid) they are less harmful than tobacco smoking.	Thank you for your comment. Recommendations in 1.6 are focused on preventing children, young people, and young adults from taking up smoking. The committee were clear that they did not want to say anything that might promote the use of e-cigarettes in under 18s.
Leicester City Council	Guideline	044	015 - 017	Rec 1.17.1 – although the service delivery model has changed due to COVID restrictions (and the new service delivery model looks likely to remain longer term) this recommendation does feel achievable with 'tweaks' to how advisors deliver their relapse prevention session. It may for example involve provision of a specific "what ifs" type resource to highlight high risk situations and how they can be managed, tailored to individual service users situations.	Thank you for your comment. The committee recognises the challenges to practice resulting from the Covid-19 pandemic. The rationale and impact sections of the guidance has noted where the pandemic may have temporarily impacted on practice. However, the committee noted that it could not make recommendations based on such changes to practice as it has not reviewed evidence in this area.

Tobacco: preventing uptake, promoting quitting and treating dependence (update)

**Consultation on draft guideline - Stakeholder comments table**  
**25 June to 6 August 2021**

Stakeholder	Document	Page No	Line No	Comments	Developer's response
Leicester City Council	Guideline	044	018 - 019	Rec 1.17.2 – we felt that some clarity is needed around how individual services should manage this due to potential cost implications, i.e. after the initial 12 week supply should clients be provided with a further course of medication via their GP on prescription, or entered back into the service as a new episode?	The committee has made recommendations based on evidence of effectiveness and cost-effectiveness. Resourcing the implementation of the recommendations is outside of the committee's remit and is for local commissioners.
Leicester City Council	Guideline	049	009 - 010	Rec 1.20.6 – we felt that e-cigarettes should be included alongside NRT here as a first line of treatment option. Many pregnant women struggle to use the oral NRT products and find vaping devices are the key to quitting, but without clear guidance that this is a viable first line of treatment it could (and does) put women off trying them.	Thank you. The committee did not find any evidence to support the use of nicotine containing e-cigarettes during pregnancy as described in the rationale and impact section for these recommendations, and did not make any recommendations regarding this. The committee have made a series of research recommendation regarding nicotine containing e-cigarettes and pregnancy to stimulate research in this area.
Leicester City Council	Guideline	050	015 - 020	Rec 1.20.8 – this could be elaborated to include "Give clear, consistent and updated information on safety/handling of e-cigarettes"	Thank you. As described in the rationale and impact section for these recommendations, the committee found no evidence to support the use of nicotine containing e-cigarettes during pregnancy and therefore was unable to recommend them. The committee have made a series of research recommendation regarding nicotine containing e-cigarettes and pregnancy to stimulate research in this area.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
Leicester City Council	Guideline	051	008 - 021	Rec 1.20.12 – Could provision of an e-cigarette starter pack/e-liquids be included here as an incentive?	Thank you. The committee did not see any evidence that an e-cigarette starter pack/e-liquids was an effective incentive.
Leicester City Council	Guideline	057	006 - 008	Rec 1.22.2 – Clarity is needed on whether this recommendation is referring to community services or referrals back to primary care as there are cost implications to longer term service provision for community providers with limited budgets. Should a cut off point be recommended whereby if a client has not quit/made improvements to their smoking behaviours by e.g. 4 weeks they may need to take a break and return when they are able to commit more fully?	Thank you. The committee did not see any evidence for an effective cut off point and agreed this would vary from person to person. They were clear that support should be provided for as long as a person needs it.
Leicester City Council	Guideline	059	010 - 011	Red 1.22.14 – this is working well in many areas – clarity needed on whether this recommendation includes e-cigarettes or is it referring only to NRT products?	Thank you. Nicotine containing products is defined in the glossary section of the guideline. The definition of nicotine containing products has been amended to clarify that it includes nicotine containing e-cigarettes.
London Borough of Barnet	Evidence Review F	076	008 - 010	This link is tenuous looking at the evidence and studies with low confidence and certainty intervals (see studies quoted in appendix). It will drive educational settings and practitioners to give the message “ e-cigarettes are bad”.	Thank you for your comment. The evidence utilised in the development of this guideline has been identified and appraised in line with NICE's methods and process manual. The evidence along with expert testimony and the contributions of co-opted expert members to the committee has been utilised by the public health advisory

Stakeholder	Document	Page No	Line No	Comments	Developer's response
					<p>committee (PHAC) to develop the NICE tobacco guideline.</p> <p>The guideline specifies in recommendation 1.6.3 and 1.6.4 that in children, young people and young adults who do not smoke experimenting with or regularly using e-cigarettes should be discouraged, and e-cigarettes should be avoided to avoid making them inadvertently desirable. The committee wanted to discourage e-cigarette use among young people and young adults who do not smoke because evidence shows that use of e-cigarettes is linked with a higher chance of ever smoking later in life. Although there was no evidence about children, committee members agreed that ideas about smoking and what is normal can start from a young age so the recommendation should also apply to this age group. Recommendation 1.12.1 includes nicotine-containing e-cigarettes among the options that should be accessible to adults who smoke.</p>
London Borough of Barnet	Evidence Review J	019	Table 5	1.20.6 Evidence review suggests the there is moderate evidence that NRT+ Behavioural support gives good outcome- why are we using the word "consider" – broadly should this be "discuss NRT and behavioural support"	<p>Thank you for your comment. NICE uses 'consider' to reflect a recommendation for which the evidence of benefit is less certain (rather than an 'offer' recommendation which would reflect a strong recommendation, usually where there is clear evidence of</p>

					benefit) and reflects the PHAC's deliberations and the consideration of the moderate evidence identified and other expert testimony in line with the NICE methods and process manual.
London Borough of Barnet	Guideline	013	001 - 007	1.6.4 We agree that discussion around e-cigarettes in this setting need to be separate, but surely we must recognise that e-cigarette awareness will support CYP knowledge that this is a route out of smoking, both for themselves, their peers and families. The risk here is that making it so far removed from smoking means it ceases to become a cognitive link to stopping smoking, should be discussed in context of "if smoking regularly, offers route out of smoking".	Thank you for your comment. The preceding recommendation 1.6.3 highlights that "as part of the curriculum on tobacco, alcohol and drug misuse, discourage children, young people and young adults who do not smoke from experimenting with or regularly using e-cigarettes." The recommendation goes on to state that e-cigarettes be spoken about separately from tobacco products. So e-cigarettes will be discussed in the context of a tobacco, alcohol and drug misuse but as something separate from tobacco so that e-cigarettes could not be confused with tobacco. The rational and impact section outlines the committee discussion regarding this recommendation and they wanted to discourage e-cigarette use among young people and young adults who do not smoke because evidence shows that use of e-cigarettes is linked with a higher chance of ever smoking later in life. Although there was no evidence about children, committee members agreed that ideas about smoking and what is normal can start from a young

Stakeholder	Document	Page No	Line No	Comments	Developer's response
					age so the recommendation should also apply to this age group. The committee agreed that school-based interventions could help to discourage e-cigarette use among those who do not smoke and noted the need to not inadvertently make e-cigarettes desirable.
London Borough of Barnet	Guideline	023	017 - 019	1.12.4 This guidance is in direct conflict with the legal position and the scope of this documents use. Legally under 18yr olds cannot buy E-cigarettes, and medicolegally to advise an under 18yr old in e-cigarette may cause consternation/concern in many people. How do we align that we KNOW e-cigarette use would be less harmful than continuing to smoke, and CONVEY this to a under 18 year old without breaching legal parameters? The scope of the NICE guidance is to support smokers to stop, prevent them starting, reduce harm from "aged 12 and up" and yet here, there is a disparity.	Thank you for your comment. The guideline is not in conflict with the legal position and does not recommend the sale or use of e-cigarettes by young people under the age of 18. The Public Health Advisory Committee (PHAC) discussed your comment and outlined that all the recommendations apply to those aged 12 or over unless otherwise specified. E-cigarettes cannot be purchased by people under the age of 18 and recommendation 1.12.1 specifies "ensure the following are accessible to adults who smoke with reference to interventions outlined including 'nicotine-containing e-cigarettes'". On this basis the PHAC considered the recommendations sufficiently clear and made no changes. Despite the above, we have amended the statement prefatory to recommendations 1.12.13-1.12.17 to clarify that these recommendations are for people providing stop-smoking support or advice relating to the use of e-cigarettes by adults.

London Borough of Barnet	Guideline	023	005	1.12.1 The barriers to offering the nicotine-containing e-cigarettes are many, and well documented. How will the NICE guidance and implementation of them, support the roll out? How will the clinical reticence from HCP in a variety of settings be addressed and worries assuaged? A public facing and HCP facing campaign will be integral. In line with this advice many LA Stop Smoking Services will be looking for ways to include this into their offer, how will they do this without PHE support/guidance given risk averse nature, political sway and concerns re breaching article 5.3 of WHO FCTC?	Thank you for your comment. It is beyond NICE's remit to make commissioning decisions and these should occur at the local commissioning level. As noted in the guideline, there are currently no licensed nicotine containing e-cigarettes.
London Borough of Barnet	Guideline	023	026	1.12.5 The barriers to offering the nicotine-containing e-cigarettes are many, and well documented. How will the NICE guidance and implementation of them, support the roll out? How will the clinical reticence from HCP in a variety of settings be addressed and worries assuaged? A public facing and HCP facing campaign will be integral. In line with this advice many LA Stop Smoking Services will be looking for ways to include this into their offer, how will they do this without PHE support/guidance given risk averse nature, political sway and concerns re breaching article 5.3 of WHO FCTC?	Thank you for your comment. NICE guidelines are evidence-based recommendations for health and care in England. They set out the care and services suitable for most people with a specific condition or need, and people in particular circumstances or settings. People have the right to be able to make informed decisions about their care. Our guidance should be considered when making decisions with them. It is beyond NICE's remit to make commissioning decisions and these should rightly occur at the local commissioning level.

London Borough of Barnet	Guideline	025	021 - 024	1.12.13 This will require a concerted information campaign for Public, HCP, stakeholders- without that, this message will be lost and we will continue to have smokers needlessly dying.	Thank you for your comment. Recommendations 1.9 focuses on promoting stop-smoking support and makes recommendations regarding co-ordinating communication strategies to support the delivery of stop-smoking support, stop-smoking Quitlines and other activities designed to help people stop smoking. It includes developing and delivering communications strategies about stopping smoking in partnership with the NHS, national, regional, and local government and non-governmental organisations and specific recommendations to employers and others to raise awareness to help people stop smoking which would raise awareness in the groups you outlined. Coupled with this are recommendations on policy (1.21), commissioning (1.22) and training (1.23) directing those with responsibility for developing smokefree policy, and for commissioning and training services to take action with opportunities to raise awareness through these processes.
London Borough of Barnet	Guideline	046	012 - 017	1.18.2 We think another bullet point needs to be added – to cover SecondHand Smoke exposure	Thank you. The committee did not consider the evidence for second hand smoke exposure and therefore were unable to make recommendations about it.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
London Borough of Barnet	Guideline	050	009 - 010	1.20.6 Evidence review suggests the there is moderate evidence that NRT+ Behavioural support gives good outcome- why are we using the work “consider” – broadly should this be “discuss NRT and behavioural support”	Thank you. The committee discussion section of the evidence review explains that the committee found the evidence to be unconvincing in this area and expected a larger effect than they saw. Much of the evidence was of low quality or not statistically significant. The committee discussed the evidence alongside their own experience and expertise and agreed that a recommendation to consider adding NRT to behavioural support was an appropriate recommendation.
London Borough of Barnet	Guideline	051	008 - 021	1.20.12 We assume there will be a overarching piece of funding available for LA? This is not part if NHS LTP funding and as such this offering of incentives will create an inequity of service for those offered support via Hospital as opposed to those supported in community.	Thank you. The recommendations are based on the evidence of effectiveness, and the implementation of the recommendations is primarily a local commissioning decision.
London Borough of Barnet	Guideline	057	006 - 008	1.22.2 Whilst the 12 week model is gold standard, it would be useful to know how this and providing NRT and support beyond (“for as long as is needed”) will be achieved in the context of ever shrinking public purse and non ring fenced budgets.....	Thank you. The committee did not see any evidence for an effective cut off point and agreed this would vary from person to person. They were clear that support should be provided for as long as a person needs it.
Medicines and Prescribing Team	Guideline	General	General	I found that navigating back and for the through the guideline with the internal links didn't always bring me back to the page I was reading, which could be a bit confusing. Please double check all these when it goes to	Internal comment – Editors check all hyperlinks before publication.

