Final

**Disabled children and young people up to 25 with severe complex needs: integrated service delivery and organisation across education, health and social care**

**[H] Evidence review for preparation for employment**

*NICE guideline NG213*

*Evidence reviews*

*March 2022*

*Final*

*These evidence reviews were developed by the National Guideline Alliance which is a part of the Royal College of Obstetricians and Gynaecologists*

## **Disclaimer**

The recommendations in this guideline represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, professionals are expected to take this guideline fully into account, alongside the individual needs, preferences and values of their patients or service users. The recommendations in this guideline are not mandatory and the guideline does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and/or their carer or guardian.

Local commissioners and/or providers have a responsibility to enable the guideline to be applied when individual health professionals and their patients or service users wish to use it. They should do so in the context of local and national priorities for funding and developing services, and in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities. Nothing in this guideline should be interpreted in a way that would be inconsistent with compliance with those duties.

NICE guidelines cover health and care in England. Decisions on how they apply in other UK countries are made by ministers in the [Welsh Government](#), [Scottish Government](#), and [Northern Ireland Executive](#). All NICE guidance is subject to regular review and may be updated or withdrawn.

# Preparation for employment

## Recommendations supported by this evidence review

This evidence review supports recommendations 1.13.1 - 1.13.11, 1.17.14. Other evidence supporting these recommendations can be found in the evidence reviews on Views and experiences of service providers (evidence report M).

## Review question

What are the most effective models of health, social care and education services working together to prepare disabled children and young people with severe complex needs for employment?

## Introduction

The review aims to identify the most effective models where health, social care and education services work together to prepare disabled children and young people with severe complex needs for employment.

At the time of scoping and developing the review protocols, documents referred to health, social care and education in accordance with NICE style. When discussing the evidence and making recommendations, these services will be referred to in the order of education, health and social care for consistency with education, health and care plans.

## Summary of the protocol

See Table 1 for a summary of the Population, Intervention, Comparison and Outcome (PICO) characteristics of this review.

**Table 1: Summary of the protocol (PICO table)**

<b>Population</b>	Disabled children and young people from birth to 25 years with severe complex needs requiring health, social care and education support
<b>Intervention</b>	<p>Any joint-working practices to prepare disabled children and young people with severe complex needs for employment.</p> <p>For example:</p> <ul style="list-style-type: none"> <li>• Supported internships and traineeships</li> <li>• Local authority independent travel training (involves multi agency assessment)</li> <li>• NHS learning disability employment program</li> <li>• Job coaching (e.g. adult services, access to work, DWP)</li> <li>• Curriculum and accreditation provider (e.g. T-levels and ASDAN)</li> <li>• Work experience coordinators</li> <li>• CEIAG (Careers education information advice and guidance)</li> <li>• Personalised budgets</li> <li>• Visual support hierarchy recommendations</li> <li>• Short breaks/respite care (those which support employment)</li> <li>• EHC plans (including goal setting)</li> <li>• Named responsible practitioner (e.g., keyworker, single point of contact, lead professional, named coordinator, transition lead)</li> <li>• Follow on support</li> <li>• Arrangements/links with third sector/community organisations (e.g., chambers of commerce and employment organisations)</li> </ul>
<b>Comparison</b>	<ul style="list-style-type: none"> <li>• Any other joint-working practices to prepare disabled children and young people with severe complex needs for employment</li> <li>• Separate practices to prepare disabled children and young people with severe complex needs for employment</li> <li>• No specific practices to prepare disabled children and young people with severe complex needs for employment</li> </ul>

<b>Outcome</b>	<b>Critical</b> <ul style="list-style-type: none"><li>• Progress into employment (including paid or voluntary employment, work experience or trials, apprenticeships, job shadowing, traineeships, internships, student placements, sector-based work academy placements)</li><li>• Independence as measured by validated scales</li><li>• Competence (measured as Capability/Confidence to meet expectations in an identified workplace)</li></ul> <b>Important</b> <ul style="list-style-type: none"><li>• Self-efficacy as measured by validated scales</li><li>• Successful completion of independent travel training (which is individually tailored)</li><li>• Competence in skills relevant to job search and self-promotion in recruitment and selection processes</li></ul>

*ASDAN: award scheme development and accreditation network; CEIAG: careers education information advice and guidance; DWP: Department for work and pensions; EHC: education, health and care; NHS: national health service.*

For further details, see the review protocol in appendix A.