Modern Health Group /Evapo	Guideline	025 - 026	025 -	1.12.14 – 1.12.17 Clinicians should understand the role nicotine plays in ensuring a successful switch attempt. Offering clear guidance on nicotine strength will prevent relapse and help adult smokers find the right nicotine concentration to mirror the nicotine levels delivered through their use of combustible cigarettes. It is often better to start on a higher strength to first ensure all cravings are satisfied and reduce the risk of falling back to smoking.	Thank you for your comment. Recommendation 1.12.13 to 1.12.17 are for people providing stop-smoking advice which would include clinicians. Recommendation 1.12.17 outlines that those providing advice should “explain to people who choose to use nicotine-containing e-cigarettes the importance of getting enough nicotine to overcome withdrawal symptoms and explain how to get enough nicotine”. This is discussed further in the ‘Rationale and Impact’ section of the guideline (p.80) where committee discussion on the role of nicotine and the impacts of not getting enough nicotine on quit attempts are outlined and that “people should be encouraged to use as much as they need and told how to use the products effectively”
Modern Health Group /Evapo	Guideline	022 - 023	024	We support new guidance which would add e-cigarettes to the list of possible interventions that are to be made accessible to smokers. An ASH survey of tobacco control leads found that only 11% of local authority stop smoking services offered e-cigarettes to some or all people making a quit attempt (PHE, Vaping in England: 2021 evidence update summary, February 2021 Link). Nearly two thirds (68%) of vapers say that they never thought they would quit smoking until	Thank you for your comments. The committee agreed that e-cigarettes are one of many tools to help individuals with quit attempts.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
				<p>vaping came along (OnePoll, 2019 Link) and in one year alone, PHE identified that over 50,000 smokers quit cigarettes with the help of a vaping (STS Survey, PHE, 2021 evidence update summary, February 2021 Link). There are now approximately 2m smokers who have successfully quit in the UK using e-cigarettes. For this number to continue to increase however, stop-smoking interventions must be able to deliver consistent and effective guidance on attempts to quit combustible tobacco. This must include offering a range of options to those looking to quit and should include e-cigarettes as the most effective, less harmful alternative.</p> <p>We note with concern the recent comments by the World Health Organisation (WHO) which described e-cigarettes as 'harmful'. Whilst we agree that regulation concerning e-cigarettes could be enhanced, this should be evidence-based, fair and proportionate. The fundamental difference between the UK and the WHO is that the UK has taken a science and evidence-led approach towards tobacco harm reduction. The evidence clearly shows the enormous role vaping products play in helping smokers to quit and move away from smoking for good. Public Health England confirms that</p>

				Surveys show that many GPs still believe that nicotine is causing cancer which is of course incorrect. The combustion of tobacco is causing all the smoking related diseases. Smokers smoke for the nicotine but die from the tar. E-cigarettes are sidestepping the combustion, but still satisfy the nicotine cravings. There should be mandatory courses for GPs and health care professionals on offer to help with education around e-cigarettes.	
Modern Health Group /Evapo	Guideline	074	001 - 004	<p>There are several factors that determine nicotine delivery to the user. These include the nicotine concentration of the e-liquid; the e-liquid formulation; the heating temperature; and the user behaviour (how many puffs; how deep, how often etc). The delivery of nicotine is therefore the result of the interplay of these factors and regulating nicotine delivery based on one factor alone may shift the dynamics of the other factors.</p> <p>For e-cigarettes to compete with combustible cigarettes and provide a satisfactory alternative to those looking to switching, they must provide a comparably satisfying nicotine effect and experience. Regulating e-cigarettes to ensure they can deliver nicotine competitively with a combustible cigarette will involve achieving the right balance between</p>	Thank you for your comment

				these factors while minimising modifiable risks from e-cigarettes.	
Modern Health Group /Evapo	Guideline	074	005 - 008	Academics and tobacco harm reduction experts have rightly highlighted the critical role that flavours play in supporting those switching from smoking to vaping and preventing relapse. Adult smokers should have access to a full range of flavours to ensure that they do not turn to illegal products or relapse to smoking, as evidence suggests. (ASH, Use of e-cigarettes (vapes) among adults in Great Britain, 2020 Link p8). This is a conclusion which is supported by a vast body of scientific evidence. Furthermore, steps can be taken to ensure products are not youth-appealing. Through explicitly banning cartoons and youth-appealing iconography, and restricting flavour names/descriptors that may disproportionately appeal to underage users. These steps should help promote the responsible manufacturing and sale of e-liquids, whilst not limiting brand creativity.	Thank you for your comment
Modern Health Group /Evapo	Guideline	074	009 - 011	The latest PHE data has found that 'most young people who had never smoked had also never vaped. Between 0.8% and 1.3% of young people who had never smoked were current vapers' and that 'most current vapers were either former or current smokers.' (PHE,	Thank you for your comment

				<p>deleted. The reason given for deletion is that 'tailoring support and treatment is a general principle recommended in NICE's guideline on patient experience in adult NHS services.' We do not support this deletion.</p> <p>The National Training Standard was produced by the NCSCT on behalf of DH and includes all behaviour change techniques (BCTs) for which there is evidence of effectiveness. It does not prevent tailoring support and treatment as appropriate, therefore the rationale for deletion is not justified. "Practitioners trained to deliver interventions according to the standard have been proven to be effective in adding significant value to quit attempts (Brose L, West R, Michie S, McEwen A. Changes in success rates of smoking cessation treatment associated with take up of a national evidence-based training programme. Preventive Medicine 2014;69C:1-4). Removal of the Training Standard is likely to lead to a return to the situation prior to the establishment of the NCSCT where people provided training based on opinion, rather than the evidence, for what effective training should contain. This recommendation should therefore be reinstated.</p>

National Centre for Smoking Cessation and Training	Guideline	023	006 - 007	1.12.2 There is an opportunity here to be more specific about what very brief advice on smoking (VBA) involves: Ask, Advise and Act. This is supported by meta-analysis (Aveyard et al 2012).	Thank you for your comment. 1.12.2 is a recommendation about making sure that people are aware of the range of interventions that they can access (and how to access them). VBA is covered in 1.12.1. The Public Health Advisory Committee (PHAC) outlined that the introduction to recommendation 1.12 outlines and provides a hyperlink to training requirements (National Centre for Smoking Cessation and Training) where further details regarding very brief advice are available. PHAC noted that as these recommendations are aimed at people providing stop-smoking support or advice they would be aware of these interventions and as outlined training requirements are hyperlinked.

National Centre for Smoking Cessation and Training	Guideline	023	008 - 009	1.12.3 Behavioural support is only effective if delivered by someone trained in behavioural support and this guideline should reflect this: "Offer behavioural support from a trained practitioner to people ...."	Thank you for your comment. The introduction to recommendation 1.12 outlines and provides a hyperlink to training requirements (National Centre for Smoking Cessation and Training) where further details regarding requirements are outlined.
National Centre for Smoking Cessation and Training	Guideline	023	025	Better wording suggested: "a combination of longer-acting with shorter-acting NRT."	Thank you for your comments. This guideline has been through NICE's editorial process and conforms to its standards. The Public Health Advisory Committee (PHAC) considered your comments and have not made the suggested change on this basis.
National Centre for Smoking Cessation and Training	Guideline	025	014 - 018	For more dependent smokers, replacing 'each cigarette with the product they are using' could exceed recommended daily doses. It may be useful to provide examples of using combination NRT given that this is the recommendation made in 1.12.5	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
National Centre for Smoking Cessation and Training	Guideline	025	010	Should say: "manage urges to smoke."	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
National Centre for Smoking Cessation	Guideline	026	008	It may not be helpful to ask an individual how long they intend to vape for. Many people when they start a quit attempt think that they should stop all nicotine use as soon as	Thank you for your comment. The rationale and impact section of the guideline outline the Public Health Advisory Committees discussion regarding this recommendation.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
and Training				possible, and only continue once they find it helps them stay smokefree. Some weeks after their initial quit date, they may see things in a different light once their confidence about not smoking grows.	The committee used their knowledge and experience to supplement the very limited and uncertain evidence about harms. The committee agreed that with the limited data on effects of longer-term use, people should only use e-cigarettes for as long as they help prevent them going back to smoking. They also agreed that people should be discouraged from continuing to smoke when using e-cigarettes, even if they are smoking less, because there is no information on whether this will reduce their harm from smoking. The committee discussed that it is more likely that people will not get enough nicotine to help them stop smoking, than get too much. They agreed that not getting enough nicotine is likely to increase the risk that the person will return to smoking, so they recommended that people should be encouraged to use as much as they need (1.12.17) and told how to use the products effectively (1.12.14)
National Centre for Smoking Cessation and Training	Guideline	026	010	If the practitioner does not know how an individual can stop vaping, this may not be helpful. The NCSCT is producing guidance on this, but in real life situations we know from clients that reducing the dose of nicotine is fairly commonplace, indicating that if an individual wants to stop vaping, it is well within	Thank you for your comment. Recommendation 1.12.13 links to NCSCT resources which includes advice on how to stop using nicotine containing e-cigarettes when the person is ready to do so.

*Comments received in the course of consultations carried out by NICE are published in the interests of openness and transparency, and to promote understanding of how recommendations are developed. Stakeholder	Document	Page No	Line No	Comments	Developer's response
				their control to do this. Stopping too early increases the risk of relapse to smoking, and longer term vaping may help to avoid this.	The second bullet point of recommendation 1.12.15 recognises your concern about the risk of relapse and recommends that nicotine containing e-cigarettes are used for long enough to prevent a return to smoking.
National Centre for Smoking Cessation and Training	Guideline	026	015	We are pleased to see the emphasis on using enough nicotine, a point which is often missed by users and healthcare workers alike.	Thank you for your comment
National Centre for Smoking Cessation and Training	Guideline	027	018 - 026	1.13.1 This section is somewhat confusing and could benefit from stressing that the best chance of quitting is with a combination of behavioural support and medication; people should be directed/referred towards wherever this is available. If a practitioner has not been trained in delivering behavioural support and stop smoking medications, then they should refer to someone who has. It is also unclear (line 24-5) why someone who opts out of wanting support to quit would be referred for pharmacotherapy and very brief advice. A note should be made in their records that they have received VBA, declined to make a quit attempt and informed that they will be asked about their smoking at the next appointment as it is a matter of concern.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.