## Methods and processes

This evidence review was developed using the methods and process described in [Developing NICE guidelines: the manual](#). Methods specific to this review question are described in the review protocol in appendix A and the methods document (Supplement A).

Declarations of interest were recorded according to [NICE's conflicts of interest policy](#).

## Effectiveness evidence

### Included studies

Five studies were included for this review; 1 randomised controlled trial (Carter 2009), 1 quasi-RCT (Izzo 2000), and 3 non-randomised studies (McVeigh 2017, Winsor 2007 and Yamatani 2015).

The included studies are summarised in Table 2.

Three studies examined arrangements/links with third sector/community organisations as the intervention (Carter 2009, McVeigh 2017 and Winsor 2007). Of these, 1 study compared a multicomponent intervention package to typical transition education (Carter 2009); 1 study examined a Show-Me-Careers initiative which supported seamless transitions to integrated employment through a Practice Informing Policy-Policy Enabling Practice framework (McVeigh 2017); and 1 study compared a Jobs by 21 Partnership Project to nonparticipants and to no partnership project county clients (Winsor 2007).

One study examined a named responsible practitioner as the intervention (Yamatani 2015), specifically a Career Transition Liaison Project.

One study examined follow on support as the intervention (Izzo 2000), whereby the extension of transition services beyond graduation was compared to transition services ceasing at graduation.

See the literature search strategy in appendix B and study selection flow chart in appendix C.

## Excluded studies

Studies not included in this review are listed, and reasons for their exclusion are provided in appendix J.

## Summary of studies included in the effectiveness evidence

Summaries of the studies that were included in this review are presented in Table 2.

**Table 2: Summary of included studies.**

Study	Population	Intervention	Comparison	Outcomes	Comments
Carter 2009 RCT USA	N=67  Youth receiving special education services under the primary or secondary disability category of cognitive disability, autism, or multiple disabilities	<u>Multicomponent Intervention Package</u>  Five strategies including; 1) summer-focused planning (assist youth to connect to specific summer work and other community experiences that might further their transition education); 2) community connectors (a person at each school to serve in the role); 3) employer liaisons (a person to serve in the role in the community); 4) community conversations (events to foster dialogue around ways that schools, businesses, agencies, organizations, families, youth, and others could work together to expand the employment opportunities and identify new partners willing to collaborate with participating schools); 5) resource mapping (identifying and compiling resources that might be harnessed to improve outcomes)	<u>Typical transition education</u>  Not described	<ul style="list-style-type: none"> <li>Progress into employment</li> </ul>	The extent to which each of the five strategies was used with each participant varied by community and by each student's need

	Disabilities funded services	Division of Vocational Rehabilitation, school administrators and teachers, employment vendors, family members, and young adults) that best met counties local needs, and develop specific employment and career activities that incorporated both school personnel and adult supported employment vendors	but did not participate in their county's project  <u>No Partnership Project county clients</u>  Division of Developmental Disabilities eligible students who lived in counties that did not receive Partnership Project funds		
Yamatani 2015  Non RCT (mixed methods evaluation)  USA	N=12  Employees with disabilities	<u>Career Transition Liaison Project</u>  A full-time career transition liaison that worked directly with the employer's human resources personnel, trainers, supervisors, and other employees to maintain a supportive culture for workers with disabilities, and provided a number of additional support services, including coordination with school and community job coaches, trainers, and refinement of the training program for the employer's team leaders (primarily supervisors of employees)	Before versus after intervention	• Competence	The type of disability, and age of the participants were not reported. The employer hired individuals identified by their high schools or vocational schools as having a disability and participants were described as 'youth'.

*FY: fiscal year; IDD: intellectual and developmental disabilities; RCT: randomised controlled trial:*

See the full evidence tables in appendix D. No meta-analysis was conducted (and so there are no forest plots in appendix E).