				<p>There are a number of areas in which it would have been useful to include EC along with licensed nicotine-containing products (32.1, 33.13, 36). This would have strengthened the guidance.</p> <p>We are aware that evidence is slow to accumulate and applaud the work of researchers (Hajek, Britton, West, Brown, Hartman-Boyce, Notley, Cox, Dawkins, McNeill, Robson and others) in gathering evidence to demonstrate the benefits of EC to help people who smoke to quit, especially in the face of contrary evidence funded by investors who have an openly anti-vaping agenda, and who in fact merely protect the cigarette industry by opposing harm-reduced products.</p>	
New Nicotine Alliance (UK)	Guideline	013	005 - 007	<p>We feel the guidelines should be more prescriptive in advising on what should be said to make it clear why vaping should be avoided by non-smokers. We are concerned that the people providing this support and advice are unlikely to be sufficiently well informed about the relative risks of EC to convey this accurately, given that misperceptions about vaping and nicotine are so widespread. We think that an additional sentence should be added here, to explain that although using EC</p>	<p>Thank you for your comment. This is stated clearly elsewhere in the guideline and the committee were clear that they did not want to say anything that might promote the use of e-cigarettes in under 18s.</p>

Stakeholder	Document	Page No	Line No	Comments	Developer's response
Alliance (UK)				cartridges. The definition is misleading, because it gives prominence to disposables. Whilst disposables are gaining in popularity, most vapers – especially those with less money – use open tank systems. This definition seems to cover pod devices, not open tank systems. The definition seems to suggest that there are disposable refillable devices. To our knowledge, those do not exist (it would be pointless to have a device which could be recharged but not refilled).	
New Nicotine Alliance (UK)	Guideline	068	001	We suggest that the guidance refers to “vapes” or “vaping products” rather than to “e-cigarettes”.	Thank you. The committee and editors agreed that e-cigarettes is the most understandable term. The definition in the ‘terms used in this guideline’ section clarifies that this is also called vaping.
New Nicotine Alliance (UK)	Guideline	068	003	It is inaccurate to use “consumption” in conjunction with vaping. Vapour is inhaled - not consumed - as it is then exhaled. Only partial amounts are consumed as a proportion is also exhaled	Thank you for your comment. The Public Health Advisory Committee (PHAC) have considered your comment and this has been updated to say ‘inhaled’.
New Nicotine Alliance (UK)	Guideline	068	020	We feel it is inaccurate to state that “the benefits of harm reduction are uncertain”: harm reduction is a proven method, as shown by its historical use in other fields.	Thank you for your comment which the committee have carefully considered, however they agreed that the current definition accurately reflects their discussions.
New Nicotine	Guideline	072	009	We suggest this change (“or” to “and” and add “compared to cigarettes”:	Thank you. The committee specified no tobacco comparator as they were interested in absolute effects. Full PICO protocols for

Improvement				<p>through the yellow card system. Other MHRA updates on licensing have been included.</p> <p>Can an addendum be added bearing in mind publication will nearly be 2 year post the reported period?</p>	<p>committee were unable to ascertain whether any harms had been identified since the time of the expert testimony, but were unaware of any.</p>
NHS England and NHS Improvement	Guideline	General	General	<p>Main comments relate to the inclusion of e-cigarettes containing nicotine. Many GPs would be reluctant to advise use as a non-medical product, and the guideline is lacking in clarity about what primary care should be specifically advising. For this to work there would need to be some specific guidance around this for GPs to follow – as there is for the medical products. Primary care would be subject to complaints about incorrect advice and the default may then be just to not include advice as outside of expertise. Smoking Cessation Services are more likely to be better placed to advise on it, so a distinction between specific services and general primary care services would be helpful.</p>	<p>Thank you for your comments. Recommendation 1.12.4 outlines that people providing stop-smoking support (which would include primary care professionals) discuss options to use to stop smoking in the context of individuals preferences and circumstances, current medication, contraindications and previous experiences of stop-smoking aids. Recommendation 1.12.5 highlights that those providing stop-smoking advice should advise that nicotine-containing e-cigarettes (as well as varenicline and a combination of short-acting and long acting NRT) can result in successful quit attempts when combined with behavioural support). Recommendations 1.12.13 to 1.12.17 provide specific advice for those delivering stop-smoking support or advice regarding nicotine-containing e-cigarettes which cross refers to (with hyperlinks) NCSCT e-cigarette guide and Public Health England's information on e-cigarettes and vaping. Recommendation 1.23.2 to 1.23.15</p>

					acknowledges that training may be required for those advising people on how to stop smoking, people working in closed institutions, those working with pregnant women and those advising people how to stop using smokeless tobacco.
NHS England and NHS Improvement	Guideline			There is some inconsistent use of language between the amalgamated guidance (out of scope). For example, some recommendations shift from the term "pharmacotherapies" to "options" (presumably to include e-cigarettes). For example, pharmacotherapies is updated to "options" in recommendation 1.14.8, but its use is continued in the recommendations 1.14.1 and 1.14.15.	<p>Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.</p> <p>In 1.14.8 'pharmacotherapies' was deliberately changed to 'options' as this section is focusing on behavioural support which recommendations in section 1.12 state should be offered alongside all options.</p> <p>In recommendation 1.14.1 the focus is on temporary abstinence and the evidence for e cigarettes was not reviewed in this area. In 1.14.15 the focus is specifically about pharmacotherapies, not e- cigarettes. and so in these cases 'pharmacotherapies' has not been changed to 'options'.</p>

NHS England and NHS Improvement	Guideline	010	024	1.3.4 Please clarify who will run the campaigns?	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
NHS England and NHS Improvement	Guideline	015	005	Recommendation 1.8.2 (section technically not in scope) – does this contradict other elements of guidance that recommend the use on alternative non-medically licensed nicotine-containing products i.e. e-cigarettes as a substitute for tobacco (acknowledging the gap in evidence for their use as a partial substitute)?	Thank you for your comment. This recommendation has been carried forward and the evidence underpinning this recommendation has not been reviewed. Please see the <a href="#">scope document</a> on the NICE website. Recommendation 1.8.2 focuses on directing those working in public health and those with tobacco control as part of their remit to raise awareness to people who smoke and the use of 1 or more medically licensed nicotine-containing products to reduce the risk of illness and death. It does not suggest that medically licensed nicotine-containing products are the only way to reduce the risk of illness and death and further down in this recommendation (p.16, line 6-7) recommendations on what information to provide about nicotine-containing e-cigarettes are hyperlinked.
NHS England	Guideline	016	019	NG 92 published in 2018 not 2008	Thank you for your comment. This has now been amended in line with your comment

and NHS Improvement					
NHS England and NHS Improvement	Guideline	017	008	NG 92 published in 2018 not 2008	Thank you for your comment. This has now been amended in line with your comment
NHS England and NHS Improvement	Guideline	022	024	1.12.1 Have you considered using "Allen Carr's Easy Way to stop smoking" methodology? Much the same way that tackling obesity now uses Weight Watchers and Slimming World.	Thank you for your comment. A rapid review to examine the effectiveness of the Allen Carr method is currently in the commissioning process at NICE.
NHS England and NHS Improvement	Guideline	025	005	The section on makes a requirement on NHS staff to be able to appraise patients on the pros and cons of using e-cigarettes. The current wording in section 1.12.14 focuses on risks, but could be clearer on the evidence base and effectiveness of e-cigarettes (as presented in evidence review K; page 59).	Thank you for your comment. The format of the recommendations is in line with the NICE editorial style and the NICE methods and process guide. The recommendation (1.12.14) provides the advice based on the underpinning evidence base. The consideration and discussion of the evidence by the Public Health Advisory Committee (PHAC) is outlined in the rational and impact section (p.78 to 79) and the evidence review both of which are hyperlinked for ease of access on page 26 underneath recommendation 1.12.17.
NHS England and NHS	Guideline	025	025	1.12.14 What about the risks of battery overheating on charging e-cigarettes and is there any evidence of allergies to vapour?	Thank you for your comment. No evidence was identified regarding the risks of battery overheating or allergies to vapour.

Stakeholder	Document	Page No	Line No	Comments	Developer's response
Improvement					Recommendation 1.12.13 refers to the provision of consistent and up-to-date information about nicotine-containing e-cigarettes and provides examples which includes the NCSCT e-cigarette guide which has a section within it regarding use, charging and batteries. Recommendation 1.12.16 highlights that people providing stop-smoking support or advice, should ask people using nicotine-containing e-cigarettes about any side effects or safety concerns that they may experience: 'Report these to the MHRA Yellow Card scheme, and let people know they can report side effects directly'.
NHS England and NHS Improvement	Guideline	026		<p>The NHS in secondary care is adopting an opt-out approach to the delivery of smoking cessation interventions (evidence for effectiveness based on the Ottawa Model for Smoking Cessation <a href="https://tobaccocontrol.bmj.com/content/26/3/293">https://tobaccocontrol.bmj.com/content/26/3/293</a>).</p> <p>Should an opt-out approach for stop smoking treatment should be explicitly stated as the recommended approach across all care settings including Primary and Secondary Care?</p>	Thank you for your comment. It is unclear what specific element on p.26 your comment refers to. Recommendation 1.12 focuses on stop-smoking interventions that should be accessible to adults and the advice that should be provided with these interventions as well as recommendations on stop-smoking quitlines. Recommendations 1.13 and 1.14 focus on support to stop smoking in primary and community care, and secondary care services (p.27 to 34) which are a greyed-out area of the guideline and are outside of the scope for this update which only included opt out in pregnancy. Please

Improvement				those who say they do not smoke (p47 line 9). Unclear of the rationale as to why the lower level of 3ppm is made on page 47 and the different cut offs are a confusing method for HCPs. Is there any reason why 3 ppm rather than 4ppm has been stipulated in page 47?	reference to 4 ppm in recommendation 1.18.2 is in the context of the provision of an opt-out referral to receive stop-smoking support for pregnant women. The reference to 3 ppm in recommendation 1.18.4 refers to women who do not smoke and to provide help to identify the source of the carbon monoxide level of 3 ppm.
NHS England and NHS Improvement	Guideline	059	010	Recommendation 1.22.14 is recommending that NHS providers make nicotine-containing products commercially available in hospital shops; which therefore includes e-cigarettes. Bearing in mind the acknowledged unknown risks associated with the long term use of e-cigarettes should this recommendation be inclusive of these products?  Additionally, if so, would it be appropriate for NICE to advise on stocking of products that are or are not associated with the tobacco industry?	Thank you for your comment. The committee recommend e-cigarettes throughout the guideline and it is unclear why this circumstance would be different. It is not within NICEs remit to advise on which specific products shops should stock. Any nicotine containing e-cigarettes that were awarded a license by MHRA would have been assessed for their clinical effectiveness and safety as part of the licensing process. This would include any long-term risks.
NHS England and NHS Improvement	Guideline	090	005 and 006	The current guideline states that "In the current guideline, switching completely from smoking to any nicotine-containing product is considered to be stopping smoking rather than harm reduction". It was difficult to identify this in the recommendations; is it clearly stated?	Thank you. The term cessation is used throughout the guideline and is defined in the 'terms used in this guideline' section.