## Summary of the effectiveness evidence

Overall, there was evidence of an important benefit of arrangements/links with third sector/community organisations for progress into employment. This included a multicomponent intervention package (when progress into employment was measured by participation in paid or unpaid community based work, paid competitive jobs, unpaid jobs, and those that did not work at any point during the summer, however there was evidence of an important harm when measured by exclusively held sheltered jobs shown by a meaningful reduction in employed participants in the intervention group), a Show-Me-Careers initiative, and a Jobs by 21 Partnership Project (when compared to both students living in counties receiving Partnership Project funds but not participating in the project, and students who lived in counties not receiving Partnership Project funds). There was also evidence of an important benefit, in terms of increased competence, of a named responsible practitioner, specifically a Career Transition Liaison Project which included a full-time career transition liaison and follow-on support including the extension of transition services beyond graduation for independence (when independence was measured by active in social groups, has savings or current account, and has credit cards, but not when measured by registered to vote or married). Further, there was evidence of an important harm when independence was measured by those participants with a driver's license shown by a meaningful reduction in participants with a license in the intervention group).

Overall, the evidence was very low to low quality due to concerns about risk of bias, indirectness and imprecision. Studies failed to report on any important outcomes including self-efficacy, successful completion of independent travel training (which is individually tailored), and competence in skills relevant to job search and self-promotion in recruitment and selection processes. Studies failed to report on a number of interventions of interest, for example, supported internships and traineeships, local authority independent travel training, NHS learning disability employment program, work experience coordinators, and short breaks/respite care (those which support employment).

See appendix F for full GRADE tables.

## Economic evidence

### Included studies

A systematic review of the economic literature was conducted but no economic studies were identified which were applicable to this review question.

A single economic search was undertaken for all topics included in the scope of this guideline. See Supplement B for details.

### Excluded studies

Economic studies not included in this review are listed, and reasons for their exclusion are provided in appendix J.

## Summary of included economic evidence

No economic studies were identified which were applicable to this review question.

## Economic model

No economic modelling was undertaken for this review because the committee agreed that other topics were higher priorities for economic evaluation.

## **Evidence statements**

### **Economic**

No economic studies were identified which were applicable to this review question.

## **The committee's discussion and interpretation of the evidence**

### **The outcomes that matter most**

The outcomes progress into employment, independence and competence were prioritised as critical outcomes by the committee. Employment was prioritised because identifying joint-working practices to support employment was the primary focus of this review. Independence and competence were selected as critical outcomes because they represent benefits of employment which impact on quality of life.

The outcomes self-efficacy, successful completion of independent travel training and competence in skills relevant to job search and self-promotion in recruitment and selection processes were selected as important outcomes. These were important outcomes because they are part of the pathway towards employment, whereas employment itself may be applicable to a narrower population of disabled children and young people with severe complex needs.

### **The quality of the evidence**

The quality of the evidence was assessed with GRADE and was rated as very low to low. Concerns about the risk of bias were "very serious". The most serious concerns for the RCT and quasi-RCT were bias arising from the randomisation process, deviations from intended interventions, and missing outcome data. The most serious concerns for the non-randomised, interrupted time series studies were biases arising from the intervention independent of other changes, shape of the intervention effect pre-specified, intervention unlikely to affect data collection, knowledge of the allocated interventions adequately prevented during the study, and other risks of bias. The most serious concerns for the non-randomised cohort study were confounding, selection of participants into the study, measurement of outcomes, and selection of the reported result. There were "no serious" concerns about inconsistency. This was because only one study reported each outcome of interest. Concerns about indirectness ranged from "no serious" to "serious" indirectness. For all outcomes rated as "serious", this was due to an indirect aspect of the PICO (population) in 1 study. Concerns about imprecision ranged from "no serious" to "very serious". This was due to the 95% confidence intervals crossing boundaries for minimally important differences.

### **Benefits and harms**

There was evidence of an important benefit of arrangements/links with third sector/community organisations (multicomponent intervention package, show-me-careers initiative and jobs by 21 partnership project) in the progress into employment for disabled children and young people with severe complex needs. The evidence was very low and low quality. The committee agreed with the evidence and discussed how important it is that the local authority provide information about employment support in the SEND Local Offer [1.17.14] in order to help disabled children and young people with severe complex needs move into adulthood, as required by the SEND Regulations 2014 and guidance in the SEND Code of Practice (2015). The committee explained how employment might be a daunting prospect for disabled children and young people with severe complex needs but how this can be reduced when local authorities make the process clear and transparent.