				<p>particular issues relating to COVID-19 that we should take into account when finalising the guideline for publication?</p> <p><i>"More progress is needed, and BTS is urging NHS leadership to use the current reconfiguration of healthcare prompted by COVID-19 pandemic to embed properly funded and organised smoking cessation in all its reformed services, making the best use of all the new digital solutions and innovations that resulted from dealing with the pandemic."</i><sup>1</sup></p> <p>COVID has reminded us of the importance of health generally, and specifically respiratory health. We also recognise that the pandemic related backlog will be with us for some time, with the waiting list now at the highest level since comparable records began<sup>2</sup>. When wards and beds are full, this puts intense pressure on the system, and many patients may be unable to get the critical care they need and can be very costly, making the commitment to prevent ill health even more important.</p> <p>COVID-19 related recommendations to enhance smoking cessation support and delivered system-wide benefits.</p>	<p>Several of the recommendations speak to and support the points you raise.</p> <p>In terms of proactive identification there are several recommendations that seek to proactively identify and offer support to specific groups of 'high-risk' smokers and smokers in general. This includes recommendations 1.11 and 1.18 which refers to pro-active identification. Recommendations 1.11.8 to 1.11.11 seek to identify smoking among carers, family and other household members; 1.11.9 adopts a proactive approach to identification and subsequent support and opt-in referral.</p> <p>In terms of MECC several of the recommendations align with the principles of MECC. Recommendation 1.11.1 considers MECC in the sense that it requests that "at every opportunity" people should be asked "if they smoke or have recently stopped" with 1.11.2 to 1.11.7 highlighting approaches to support, referral and recording and follow-up – a more specific reference to this is outlined in the rationale and impact section relating to recommendations 1.12.1 to 1.12.6 where the</p>

				medicines and medical devices, these products would need to be assessed for clinical and cost effectiveness before they are commissioned and prescribing is permitted.	
PrescQIPP	Guideline	022	024	Clarity is needed on what is meant by 'Ensure the following are <i>accessible</i> to adults who smoke' with respect to unlicensed e-cigarettes.	Thank you for your comment. The committee was aware that local areas have very different commissioning arrangements for smoking cessation and agree that the most important thing was ensure that people had access to the range of interventions. The recommendation begins 'Ensure' and is therefore a strong recommendation.
PrescQIPP	Guideline	022	028	'Ensure medically licensed products are accessible'. Should an e-cigarette product be licensed in the future, its clinical and cost effectiveness would need to be evaluated before it was commissioned, and prescribing was permitted.	Thank you. Nicotine containing e-cigarettes that applied for a licence would be assessed for clinical effectiveness and safety by the MHRA as part of the licensing process. At that point, NICE would consider reassessing the cost-effectiveness of the product.
PrescQIPP	Guideline	023	005	The guideline suggests making e-cigarettes 'accessible' as a stopping smoking intervention. As there are currently no licensed e-cigarettes so they cannot be prescribed, does this mean making unlicensed e-cigarettes available free of charge from smoking cessation service as part of a quit attempt? If yes, how will this be funded?	Thank you for your comment. The committee was aware that local areas have very different commissioning arrangements for smoking cessation and agree that the most important thing was to ensure that people had access to the range of interventions.
PrescQIPP	Guideline	026	001	The guideline states that there is not enough evidence to know whether there are long-term harms from e-cigarette use. We are concerned	Thank you for your comment. The guideline does not advocate that e-cigarettes are prescribed. The committee has

				<p>about the proposal to allow future prescribing of a medicinal product for which we have inadequate long term safety data, particularly as these licensed products could have a higher nicotine content than currently specified under the UK Tobacco and Related Products Regulations 2016. ;</p> <p><a href="https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/962221/Vaping_in_England_evidence_update_February_2021.pdf">https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/962221/Vaping_in_England_evidence_update_February_2021.pdf</a> and Licensing procedure for electronic cigarettes as medicines - GOV.UK (<a href="http://www.gov.uk">www.gov.uk</a>).</p>	<p>recommended that nicotine containing e-cigarettes are one of a number of options to be made accessible to adults who smoke. As part of their discussions, they considered the potential long-term effects of using these products. The rationale and impact section relating to this recommendation outlines the issues the committee considered. These include the following:</p> <p>The extensive harms of smoking are well known, and the committee agreed it is unlikely that e-cigarettes could cause similar levels of harm</p> <p>There was a small amount of evidence about short-term adverse events of e-cigarettes that did not show that they caused any more adverse events than NRT, e-cigarettes without nicotine or no treatment.</p> <p>Experts from the MHRA described to the committee the monitoring process for both short- and long-term harms of using e-cigarettes, and that as of March 2020 no major concerns had been identified. The committee was not aware of any harms that had been identified since then. Monitoring is ongoing and the evidence may change in the future.</p> <p>The committee agreed that with the limited data on effects of longer-term use, people</p>

					consider whether to assess the cost-effectiveness.
Primary Care Respiratory Society	Guideline	General	General	A significant omission from the current document is a recommendation regarding the management of second hand smoke exposure in the home, specifically for children. There are several recommendations regarding smoking and young people with regard to retail shops, schools etc, but little about tackling the home influence. There is also a short paragraph about getting carers/parents on board with helping smoking cessation, but again no real mention of the influence of second hand smoking and how to deal with it especially in young people who may or may not be smoking already. The benefits to the wider family of quitting smoking is something that should form part of the dialogue around the benefits of quitting	Thank you for your comment. The management of second hand smoke exposure in the home is outside the scope of this guideline. Please see the <a href="#">scope document</a> on the NICE website. The guideline does acknowledge the risk posed by second hand smoke with recommendations outlining the need to raise public awareness of the harm of second hand smoke in the context of using medicinally licensed nicotine-containing products (1.8.1); the provision of clear advice regarding the danger of second hand smoke for those using acute, maternity and mental health services (1.14.1) and during contact with partners, parents and other household members of people using acute, maternity and mental health services when identifying smoking (1.11.11); and in the context of the development of policy for smoke free grounds (1.21.2); and when training those who advise people how to stop smoking (1.23.4 and 1.23.11).
Primary Care Respiratory Society	Guideline	General	General	We would recommend providing guidance on how to support those attempting to stop e-cig use. While the document repeatedly says that	Thank you for your comment. Supporting people to stop e-cigarette use is outside the scope of this guideline which was focussed

				HCPs should offer advice, what that advice should be is not defined	specifically on tobacco. Please see the <a href="#">scope document</a> on the NICE website.
Primary Care Respiratory Society	Guideline	General	General	There is no acknowledgement of the potential value of long-term smoking cessation aid use (e-cigs or NRT) to prevent relapse to tobacco smoking	Thank you for your comment. Recommendation 1.17 (Adherence and relapse prevention) contains recommendations which suggest offering the opportunity for a further course of pharmacotherapy to prevent a relapse to smoking (1.17.2). However, the evidence regarding both the use of pharmacotherapy and/or NRT was mixed and whilst the committee acknowledged the importance of preventing relapse after a successful quit attempt, they were not confident that the evidence supported a recommendation regarding the use of NRT to help prevent relapse but have recommended the use of pharmacotherapy (recommendation 1.17.2). To this end a research recommendation (research recommendation: relapse prevention) has been developed to foster research into the effectiveness of nicotine replacement therapy or nicotine-containing e-cigarettes for preventing relapse after a successful quit attempt.
Primary Care	Guideline	General	General	Consider mentioning that ICS are less effective in people with respiratory conditions if they also smoke tobacco	Thank you for your comment. Inhaled corticosteroids (ICS) were outside the scope

				vii Public Health England, <i>It's time for a truly smokefree NHS</i> (December 2016) available here: <a href="https://publichealthmatters.blog.gov.uk/2016/12/06/its-time-for-a-truly-tobacco-free-nhs/">https://publichealthmatters.blog.gov.uk/2016/12/06/its-time-for-a-truly-tobacco-free-nhs/</a>	
Proprietary Association of Great Britain	Guideline	General	General	The policy landscape surrounding smoking cessation is also currently in a state of flux. A new Tobacco Control Plan (TCP) is due to be published in 2021 and will support the Government's ambitions for a smoke-free nation by 2030. The TCP should be updated to set out a strategy for how the smokefree 2030 ambition will be met, taking into account the impact of the Government's COVID-19 response on access to smoking cessation support and the above-mentioned abolition of Public Health England. It is important that the guideline is updated in line with relevant outputs from the TCP.	Thank you for your comment and for the information provided. NICE will review the situation once the new Tobacco Control Plan is published and take appropriate action regarding the guideline and associated materials as required.
Proprietary Association of Great Britain	Guideline	General	General	We understand that quitting smoking is one of the most challenging behaviour changes a person can make. Once a smoker takes the first step of acknowledging the need to quit, smoking cessation services must ensure they have access to a broad range of evidence-based tools and services to help support them in achieving this goal.	Thank you for your comment.
Proprietary Association	Guideline	General	General	Pharmacists are well placed to support smoking cessation services specifically, as	Thank you for your comment. PHAC have considered the evidence of effectiveness,

of Great Britain				well as supporting people who ask for VBA. Pharmacies are situated at the centre of communities and are easily accessible by the majority of the local population. There are over 11,000 community pharmacies in England and over 99% of people living in areas of the highest deprivation are within a 20-minute walk of a community pharmacy. However, the draft guideline has very little mention of the importance of unlocking the unique opportunities that community pharmacists have to use VBA to signpost and support people towards smoking cessation services and quitting aids, such as NRT.	barriers and facilitators, and cost-effectiveness as well as expert testimony and contributions from expert co-optees to the committee in the development of this guideline. The guideline on page 2 outlines 'who is it for?' and within this refers to health and social care professionals and people with a remit to improve the health and wellbeing of children and young people, which would include pharmacists. The guideline recommendations specify for example 'those working in public health' and 'retailers of medicinally licensed nicotine-containing products' (Recommendation 1.8); Recommendation 1.11 is aimed at 'health and social care professionals' which would include pharmacists. So whilst pharmacists may not be explicitly mentioned, they are implicit in the groups outlined for whom the guideline is aimed at.
Proprietary Association of Great Britain	Guideline	General	General	Pharmacists already have a role in supporting smoking cessation. However, to enable pharmacists take on a greater clinical role in line with their skills, and to support people and patients with their health and wellbeing, pharmacists should be able to populate patient medical records. Enabling pharmacists to write to patients' records would mean that advice and treatment given in other health settings	Thank you for your comments. Redefining the current clinical capabilities and role of community pharmacists is outside the scope of this guideline and outside the remit of NICE.

				system data in Southeast England. Nicotine Tob Res. 2013 May;15(5):904-9. doi: 10.1093/ntr/nts221. Epub 2012 Oct 8. PMID: 23045522.	
Proprietary Association of Great Britain	Guideline	057	001 - 008	The update on commissioning and designing services states: "Ensure service specifications require providers of stop-smoking support to offer nicotine replacement therapy (NRT) for as long as needed to help prevent a relapse to smoking." This is an important addition that will enable people to have access to NRT when they need it. However, we would suggest adding a line that states the need for "appropriately trained professionals have regular checks with the individual, so as to ensure they continue to be on the path towards smoking cessation".	Thank you for your comment. Section 1.22 of the guidance focuses on the commissioning of services. Please see the recommendations in section 1.17 which consider relapse prevention and in particular recommendation 1.17.1 which covers the importance of discussing relapse prevention from an early stage and at every contact.
Proprietary Association of Great Britain	Guideline	057	022 - 023	There is only a brief reference in the guideline to the NICE guidance on lung cancer.  The integration of smoking cessation into the lung health check programme is an important intervention to prevent smoking-related ill-health from escalating. Implementation should therefore be measured and evaluated to understand the impact and reach of the guideline, particularly in light of the COVID-19	Thank you for your comment. We only refer to other NICE guidance when a recommendation links to it.