The committee discussed the current variation where some localities provided a guided questionnaire that assisted disabled children and young people with severe complex needs

and their families in navigating the employment options set out in the SEND Local Offer, whilst others did not. The committee acknowledged that sometimes the information provided was not easily understandable. The committee recommended that education providers ensure that independent Careers Information, Advice and Guidance on employment is provided using the Gatsby benchmarks of Good Career Guidance (as included in statutory guidance from the Department for Education on careers guidance and advice), in order to help young people think about their employment options and make informed decisions about their future [1.13.1].

There was evidence of a benefit in the competence (capability to meet expectations in an identified workplace) of disabled young people with severe complex needs when provided with a named responsible practitioner, specifically a full-time career transition liaison. The evidence was very low quality. Based on their experience, the committee agreed that an essential component of supported internships is the provision of support to the young person by a lead employment practitioner, often called a job coach, with expertise related to employment of young people with disabilities. This lead practitioner provides 1:1 support to the intern, to coach them on the satisfactory level of performance in skills and operations that are required by the work place. Without this support, the committee felt strongly that achieving employment outcomes would be much less likely to be successful. The committee also noted that in order for each young person undertaking a supported internship to have this lead employment practitioner, this would need to be included as a requirement in the service specification for commissioning employment support services and this was reflected in the recommendation. The committee discussed, based on their experience, that the lead employment practitioner function would usually be fulfilled by an individual with the role of job coach. However, the committee discussed that the term job coach is not well understood across health, education and social care and there are other roles that could undertake this function, so they only gave it as an example in the recommendation [1.13.3]. The committee also agreed that young people who had employment as an outcome in their EHC plan, but who were not undertaking a supported internship would also be likely to benefit from the 1:1 support provided by a lead employment practitioner and more likely to achieve their employment outcomes, so they made a weaker recommendation for this to happen [1.13.4].

The committee agreed, based on their experience, that discussions about employment as a future option should begin early so that if this is something the child or young person wishes to explore, preparation can also start early, facilitating achievement of the best possible outcomes as specified in section 8 of the SEND Code of Practice (2015). However they noted that this does not always happen and relayed examples of parents and carers self-researching employment options at the point when the young person is looking to achieve employment, due to a lack of information and preparation provided beforehand. This was supported by qualitative evidence where both service users and providers reported that preparations for adulthood are insufficient, inconsistent and left too late (see evidence report K, sub-theme 17.1). The committee agreed that in line with their understanding of the SEND Code of Practice (2015) discussions should start at the latest when the child is around 13 to 14 years of age, when the year 9 review would take place, but preferably earlier. The committee also agreed that tailored follow-up discussion is needed as the young person may change their career aspirations as they mature [1.13.5].

Based on their experience, the committee discussed the benefits of vocational profiles in helping to understand the needs, skills and aspirations of disabled children and young people with severe complex needs who are considering employment. A number of committee members felt that the term vocational profile was not widely understood, and it was agreed that in practice a lot of those working in education, health and social care do not always use them. Due to the fact that vocational profiles would be particularly useful and beneficial for disabled children and young people with severe complex needs who want to achieve employment, the committee agreed a recommendation was needed to raise awareness of vocational profiles amongst professionals and encourage individuals working in education, health and social care to use them [1.13.6].

The committee discussed the importance of practitioners from all services working together to ensure that employment support holistically matches the needs of the young person. In their experience, if practitioners do not consider what support is needed outside their specific expertise to bridge the gaps between different services, this may create barriers to the young person effectively participating in employment support and sometimes even cause risk to the young person. The committee felt strongly that practitioners should do this so that the onus for providing comprehensive employment support doesn't fall on the young person and their family or carers [1.13.7]. Identifying any environmental adaptations or equipment that will be needed for the young person to perform in the same way as their peers will be particularly important to prevent inequalities.

No evidence was identified about supported internships, however there was evidence of a benefit of follow-on support (extension of transition services beyond successful completion of the programme) in the independence of disabled young people with severe complex needs. The committee agreed that the components of the follow-on support intervention such as a structured intervention prior to individualised applications (e.g. interview skills) were similar to those produced in supported internship programs in the UK, and felt it appropriate to extrapolate the evidence in order to make recommendations. Although they were not identified by the evidence searches because they did not meet the inclusion criteria, the committee were aware of evaluations of supported internship programmes, designed to help young people with learning disabilities acquire the capabilities needed to gain employment, that have been undertaken by the Department of Education and UK Government. These evaluations concluded that supported internships are effective at helping young people with severe complex needs to obtain employment. Progress into employment is one of the preparation for adulthood outcomes covered by the SEND code of practice. All children and young people with severe complex needs must have a focus on all four preparation for adulthood outcomes in their EHC plan from year 9 onwards. However, without assistance, young people with severe complex needs have a very low likelihood of progressing to employment. The committee felt strongly that supported internships would be an effective way to help young people into employment and therefore recommended that they are made available. [1.13.2]. Supported internships are cited in the SEND Code of Practice (2015) as a way for young people with special educational needs to get direct experience of work and help prepare them for employment.