				pandemic response, which resulted in many of these services being temporarily halted.	
Public Health England – Breathe 2025	Guideline	General	General	<p>The guidelines, quite rightly, make a range of recommendations for research (see page 72-76). Yet there is only one acknowledgement of the need to take into account the outcomes of any such research, in section 1.9.2 bullet 2 which recommends “Use the best available evidence of effectiveness, such as Cochrane reviews”.</p> <p>To our knowledge some, if not all, of the research recommendations are already being taken forward. For example, NIHR has funded ‘Helping Pregnant Smokers Quit: A Multi-Centre RCT of Electronic Cigarette and Nicotine Patches’, although unfortunately the research may not be available before the guidelines are published so is unlikely to be able to be taken into account during the consultation. NIHR is also funding research on smoking cessation in underserved groups such as prisoners and the homeless.</p> <p>As the evidence continues to develop and evolve, it is important that in the overview section of the guidelines there is a generic recommendation that research outcomes are taken into account. We suggest something</p>	<p>Thank you for your comment. The research recommendations developed by PHAC seek to address the gaps in the evidence identified during the guideline development process with the hope of stimulating research in these areas for consideration when this guideline or aspects of this guideline are considered for update.</p> <p>NICE routinely checks that published guidelines are current, accurate and up to date via our surveillance function which explores if there is any new evidence to contradict, reinforce or clarify guideline recommendations. Surveillance also identifies new interventions that may need to be considered within a guideline and explores changes in context that may mean modifications are needed, for example, changes in policy, infrastructure, legislation or costs. A proactive approach is taken that includes reacting to events at any time after guideline publication (for example, publication of a key study).</p>

				as an over the counter medication. This avoids the delays caused by getting a prescriber and is hugely beneficial since the half-life of nicotine is approximately 2 hours and longer delays will result in unnecessary discomfort.	
Public Health England – Breathe 2025	Guideline	032	004 - 009	<p>1.14.20 - We welcome the recommendation to tell smokers about the different types of medicinally licensed nicotine containing products, how to use them and if possible, prescribe them. However, we are disappointed that e-cigarettes are not also recommended as a vital intervention for smokers who are in a situation where they need to temporarily abstain. If this guideline only recommends the use of NRT to support tobacco abstinence, this represents an extremely challenging scenario for trusts that currently offer e-cigarettes to service users and risks further disadvantaging people with mental health ill health, who will be left behind. We would worry that failure to include e-cigarettes as a safe, valid and effective way to support temporary abstinence will enable some service providers to opt out of and we will find ourselves in a situation where the teachable moment to support stopping smoking and switching to an e-cigarette is lost.</p> <p>SLaM NHS Foundation Trust provide mental health care services from 4 large London</p>	<p>Thank you for your comment. The evidence on the use of nicotine containing e-cigarettes to support temporary abstinence was not reviewed as part of this guideline update and therefore recommendations have not been made in this area.</p> <p>Regarding differing needs between people admitted to acute hospital settings and to mental health settings, these recommendations are greyed out as they are outside the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.</p>

				<p>based hospitals (50 wards). Typically, about half of the adult smokers admitted to hospital are current smokers, it is rare to find a smoker at the point of admission who decides to make a quit attempt. For the overwhelming majority (95%) their decision at the point of admission is to use whatever support is available to temporarily abstain. Currently, the preferred option to support temporary abstinence is an e-cigarette, because smokers feel that this more closely matches the experience of smoking compared with using NRT products. SLAM have used e-cigarettes in this way since 2012 and typically provide around 400 free e-cigarette starter packs each month. In about 30% of cases the smokers find that the provision of a free e-cigarette starter pack, given with the intention to support temporary abstinence on admission is so effective that they decide to continue using it and do not return to smoking.</p> <p>In 2019 ASH conducted a survey of mental health trusts which found that 42% of mental health trusts in England provide free e-cigarettes to adult smokers on admission to hospital to support temporary abstinence, and as such we believe there is ample evidence to support this consensus practice.<sup>9</sup> More</p>

				<p>specific manner) and again under Quitlines (1.12.20). However, section 1.23, line 12-26, 'Those who advise people to stop smoking' fails to include any mention of the Standard. While the subtitle may suggest this section is specific to those who identify smokers and prompt quit attempts (i.e. deliver VBA), there is nothing further in this section on training for those who deliver ongoing stop smoking support (i.e. behavioural support), as has been the case in previous versions of the document. At minimum this should be included for stop smoking services. The wording found in the 2018 NG92 recommendation on this subject served this purpose. The key being 1) stop smoking support is provided by trained staff and 2) that training be consistent with the National Training Standard. Given the level of depth the document goes into for maternity care and closed institutions, there should be at least the equivalent depth provided for all settings (stop smoking services, maternity care, closed institutions, primary care) who are delivering stop smoking support. This should consist of the National Training Standard as default, plus additional training for those working with specific population such as mental health and pregnancy.</p>

Stakeholder	Document	Page No	Line No	Comments	Developer's response
				Overall, there is little said in the new NICE guidance on stop smoking services and stop smoking support delivered in other settings compared to previous guidance documents. There is also a level of specificity in some sections that is not consistently applied in the document (e.g. lots of detail in maternity care section and smokeless tobacco and only a few bullets on other important areas of practice). This risks making the document less clear and less user friendly than previous NICE guidance. 18 Brose L, West R, Michie S, McEwen A. Changes in success rates of smoking cessation treatment associated with take up of a national evidence-based training programme. Preventive Medicine 2014;69C:1-4	
Public Health England – Breathe 2025	Guideline	075	007 - 013	We suggest considering the addition of two further points regarding recommendations for further research into relapse prevention. Firstly, we see a clear need for more research on varenicline for relapse prevention, given the committee acknowledges its likelihood of increasing long-term abstinence and supporting Cochrane evidence. <sup>19</sup> Secondly, we suggest it would be a good idea to recommend more trials looking at relapse prevention interventions delivered to people	Thank you. Research recommendations in NICE guidelines are specifically to address gaps in the research that the committee considered while making their recommendations. They do not address general gaps in the evidence.

				20 Hartmann-Boyce J, McRobbie H, Butler AR, Lindson N, Bullen C, Begh R, Theodoulou A, Notley C, Rigotti NA, Turner T, Fanshawe TR, Hajek P. Electronic cigarettes for smoking cessation. Cochrane Database of Systematic Reviews 2021, Issue 4. Art. No.: CD010216	effect of e-cigarettes compared to NRT (RR of 1.23 [CrI: 0.73, 1.95]) or long + short NRT (RR: 0.84 [CrI 0.48, 1.40]). The discrepancy between pairwise and NMA effect estimates is likely to be due to the modifying effect of indirect treatment estimates within the network. Consistency checking did not identify any concerns with the model that was used for the NMA and the committee focussed their discussion on the results of this NMA.
Public Health England – Breathe 2025	Guideline	079	008 - 013	This section states the committee had low confidence in the finding of no difference in adverse events in people using nicotine e-cigarettes compared to NRT, e-cigarettes without nicotine, and no treatment, because the studies were powered to investigate effectiveness and not adverse events. Though this is an issue for serious adverse events, where events are rare, for non-serious adverse events, which this section appears to refer to at first glance, this is not an issue of underpowering because non-serious adverse events are more common than cessation (a study powered to detect a difference in cessation would also be powered to detect a difference in adverse events). If this section is on serious adverse events, it should be clarified that that is the case. If not, it should be	Thank you. Details of the adverse events reported are contained in evidence review K and are adverse events rather than serious adverse events. The rationale and impact section describes the committees consideration of the recommendations and their view is consistent with the findings in the systematic review you reference.

				reworded. The latest Cochrane review has moderate certainty evidence of no difference in rates of adverse events (non-serious) between nicotine and non-nicotine e-cigarettes. <sup>21</sup> 21 Hartmann-Boyce J, McRobbie H, Butler AR, Lindson N, Bullen C, Begh R, Theodoulou A, Notley C, Rigotti NA, Turner T, Fanshawe TR, Hajek P. Electronic cigarettes for smoking cessation. Cochrane Database of Systematic Reviews 2021, Issue 4. Art. No.: CD010216	
Public Health Wales – All Wales Tobacco Control Leads group	Guideline	023	005	Help Me Quit services in Wales currently do not provide nor advocate e-cigarette use as a smoking cessation aid. This recommendations goes against the current position on e-cigarettes in Wales. If e-cigarettes are to be used in line with other NRT products where do people using these products stand when they are prohibited to be used such as workplaces, public indoor areas, school grounds, hospitals and playgrounds (in line with new smoking ban – health boards/councils around Wales class e-cigarettes the same as tobacco cigarettes). This will surely impact upon their quit attempt if they are prohibited to using them freely in comparison to other NRT products.	Thank you for your comment. E-cigarettes are one option recommended be accessible to adults amongst other options which include medicinally licensed products, behavioural support, and brief advice. Patient informed choices in decision making regarding their health is a key element within this guideline and within NICE's work more broadly. Recommendation 1.12.4 outlines that those providing stop-smoking support or advice should discuss with people which options to use to stop smoking considering preferences, health and social circumstances as well current medications, contraindications, potential adverse effects and previous experience of stop-smoking aids. NICE guidelines are written specifically for England,

Control Leads group					
Public Health Wales – All Wales Tobacco Control Leads group	Guideline	031	021	What is the level of expertise required? How do we ensure we are delivering this recommendation appropriately?	Thank you for your comment. The level of expertise will be for local systems to agree. However, in the studies which underpin this recommendation, structured smoking cessation interventions were delivered by trained mental health smoking cessation practitioners. These were generally experienced mental health nurses who worked in conjunction with the participant and the participant's primary care physician or mental health specialist to provide an individually tailored smoking cessation service.
Public Health Wales – All Wales Tobacco Control Leads group	Guideline	031	022	Help Me Quit uses an evidence based abrupt cessation model. This may be more challenging for clients with complex mental health issues. What are the implications for training and delivery if the model is tailored to each client? It is important the approach taken is consistent.	Thank you for your comment. The committee has noted in the rationale and impact section that relates to this recommendation, that it is important that stop smoking support is available to everyone and that people with mental health conditions should not be treated differently in this. However, they also recognised that it is important to consider if additional support could be appropriate. For this reason recommendation 1.14.19 focuses on offering additional support to those who may need it.

					and e-cigarettes as options that should be accessible to adults who smoke. Further, recommendation 1.12.6 highlights that short-acting NRT on its own and long-acting NRT used on its own are less likely to result in a successful quit attempt.
Royal College of Nursing	Guideline	025	019	<i>Which areas will have the biggest impact on practice and be challenging to implement? Please say for whom and why</i>	Thank you for your comment. NICE guidelines are evidence-based recommendations for health and care in England.. They set out the care and services suitable for most people with a specific condition or need, and people in particular circumstances or settings. People have the right to be able to make informed decisions about their care. Our guidance should be considered when making decisions with them. It is beyond NICE's remit to make commissioning decisions and these should rightly occur at the local commissioning level. Your comments will be considered by NICE where relevant support activity is being planned.
		027	010	The implementation of e-cigarettes in the current guidelines may be difficult to implement if the (1) resources are not available or if the employers do not wish to provide these resources. (question: 2) Typically a good e-cigarette device costs between £20-30 and the vape juice is £5-10.  There is mention of community, primary and mental health services. Please consider addiction services these are not always attached to the mental health service bubble-addiction services are often overlooked. The addiction support services go across statutory, non-statutory and private sectors. It is important to target crack cocaine smokers/ People who use Drugs, people at risk of BBVs and those who wish to attend relapse prevention programmes.	Recommendation 1.13 and 1.14 (apart from 1.14.9) are greyed-out areas of the guideline and are outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website. For clarification, recommendations 1.13 and 1.14 are for health and social care