There was evidence of a benefit of arrangements/links with third sector/community organisations (multicomponent intervention package, show-me-careers initiative and jobs by 21 partnership project) in the progress into employment for children and young people. The evidence was very low and low quality. The committee agreed based on this evidence and their experience that once a young person has completed a supported internship they will still have other hurdles to negotiate to get a job as they will be competing with non-disabled individuals. In the committee's experience, there is a need for supported internship providers to create links with local employers and encourage them to buy-in to provide or expand the opportunities available to disabled young people with severe and complex needs. Also that mechanisms should be in place whereby links with potential employers were actively pursued. Doing this will support employers to make reasonable adjustments around recruitment [1.13.8].

The committee agreed that as part of supported internships it was important to plan ahead so that the experiences gained from the internship can be used in a meaningful way, such as enabling the young person to enter into paid or volunteer work once the internship ends. Since the young person should still have an EHC plan in place until securing employment, the committee agreed that the planning of next steps should occur prior to ceasing the EHC plan, and be facilitated between the current provider and prospective employer to ensure continuity. They therefore made a recommendation about how to plan support for the young person after the internship ends [1.13.9].

From their experience, the committee discussed the benefit of both support workers and job coaches in supporting the young person during their employment, specifically by acting as a first point of contact, and providing information, advice, and emotional support. The committee agreed that young people and their families are not always aware that this support is available and so made a recommendation for local authorities to signpost to these services in the SEND Local Offer [1.13.10]. It is a requirement of the SEND Regulations 2014 that the SEND Local Offer contains information about all services available in that local area. In addition, the committee discussed the role of workplace buddies, that is a colleague that can act as a friendly face for the young person during their work day. A workplace buddy might support the young person by providing them with information about the structure of the workplace and teams, introducing them to colleagues, showing them around the office and having lunch with them on a daily basis. The committee agreed that the role of a workplace buddy should not be a line manager because the young person has to be able to share their anxieties with their buddy so they can receive effective support before this results in a performance issue. Therefore, someone independent is needed to do this. The committee felt strongly that a colleague assigned to support the disabled young person would enable the employment situation to run smoothly for both parties so recommended that employers are encouraged to train and appoint workplace buddies for disabled young people [1.13.11].

### **Cost effectiveness and resource use**

There was no existing economic evidence in this area.

The committee discussed supported internships and explained that there is funding available from the Education Skills Funding Agency, Department for Work and Pensions and social care adult services for young people to access supported internships. The committee explained that there are multiple providers across the country in response to the UK government policy. The committee explained that recommendations on making supported internships available are more about changing practice to ensure consistent delivery, coordination and improved outcomes, using existed allocated funding and so recommendations would therefore not incur additional resources to services. Similarly, the recommendations about planning after an internship ends would not have additional resource implications because this would happen as part of the support specified in the individuals EHC plan. The committee also noted that, whilst funding already exists for supported internship teams to function, not all areas have them and there is inconsistency in which sector takes responsibility for setting them up. Therefore, the recommendations would require a change in practice but not incur additional resources.

The committee discussed the recommendation on assigning a practitioner to lead on employment support for young people undertaking a supported internship. The committee noted that there are existing trained professionals to do this job. With supported internships, dedicated job coaches would take on this role. However, many people who are not trained are still delivering such employment support. The committee explained that job coaches/adult social care employment support teams/employment officers should exist everywhere; but that services may call them different things. The committee reiterated that it is important that the person leading on employment support is someone who has been trained in employment support. It is essential to have someone trained because of the complexity of this group of young people. It isn't as simple as helping them write a CV or getting some work experience. There is tailored and bespoke knowledge that is needed to support young people with complex needs into work. And if a practitioner hasn't been trained and doesn't have the required skills, for example, in job coaching or some other specific support models, that young person won't pick up the required skills as quickly, and they won't be successful in going into or sustaining employment / paid work. Additional people will need to be trained in order to provide this support to young people who are undertaking a supported internship. Further practitioners will need to be trained if local authorities also decide to provide a lead employment practitioner to those young people who have employment as an outcome in their

EHC plan. However, because this is an outcome in the EHC plan, funding already exists to enable this training to happen. Therefore there will not be a significant resource implication.

In relation to the recommendation for local authorities to include information about support workers and job coaches in their SEND Local Offer, the committee agreed this was unlikely to have resource implications as it is about information provision. Additionally they noted that funding is already available to provide support workers and job coaches through the Access to Work scheme run by the Department for Work and Pensions so if a young person decides they would like to have this additional support there should not be any cost implications of doing so.

The committee discussed the recommendation about having a vocational profile for young people who are considering employment. Use of vocational profiles will be a change in practice for those services that do not currently use them. However, preparation for adulthood is a key component of the SEND Code of Practice. Vocational profiles are a way to do the work that is already needed to help young people who have employment identified within their preparation for adulthood transition planning. Therefore there are not expected to be significant resource implications of this change in practice.

The committee believed that other recommendations in this area represent current good practice and are not anticipated to result in additional resource use to services.

### **Recommendations supported by this evidence review**

This evidence review supports recommendations 1.13.1 - 1.13.11, 1.17.14. Other evidence supporting these recommendations can be found in the evidence reviews on Views and experiences of service providers (evidence report M).

# Appendices

## Appendix A – Review protocol

**Review protocol for review question: What are the most effective models of health, social care and education services working together to prepare disabled children and young people with severe complex needs for employment?**

**Table 3: Review protocol**

ID	Field	Content
0.	PROSPERO registration number	CRD42020167078
1.	Review title	What are the most effective models of health, social care and education services working together to prepare disabled children and young people with severe complex needs for employment?
2.	Review question	What are the most effective models of health, social care and education services working together to prepare disabled children and young people with severe complex needs for employment?
3.	Objective	To identify the most effective models where health, social care and education services work together to prepare disabled children and young people with severe complex needs for employment
4.	Searches	<p>The following databases will be searched:</p> <ul style="list-style-type: none"> <li>• Cochrane Central Register of Controlled Trials (CENTRAL)</li> <li>• Cochrane Database of Systematic Reviews (CDSR)</li> <li>• Embase</li> <li>• MEDLINE</li> <li>• Health Technology Assessment (HTA)</li> <li>• Database of Abstracts of Reviews of Effects (DARE)</li> <li>• British Education Index (BEI)</li> <li>• Educational Information Resources Center (ERIC)</li> <li>• Health Management Information Consortium (HMIC)</li> <li>• Applied Social Science Index and Abstracts (ASSIA)</li> <li>• Social Care Online</li> <li>• Social Policy and Practice</li> <li>• Social Science Citation Index</li> <li>• Social Services Abstracts</li> <li>• Sociological Abstracts</li> </ul>

ID	Field	Content
		<ul style="list-style-type: none"> <li>• PsycINFO</li> <li>• CINAHL</li> <li>• Emcare</li> </ul> <p>Searches will be restricted by:</p> <ul style="list-style-type: none"> <li>• Date: 2000 onwards</li> <li>• Language: English</li> <li>•</li> </ul> <p>Other searches:</p> <ul style="list-style-type: none"> <li>• Inclusion lists of systematic reviews</li> <li>• Kings Fund Reports (<a href="https://www.kingsfund.org.uk/publications">https://www.kingsfund.org.uk/publications</a>)</li> <li>• National Audit Office</li> <li>• Audit Commission</li> <li>• Open Grey (if insufficient studies are found from other sources)</li> </ul> <p>The full search strategies for all databases will be published in the final review.</p>
5.	Condition or domain being studied	Disabled children and young people from birth to 25 years with severe complex needs requiring health, social care and education support.
6.	Population	<ul style="list-style-type: none"> <li>• Inclusion: Disabled children and young people from birth to 25 years with severe complex needs requiring health, social care and education support</li> <li>• Exclusion: Disabled children and young people who do not have needs in all three areas of health, social care and education.</li> </ul>
7.	Intervention/Exposure/Test	<p>Any joint-working practices to prepare disabled children and young people with severe complex needs for employment.</p> <p>For example:</p> <ul style="list-style-type: none"> <li>• Supported internships and traineeships</li> <li>• Local authority independent travel training (involves multi agency assessment)</li> <li>• NHS learning disability employment program</li> <li>• Job coaching (e.g. adult services, access to work, DWP)</li> <li>• Curriculum and accreditation provider (e.g. T-levels and ASDAN)</li> <li>• Work experience coordinators</li> <li>• CEIAG (Careers education information advice and guidance)</li> <li>• Personalised budgets</li> <li>• Visual support hierarchy recommendations</li> </ul>