Royal College of Physicians	Guideline	027	008	NG 92 published in 2018 not 2008	Thank you for your comment. This has been amended.
Royal College of Physicians of Edinburgh	Guideline	025	025	<p>1.12.14 The College has consistently urged a cautious approach to the use of e-cigarettes since their introduction to the market, in the light of an incomplete evidence base and the 'do no harm' principle.</p> <p>E-cigarettes may be useful for a minority of individual smokers as a route out of using combustible tobacco, however the wider public health picture needs to be considered if NICE is considering recommending their use. Access to e-cigarettes needs to be controlled carefully; they are not products for children or non-smokers. The recently published 2021 WHO global tobacco report urges that it should be anticipated that nicotine and tobacco products will evolve, and to plan for their regulation (1). There is still a lot we do not know about e-cigarettes and further research is required. E-cigarettes are not a single standardised product, and are not without significant potential harm (2).</p> <p>While a minority of individual smokers may find e-cigarettes to be a way of ceasing tobacco</p>	<p>Thank you for your comment.</p> <p>E-cigarettes are one option recommended be accessible to adults amongst other options which include medically licensed products, behavioural support, and brief advice. Patient informed choices in decision making regarding their health is a key element within this guideline and within NICE's work more broadly. Recommendation 1.12.4 outlines that those providing stop-smoking support or advice should discuss with people which options to use to stop smoking, considering preferences, health and social circumstances as well current medications, contraindications, potential adverse effects and previous experience of stop-smoking aids. NICE considers this will include discussions into the points you raise and recommendation 1.12.14 acknowledges the lack of evidence regarding long-term harms from e-cigarette use. PHAC have also developed seven research recommendations focused on e-cigarettes with the hope of stimulating further research in this area.</p>

				<p>smoking, this needs to be weighed carefully against the whole population impacts including the prevalence of dual use/relapse and impacts on the next generation. If including this non-NHS prescription in cessation advice, we consider that NICE should also be clear that dual use provides no harm reduction, may potentially increase harm in the long term (3), and that support to quit e-cigarettes should be provided as part of NHS smoking cessation services (4).</p> <p>(1) WHO 2021 Global Tobacco report P.104 Tobacco control must anticipate nicotine and tobacco products will evolve rapidly and plan for their regulation</p> <p>(2) Ibid p2</p> <p>(3) <i>recommendation from WHO 2021 report ibid for support to quit ENDS; also a learning outcome of work in prisons when e-cigs were supplied and where prisoners who quit tobacco then wanted support to quit e-cigs.</i></p> <p>(4) WHO report: Therefore, the country's national tobacco cessation services should consider providing support for ENDS users to quit</p>

Royal College of Physicians of Edinburgh	Guideline	053	019 (ongoing approach throughout policy section)	<p>1.21 The College represents over 13,000 Fellows and Members in over 90 countries, covering 54 medical specialties and interests. Many of the College's Fellows and Members are based in low and middle-income countries (LMIC), which are struggling with the combustible epidemic, and lack resources and expertise to take on a new, additional epidemic. The College is concerned that a perceived 'endorsement' of e-cigarettes by NICE could be widely quoted –including out of context- and therefore negatively affect public health in LMIC. It is also concerned that using the term 'e-cigarettes' may be widely perceived to cover a range of products with very different impacts and profiles, also being promoted by commercial interests as recreational goods.</p> <p>The College urges the precautionary principle - in that the studies on e-cigarettes are in the early days (indeed, researchers are still finding out new harms of smoking tobacco 60 years after it was first noted) even in high-income countries. The health profile of using tobacco and exposure to asbestos both took decades to become clear. There are virtually no data on the effects of e-cigarettes in low and middle-income countries, regarding harm, economic</p>	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.

				<p>impact, gateway drug, effect of use as quitting aide, ingredients, additives, the effects of second-hand vape, re-normalisation of smoking, the effect of vaping on COVID, etc. We do not yet know the long-term effects of e-cigarettes on health and this must be recognised in NICE guidelines and recommendations.</p> <p>There is great concern in low and middle-income countries that although the vaping/tobacco companies state the purpose is to help smokers quit, where the industry is allowed to advertise and promote, it is clearly aimed towards young people as an exciting and fun new way of smoking. The College supports the WHO position on e-cigarettes, which states "Evidence reveals that these products are harmful to health and are not safe. However, it is too early to provide a clear answer on the long-term impact of using them or being exposed to them"(1). Even in the UK which currently regulates e-cigarettes in line with European legislation, the Scottish Government identified domestic e-cigarette advertising as an under-regulated feature and passed legislation in 2016 to address this (1b).</p>

				<p>The WHO has stated its concern “that children who use these products are up to three times more likely to use tobacco products in the future. The Organization recommends governments to implement regulations to stop non-smokers from starting to use them, to prevent renormalization of smoking in the community, and to protect future generations” (2).</p> <p>Currently, 32 countries have banned the sale of electronic nicotine delivery systems (ENDS). A further 79 have adopted at least one partial measure to prohibit the use of these products in public places, prohibit their advertising, promotion and sponsorship or require the display of health warnings on packaging (2). This is a very different approach from the one taken in the UK and it is approach that the College now urges NICE to consider, in line with the WHO Global Tobacco report – (27 July 21) subtitled: addressing new and emerging products. In this report, the WHO restates the importance of tackling the global tobacco epidemic, and is also clear in recommending that new and emerging products should be included in and regulated along with tobacco products under the WHO</p>

				<p>year, including 1 million from second-hand smoke (2).</p> <p>While e-cigarettes should be regulated to maximise protection of public health, tobacco control must remain focused on reducing tobacco use globally (2). It is however clear that tobacco companies deploy novel products within public health interference strategies (2b) and there are indications that these products are viewed by tobacco companies as additional rather than replacement products.</p> <p>The College recommends that unless and until an e-cigarette product is available as an NHS prescription option, NICE should exercise greater caution with regards to framing these products in terms of cessation, and should consider the whole population and longer term health impacts. It should recognise that the term 'e-cigarettes' covers a multitude of devices and liquids with unknown profiles and impacts, and also that the statements of health agencies have been co-opted to promote commercial interests in the UK and internationally. At a minimum, NICE should state that if any of the Guidelines support, endorse or promote E-cigarettes that these Guidelines do not apply to LMIC.</p>

				<p>the disproportionate burden and adverse health effects smoking has on people with mental health conditions and ensure that people with severe mental illness are not left further behind as smoking prevalence reduces in the population as whole. As such, we are concerned that the recommendations do not sufficiently reflect the differences between secondary care acute and mental health settings. At present the recommendations often consider the needs of people admitted to an acute hospital and people admitted to a mental health setting as one population, requiring the same approach. We would urge that, where necessary, that the guideline is amended, to ensure that specific needs of people admitted to secondary care mental health settings are addressed.</p> <p>Accounts of some of our Trust experiences are referenced below:</p> <ul style="list-style-type: none"> <li>• Ratschen E, Stewart P, Horspool M, Leahy M Smokefree acute adult mental health inpatient wards: the service user experience. <i>BJPsych bulletin</i> April 2018</li> <li>• <i>Smoke-free implementation in the Sheffield NHS trust - Case study</i> - GOV.UK in: Public Health England</li> </ul>

				<p>The use and provision of e-cigarettes to support patients during a smoke free stay has become an important component of our tobacco dependence treatment offer; an ASH survey of mental trusts indicated that 42% of UK trusts responding provide free e-cigarettes to adults smoking on admission to hospital (ASH, <i>Progress towards smoke free mental health services.</i>, 2019). People with severe mental illness tend to smoke more cigarettes and are more heavily addicted than smokers overall. Whilst nicotine replacement therapy has vital role to play, in our experience, service users often prefer e-cigarettes to manage nicotine withdrawal.</p> <p>As noted by the guideline committee, whilst 'smoking rates have substantially decreased in the general population, for those with mental health conditions rates have remained stagnant, indicating an increasing health inequality which needs addressing' (<i>Tobacco: evidence reviews for treatments for smoking cessation and harm reduction</i>, pg. 90, lines 9 – 12). We also note the expert evidence provided by Martin Jarvis, with respect to the great potential value of e-cigarettes in addressing social inequalities in health attributable to cigarette smoking (NICE</p>

				<p><i>Guideline: tobacco Evidence review K for cessation and harm reduction treatments (Appendices).</i> In this context, we are really concerned about the lack of a recommendation for the use of nicotine-containing e-cigarettes to support temporary abstinence. Our view is that this lack of a recommendation will further disadvantage people with mental ill health - through restricting informed choice, and the opportunity for people with severe mental illness who smoke to switch to a less harmful alternative to tobacco, with the potential for specialist advisors and the care team to build on this experience to promote smoking cessation.</p> <p>We note the content of the investigative film 'Vaping Demystified' to support informed decision making about using vaping products (<a href="http://yorkshirecancerresearch.org.uk">yorkshirecancerresearch.org.uk</a>). We also note research by Caponnetto et al study (2021) showing that adults who smoke and were not motivated to quit, when provided a new generation e-cigarette with a high nicotine content, demonstrated substantially decreased cigarette consumption without causing significant side effects.</p> <p><u>Reference:</u> Caponnetto P, DiPiazza J, Kim J et al. Stakeholder	Document	Page No	Line No	Comments	Developer's response
Foundation Trust				the recommendation to include nicotine containing products, such as e-cigarettes, as options for sale in secondary care settings is important and welcome, it will not aid access to nicotine containing products within our Trust. In common with many mental health trusts, our inpatient units are dispersed over a number of sites; only the one site located within an acute trust has access to a hospital shop. Asking wards to commence selling nicotine containing products is not feasible. Using vending machines severely limits choice of nicotine containing products, and is accompanied by many logistical and practical challenges, including ensuring machines are sited away from visitors under 18. If this recommendation is the only recommendation within the guideline to support patients admitted to an inpatient mental health unit to access e-cigarettes this disadvantages people admitted with a mental health problem compared with people admitted to large acute hospitals and raises equal opportunity issues.	
Sheffield Health and Social Care NHS Foundation Trust	Guideline	063 067	027 – 029 023 - 026	Terms used in the guideline: Closed Institutions - and related recommendation We believe that the current definition of this term is too narrow. The definition currently reads: ' <i>Secure environments where people are detained and where smoking is not permitted,</i>	Thank you for your comment. The definition has been updated.

				<p><i>such as secure mental health units, immigration removal centres and custodial sites.'</i></p> <p>Within mental health, reference to secure units is usually taken to apply to forensic units. From a patient perspective being cared for within a smoke free environment, when detained under a section of the Mental Health Act within an acute admission ward or psychiatric intensive care unit, may be experienced as akin to being within a 'closed institution' – with respect to access to smoking. With this in mind, from a staff training point of view, the recommendations on training and stopping smoking (pg 63, line 28-29; pg 64. Line 1-15) apply equally to staff providing care to a proportion of people admitted to secondary mental health care services, as they do to those providing care within a closed institution.</p>	
Sheffield Health and Social Care NHS Foundation Trust	Guideline	073 075	005 - 008 010 - 013	<p>We welcome the following broad research recommendations:</p> <p><i>Recommendation 4: how can people with mental health conditions be supported effectively to stop smoking (individual and system level)?</i></p> <p><i>Recommendation 12: how can people who have recently stopped or temporary abstained from smoking in a smoke-free inpatient or</i></p>	Thank you. Research recommendations in NICE guidelines are specifically to address gaps in the research that the committee considered while making their recommendations. They do not address general gaps in the evidence.

South London & Maudsley NHS Foundation Trust	Guideline	015	007 - 008	<i>Explain that medicinally licensed nicotine containing products could be used as a partial or complete substitute for tobacco, either temporarily or in the long term.</i> More clarity is needed around the definition of 'long-term' – this is especially important for people with long-standing mental health, substance misuse and learning disability where prescribers place restrictions on access to treatments that would undoubtedly prevent relapse for those who have cut down or quit smoking.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
South London & Maudsley NHS Foundation Trust	Guideline	015	015 - 016	<i>Nicotine levels in medicinally licensed nicotine-containing products are much lower than in tobacco, and the way these products deliver nicotine makes them less addictive than smoking,</i> however it also means these products provide less relief for withdrawal symptoms compared with smoking tobacco, therefore combined medicinally licensed nicotine-containing products are required for moderately to heavily dependent smokers, especially in the early stages of treatment.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
South London & Maudsley NHS Foundation Trust	Guideline	017	001 - 003	We welcome the recommendation to involve community pharmacies in local campaigns and maintain links with other professional groups such as dentists, fire services and voluntary groups.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.

				We would like to see welfare and benefits officers/advisors included in this list because they have a unique opportunity to screen for smoking, provide very brief advice and signpost to smoking cessation services as part of their interventions to help people manage their financial situation.	
South London & Maudsley NHS Foundation Trust	Guideline	022	028	Medicinally licensed products to help adults stop smoking include as we would expect Bupropion, varenicline and Nicotine Replacement Therapy (NRT) products. However, given that Bupropion and Varenicline are currently not available for use in England we think it's very disappointing there is no recommendation to use Cytisine – this stop smoking medication has been widely used in Eastern Europe for more than four decades and as an over the counter medication in Canada since 2018, its cost and clinically effective. It's an opportune time to include it as an option especially given the limited options.	Thank you for your comment. The Public Health Advisory Committee (PHAC) discussed the current supply chain issues but concluded that this does not materially change the recommendations within the guideline. Cytisine is not currently licensed for use in the UK and as such is outside the scope of this guideline. Any therapy not licensed in the UK is outlined as an exclusion criterion in the research protocol for evidence review K thus any study pertaining to Cytisine would have been excluded.
South London & Maudsley NHS Foundation Trust	Guideline	023	026	We welcome the inclusion of nicotine containing e-cigarettes as a stop smoking intervention. Can we check if the <a href="https://bnf.nice.org.uk/treatment-summary/smoking-cessation.html">https://bnf.nice.org.uk/treatment-summary/smoking-cessation.html</a> will be updated in line with this new recommendation? Currently it states that e-cigarettes cannot be	Thank you for your comment. . The BNF have their own processes for updating but take account of NICE guidance when they do this. It is not recommended within the guideline that smoking cessation services supply e-cigarettes.

				supplied by smoking cessation services. This creates a problem for us if the most popular and the most effective way of stopping smoking is not accessible to the most vulnerable people in our community. If we follow this instruction the only people who can use an e-cigarette are those who can afford the start-up and on-going costs – and sadly these are prohibitive for many smokers in disadvantaged communities.	
South London & Maudsley NHS Foundation Trust	Recommendation	024	008	For patients who have chosen to use varenicline whilst admitted to a smoke free hospital / service we advocate NRT is prescribed for the first 1-2 weeks of treatment, together with varenicline as recommended by the Helping Smokers Quit London Clinical Senate (2016).	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
South London & Maudsley NHS Foundation Trust	Guideline	025		We welcome the emphasis on ensuring people know how to achieve a high enough dose of NRT – we suggest that in hospital /care settings people are supported to 'self-medicate' / 'self-manage' their medicinally licensed nicotine-containing products because this will reduce the barriers to access and it will enable smokers who are cutting down and quitting to use their products as required without having to approach a nurse to get access to these products from a locked cupboard in a locked room. It will also ensure	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. 				smokers who have short periods of leave from hospital can maintain and build on their smoke-free progress.	
South London & Maudsley NHS Foundation Trust	Guideline	026	005 - 006	We agree that any smoking is harmful, and people using e-cigarettes should be advised to stop smoking tobacco completely but we think it's also important to recognise that not everyone is ready to stop smoking tobacco when they start using an e-cigarette and as such people who are in the process of switching should be encouraged and supported to use e-cigarettes to achieve tobacco harm reduction too.	Thank you for your comment. No evidence was identified relating to nicotine containing e cigarettes and harm reduction. The guideline does however recognise that some people may not be ready or who are not able to 'stop in one go' and there are recommendations to address this in section 1.15 of the guideline.
South London & Maudsley NHS Foundation Trust	Guideline	026	011 - 014	We welcome the guidance to health professionals and vapers to use the MHRA Yellow Card scheme to report side effects and safety concerns. Since e-cigarettes are categorised as an appliance [pg 90 – line 16 evidence review) we seek clarification as to whether e-cigarettes will be added to the Yellow Card scheme for reporting 'Medical Device Adverse Incidents'.	Thank you for your comment, however this is beyond NICE's remit. The recommendation on reporting side-effects includes a link to the MHRA yellow card scheme webpage. This webpage includes a section for reporting side-effects or safety concerns with e-cigarettes.
South London & Maudsley NHS Foundation Trust	Guideline	026	015 - 017	We are pleased to see the emphasis placed on the importance of getting enough nicotine when using an e-cigarette to overcome withdrawal symptoms. We would like to see some reassurance provided here for vapers / prescribers to support the use of nicotine	Thank you for your comment. Recommendation 1.12 and the related rationale and impact section, outlines the stop smoking interventions that the committee recommended should be accessible to adults who smoke. Recommendation 1.12.5 focuses on advising

				Plain Sight Report. The Ottawa model is also recommended in the NHS Long Term Plan. In our experience, it is often the case that at the point of screening for smoking and provision of Very Brief Advice at admission, people coming into mental health care settings are usually distressed and unlikely to be able to weigh up this decision. We favour a more proactive approach which ensures those that need specialist support have access to it using an opt-out approach.	
South London & Maudsley NHS Foundation Trust	Guideline	030	014	We do not believe that the recommendation to provide support to smokers within 24 hours of admission goes far enough to ensure patients comfort or ease their distress. We would welcome a recommendation to provide support within 30 minutes of arrival to hospital. In our experience offering 'Tea and NRT' to smokers on arrival to hospital as an over the counter medication, without the delays caused by getting a prescriber is hugely beneficial since the half-life of nicotine is approximately 2 hours and longer delays will result in unnecessary discomfort.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
South London & Maudsley NHS	Guideline	030	018	It's great to see the recommendation to offer weekly behavioural support sessions, for at least 4 weeks after discharge – we have been doing this for the last 18 months and find it's an excellent way to prevent relapse. However,	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Foundation Trust				<p>We welcome the recommendation to tell smokers about the different types of medicinally licensed nicotine containing products, how to use them and if possible, prescribe them. However, we are disappointed that e-cigarettes are not also recommended as a vital intervention for smokers who are in a situation where they need to temporarily abstain. If this guideline only recommends the use of NRT to support tobacco abstinence, this represents an extremely challenging scenario for us and risks further disadvantaging people with mental health ill health, who will be left behind. We would worry that failure to include e-cigarettes as a safe, valid and effective way to support temporary abstinence will enable some service providers to opt out of and we will find ourselves in a situation where the teachable moment to support stopping smoking and switching to an e-cigarette is lost. We provide mental health care services from 4 large London based hospitals (50 wards). Typically, about half of the adult smokers admitted to hospital are current smokers, it is rare to find a smoker at the point of admission who decides to make a quit attempt. For the overwhelming majority (95%) their decision at the point of admission is to use whatever</p>	<p>scope of this update. Please see the <a href="#">scope document</a> on the NICE website. Regarding differing needs between people admitted to acute hospital settings and to mental health settings, these recommendations are greyed out as they are outside the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.</p>

				<p>support is available to temporarily abstain. Currently, the preferred option to support temporary abstinence is an e-cigarette, because smokers tell us this more closely matches the experience of smoking compared with using NRT products. We have used e-cigarettes in this way since 2012, typically we now provide around 400 free e-cigarette starter packs each month. In about 30% of cases the smokers find that the provision of a free e-cigarette starter pack, given with the intention to support temporary abstinence on admission is so effective that they decide to continue using it and do not return to smoking.</p> <p>We note solid evidence from a recent ASH survey which confirms that 42% of mental health trusts in UK provide free e-cigarettes to adult smokers on admission to hospital to support temporary abstinence, and as such we believe there is ample evidence to support this consensus practice.</p> <p>More generally in this section of the guidance, we think a distinction should be made between the needs of people admitted to an acute hospital setting and people admitted to a mental health setting. The unique needs of people in mental health crisis is completely</p>

				different and deserves a more bespoke response.	
South London & Maudsley NHS Foundation Trust	Guideline	033	008 - 010	We think it's great to recommend prescribers inform smokers that it might be possible to reduce the dose of some prescribed drugs when they stop smoking, however we think this recommendation can go a little further by stipulating that the information about the interaction between smoking and some prescribed medications is provided in advance of any prescription choices being made, so that the patient can make an informed decision about which treatment option to select and how to best support its effectiveness.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
South London & Maudsley NHS Foundation Trust	Guideline	034	015 - 016	We agree that staff in secondary care and closed institutions who do not want, or are not ready, to stop smoking in one go should be given advice to use medically licensed nicotine-containing products to help them not to smoke immediately before and during working hours. However, we would also like to see this recommendation go further to recommend that staff in these situations are supported to use e-cigarettes. In our experience, where staff have successfully stopped smoking by switching to use an e-cigarette this has proved instrumental as they act as a positive role model for patients and	Thank you for your comment. 				available but we believe this must not be limited to adult smokers – 80% of adult smokers start to smoke before the age of 20, and a significant proportion start before the age of 14, if we only focus on adults we will never get ahead of the curve and will fail in our duty and responsibility to prevent ill health and premature mortality.	
South London & Maudsley NHS Foundation Trust	Guideline	059	010 - 011	Whilst we welcome the recommendation to include nicotine-containing products as options for sale in secondary care settings such as hospital shops, this is not feasible in our hospital settings where only one of the four hospitals has a shop and this has limited opening hours. We know this is an unrealistic expectation for most mental health care settings. We also think it's unreasonable to expect ward staff to be responsible for selling such items, managing stock levels and finances. We also do not support the provision of vending machines for nicotine containing products, as these require careful management and would have to be in an environment where people under age 18 could access.	Thank you for your comment. This is a matter for local commissioning arrangements. The committee considered that secondary care settings should have effective nicotine containing products on sale where possible.
South London & Maudsley NHS	Guideline	061	001	We are pleased to see the recommendation that there is no suggestion that treatment should stop at 4 weeks, but welcome a tailored approach to meet individual needs – this fits	Thank you for your comment.

London Tobacco and Alcohol Research Group				<p>were recently asked by WHO to make a statement in support of the tobacco cessation medications varenicline and bupropion to be added to the WHO Model List of Essential Medicines (WHO EML) and also argued for cytisine to be added. Dr Natalie Walker led the statement, and I co-authored, and reproduce our case here with permission. I believe it should also be considered for review and inclusion by NICE.</p> <p>Varenicline belongs to a class of pharmacotherapies called nicotinic acetylcholine receptors (nAChRs) partial agonists, which combat nicotine addiction by reducing nicotine withdrawal symptoms and cravings through activation of dopaminergic pathways in the brain.<sup>1</sup> Varenicline also competitively inhibits nicotine from binding to nAChRs, thus reducing the reward obtained from tobacco consumption.<sup>1</sup> A Cochrane systematic review of nAChRs partial agonists for smoking cessation found varenicline to be the most effective single-form pharmacotherapy for smoking cessation. <sup>2</sup></p> <p>We believe that if varenicline is added to the WHO EML, then cytisine should also be added. Like varenicline, cytisine is structurally</p>	<p>such is outside the scope of this guideline. Any therapy not licensed in the UK is outlined as an exclusion criterion in the research protocol for evidence review K thus any study pertaining to Cytisine would have been excluded.</p>

				<p>bupropion are not added to the WHO EML, cytisine certainly should be. Quitting tobacco is difficult and people who are tobacco dependent benefit from a choice to assist their quit attempts. The addition of cytisine alongside bupropion and varenicline will improve access to tobacco cessation medications, particularly for tobacco users in low- and middle-income countries (where people are motivated to quit smoking but have no/limited access to cessation medications), and potentially also for indigenous people; and will support 1.3 billion people around the world to quit tobacco use.</p> <p>References 1. Yorkshire Cancer Research	Evidence review K	092	019 - 023	<p>Given the results of the cost effectiveness analysis in Table 14, we do not believe that the committee has given sufficient justification as to why a combination of e-cigarettes and NRT L/S are not included in Guideline Rec 1.12.5. Stop smoking service data between April 2019 and March 2020 from NHS Digital shows that the highest quit rates (74%) were seen when the quit attempt involved people using a licensed medicine and an e-cigarette one after another.<sup>27</sup> We are concerned that by not including this combination in the Guideline that people who smoke may find it difficult to access the most effective combination of cessation aids.</p> <p><sup>27</sup> Public Health England (2016). Use of e-cigarettes in public places and workplaces: Advice to inform evidence-based policy making. Available from: <a href="https://www.gov.uk/government/publications/use-of-e-cigarettes-in-public-places-and-workplaces">https://www.gov.uk/government/publications/use-of-e-cigarettes-in-public-places-and-workplaces</a> [Last accessed June 2020].</p>	<p>Thank you for your comment. The Public Health Advisory Committee (PHAC) considered evidence of effectiveness, cost-effectiveness, barriers and facilitators as well as expert testimony in their deliberations when developing NICE guidelines. The rationale and impact section of the guideline document outlines PHAC's thinking underpinning recommendation 1.12.5. It states that PHAC decided not to recommend some combinations of interventions even though they were as effective as individual options based on their experience, and concerns over adherence rates, the difficulty of obtaining prescriptions for multiple interventions at once and a lack of information on contraindications that made these combinations less feasible than other options.</p> <p>The PHAC agreed that people providing stop smoking support should offer behavioural support alongside any nicotine containing products the person is using, irrespective of whether they are providing the product to give people a better chance of stopping smoking. They also agreed that offering behavioural support to people using nicotine-containing e-cigarettes would increase their chances of stopping smoking.</p>

Yorkshire Cancer Research	Evidence review K	096	033 - 041	<p>1) The title of this paragraph 'Implications of recommending e-cigarettes' and the discussion within this paragraph, implies that the committee recommend that e-cigarettes containing nicotine be made available in secondary care settings. However, there is ambiguity in the wording, since e-cigarettes containing nicotine are not explicitly mentioned, in favour of the term 'nicotine containing products'. This ambiguity is also seen in Rec 1.22.14 (pg 59, line 10) and on pg 88, line 24 of the Guideline. Making it explicit that e-cigarettes containing nicotine should be offered as part of a stop smoking service in secondary care presents an important opportunity to support smokers in these settings with the most popular and one of the most effective quitting aids and is a policy recommendation we would welcome and support.</p> <p>In addition, we suggest that the example of e-cigarettes containing nicotine being sold in hospital shops be expanded to include the suggestion that e-cigarettes containing nicotine could also be provided free of charge to smokers at the same location via a voucher funded by local commissioners/stop smoking</p>	<p>Thank you for your comment. The glossary defines 'nicotine-containing products'. The definition has been amended to make clear it includes nicotine containing e-cigarettes. Recommendation 1.11.4 outlines the offer of advice on using nicotine-containing products on general sale with reference to nicotine-replacement therapy and nicotine-containing e-cigarettes. Recommendation 1.12.1 outlines that nicotine-containing e-cigarettes should be accessible to adults who smoke and recommendation 1.12.5 highlights that nicotine containing e-cigarettes are more likely to result in successful quit attempts when combined with behavioural support. Recommendation 1.12.13 to 1.12.17 outline the advice that should be provided by people providing stop-smoking advice support or advice regarding nicotine-containing e-cigarettes. Based on the evidence and testimony considered by PHAC they did not make a recommendation regarding the free of charge provision of nicotine-containing e-cigarettes to smokers via vouchers or otherwise.</p>

				<p>services. This would ensure that smokers experiencing higher levels of deprivation, who are more likely to be admitted into secondary care for longer periods<sup>28</sup> and who may find the cost of these products prohibitive, are offered the best chance of quitting successfully, for good. This is particularly important in reducing health inequalities.</p> <p><sup>28</sup> Luben, R., Hayat, S., Khawaja, A. <i>et al.</i>, (2019). Residential area deprivation and risk of subsequent hospital admission in a British population: the EPIC-Norfolk cohort. <i>BMJ Open</i>, 9, e031251. doi: 10.1136/bmjopen-2019-031251</p>	
Yorkshire Cancer Research	Evidence review K	099	032	<p>(Related to rec 1.12.1 in draft guideline) We are concerned that relying on local decision making for how the accessibility of e-cigarettes is defined will result in a 'post code lottery' of service provision that will widen health inequalities. There is growing evidence that e-cigarettes have the potential to reduce health inequalities by effectively supporting smokers in lower socioeconomic groups and those with mental health conditions to quit. However, the cost of buying these products in vape shops can be prohibitive. This advice also contradicts that of Public Health England in their 2021 Vaping in England evidence review which states that '<i>Local authorities should continue to</i></p>	<p>Thank you for your comment. The reviews in this guideline did not look at evidence about the most effective ways of making nicotine-containing e-cigarettes accessible for cessation. The committee agreed that decisions about how to make e-cigarettes accessible should be made at a local level dependent on how stop smoking services and other relevant settings are set up and link together. To facilitate this the guideline makes recommendations on commissioning and designing services (1.22) outlining that integrated care systems plans, health and wellbeing strategies, and other relevant local strategies and plans make a range of</p>

				<i>fund and provide stop smoking services and all stop smoking services should have a consistent approach to using vaping products.'</i> <sup>ix</sup>	interventions (including nicotine-containing e-cigarettes) accessible to adults who smoke. This is consistent with advice from PHE.
Yorkshire Cancer Research	Guideline	General	General	We suggest that the term 'e-cigarette(s)' is replaced with 'vaping product(s)'. E-cigarette is a term that was commonly used when the first devices became available. These devices resembled tobacco cigarettes, but there has since been a rapid evolution of the technology and products. The shape of the products now varies enormously. Furthermore, the word 'cigarette' is associated with harm, whereas the evidence is clear that e-cigarettes are far less harmful than tobacco cigarettes. Because of these two points, we believe that the term e-cigarette is no longer appropriate or accurate. We are also concerned that the continued use of this terminology exacerbates the misconceptions that e-cigarettes are equally or more harmful than tobacco cigarettes, still incorrectly perceived by 32% of the adult population. <sup>4</sup> Since 2020, Public Health England have used the term vaping products in their annual Vaping in England evidence updates and we believe it is important that NICE leads by example in the use of its terminology. <sup>23</sup> For the purpose of this	Thank you for your comment. The term e-cigarettes was decided on during the scoping phase of this guideline. The committee considered your comments and have not changed the term 'e-cigarettes' to 'vaping products'. The glossary defines e-cigarettes and outlines that they are also called electronic cigarettes or vaping devices. The glossary definition is hyperlinked throughout the guideline document and PHAC considered this to be sufficient.

				document, we use the term 'e-cigarette' as per NICE's nomenclature. <sup>23</sup> Public Health England (2021). Vaping in England: an evidence update including vaping for smoking cessation, February 2021. Available from: <a href="https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/962221/Vaping_in_England_evidence_update_February_2021.pdf">https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/962221/Vaping_in_England_evidence_update_February_2021.pdf</a> [Last accessed February 2021].	
Yorkshire Cancer Research	Guideline	053 - 055		Rec 1.21 – we are concerned that the smokefree policy section has not been updated in line with the inclusion of e-cigarettes in Rec.1.12.1 and 1.12.5. Vaping is not covered by UK smokefree laws, which prohibit smoking in enclosed public places and workplaces and is left to organisations to decide their policy on an individual basis. We believe that without guidance, in line with the recommendations proposed by Public Health England, <sup>27</sup> smokefree policies will continue to be prohibitive to those engaging in a quit attempt using e-cigarettes and may result in smoking relapse. <sup>27</sup> Public Health England (2016). Use of e-cigarettes in public places and workplaces: Advice to inform evidence-based policy making. Available from:.	Thank you for your comment. This comment relates to a greyed-out area of the guideline and is outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.

				<a href="https://www.gov.uk/government/publications/use-of-e-cigarettes-in-public-places-and-workplaces">https://www.gov.uk/government/publications/use-of-e-cigarettes-in-public-places-and-workplaces</a> [Last accessed June 2020].	
Yorkshire Cancer Research	Guideline	022	024	Rec 1.12.1. - We welcome the inclusion of e-cigarettes within the Guideline as a recommended stop smoking aid. This inclusion provides an important opportunity to effectively support the 7 million smokers in England to quit for good. We are, however, concerned that the term 'accessible' will not go far enough to enact service delivery change and would therefore recommend the term 'offered'.	Thank you for your comment. The committee was aware that local areas have very different commissioning arrangements for smoking cessation and agree that the most important thing was ensure that people had access to the range of interventions. The recommendation begins 'Ensure' and is therefore a strong recommendation.
Yorkshire Cancer Research	Guideline	026	003 - 004	Rec. 1.12.14 - We would recommend that this line also acknowledges the substantial reduction in the risk of vapour to bystanders in comparison to smoking. This has been identified by Public Health England's 2018 Evidence review of e-cigarettes and heated tobacco products <sup>25</sup> and more recently the 2020 Committee on Toxicity of Chemicals in Food, Consumer Products, and the Environment report. <sup>26</sup> We recommend that line 3-4 is changed to 'use of vaping products are likely to be substantially less harmful than smoking for those who smoke and the people around them'. <sup>25</sup> Committee on Toxicity of Chemicals in Food, Consumer Products and the Environment (2020). Statement on the	Thank you for your comment. The outcomes for the evidence review did not include effects on bystanders. As the evidence has not been reviewed, the committee are unable to make recommendations in this area.

**25 June to 6 August 2021**

Stakeholder	Document	Page No	Line No	Comments	Developer's response
Yorkshire Cancer Research	Guideline	059	010	Rec 1.22.14 – In line with our suggestions made in Comment 27, we recommend that the line 'Include nicotine containing products as options for sale in secondary care settings (for example in hospital shops)' be changed to 'Include nicotine-containing products, including e-cigarettes, as options for sale and offered free of charge, funded by local commissioners or stop smoking services via a voucher, in secondary care settings (for example in hospital shops)' to prevent ambiguity and be in keeping with the recommendations made in evidence review K, pg 96, line 40-41.	Thank you. Nicotine containing products is defined in the glossary section of the guideline. The definition of nicotine containing products has been amended to clarify that it includes nicotine containing e-cigarettes.
Yorkshire Cancer Research	Guideline	088	024	We recommend that this line be changed to 'The committee agreed that nicotine containing products, including e-cigarettes, should be available in secondary care settings...' to align with what is written in evidence review K, pg. 96 lines 40-41 and prevent any ambiguity.	Thank you. Nicotine containing products is defined in the 'terms used in this guideline' section. The definition of nicotine containing products has been amended to clarify that it includes nicotine containing e-cigarettes.
Yorkshire Cancer Research	Guideline	088	024	Rec 1.21 – In line with the recommendations made in Comments 27-29, the smokefree policy recommendations (Rec 1.21) must be updated to ensure that vaping is identified as a separate activity to smoking and not prohibited in smokefree policies, including those in secondary care settings.	Thank you. The recommendations in 1.21 are a greyed-out area of the guideline and outside of the scope for this update. Please see the <a href="#">scope document</a> on the NICE website.