ID	Field	Content
		<ul style="list-style-type: none"> <li>• Short breaks/respite care (those which support employment)</li> <li>• EHC plans (including goal setting)</li> <li>• Named responsible practitioner (e.g., keyworker, single point of contact, lead professional, named coordinator, transition lead)</li> <li>• Follow on support</li> <li>• Arrangements/links with third sector/community organisations (e.g., chambers of commerce and employment organisations)</li> </ul>
8.	Comparator/Reference standard/Confounding factors	<ul style="list-style-type: none"> <li>• Any other joint-working practices to prepare disabled children and young people with severe complex needs for employment</li> <li>• Separate practices to prepare disabled children and young people with severe complex needs for employment</li> <li>• No specific practices to prepare disabled children and young people with severe complex needs for employment</li> </ul>
9.	Types of study to be included	<p>Systematic reviews of RCTs or non-randomised comparative studies (including cohort studies, before and after studies and interrupted time series), and RCTS will be included. Non-randomised studies will be included in the absence of RCTs for a given class of interventions. Service evaluations, process evaluations and audits will be included in the absence of comparative non-randomised studies.</p> <p>Conference abstracts will not be included.</p> <p>Non-randomised studies should adjust for confounders in their analysis such as: dominant provision (e.g. primarily autism, primarily physical disability), definitions of eligibility for service (e.g. for primary SEN), socioeconomic status. Studies will be downgraded for risk of bias if important confounding factors are not adequately adjusted for but will not be excluded for this reason.</p>
10.	Other exclusion criteria	<p>Studies will not be included for the following reasons:</p> <ul style="list-style-type: none"> <li>• Published prior to 2000</li> <li>• Not published in the English language</li> <li>• Non Organisation for Economic Co-operation and Development (OCED) country (<a href="https://www.oecd.org/about/members-and-partners/">https://www.oecd.org/about/members-and-partners/</a>)</li> </ul> <p>Studies published prior to 2000 will not be considered due to legislative changes, specifically the Children and Families Care Act 2014, and the Aiming High for Disabled Children (AHDC) programme 2007.</p> <p>Studies published in languages other than English will not be considered due to time and resource constraints with translation.</p> <p>Studies published by non OCED countries will not be considered due to differences in health, social care and education services to those implemented in the UK.</p>

ID	Field	Content
11.	Context	<p>All settings will be considered where health, social care and education is provided for disabled children and young people from birth to 25 years with severe complex needs.</p> <p>In addition, settings that collaborate with health, social care and education providers to provide work experience and employment opportunities for disabled children and young people from birth to 25 years with severe complex needs will be considered.</p>
12.	Primary outcomes (critical outcomes)	<p>Critical Outcomes:</p> <ul style="list-style-type: none"> <li>• Progress into employment (including paid or voluntary employment, work experience or trials, apprenticeships, job shadowing, traineeships, internships, student placements, sector-based work academy placements)</li> <li>• Independence as measured by validated scales</li> <li>• Competence (measured as Capability/Confidence to meet expectations in an identified workplace)</li> </ul>
13.	Secondary outcomes (important outcomes)	<p>Important Outcomes:</p> <ul style="list-style-type: none"> <li>• Self-efficacy as measured by validated scales</li> <li>• Successful completion of independent travel training (which is individually tailored)</li> <li>• Competence in skills relevant to job search and self-promotion in recruitment and selection processes</li> </ul>
14.	Data extraction (selection and coding)	<p>All references identified by the searches and from other sources will be uploaded into STAR and de-duplicated.</p> <p>Titles and abstracts of the retrieved citations will be screened to identify studies that potentially meet the inclusion criteria outlined in the review protocol.</p> <p>Full versions of the selected studies will be obtained for assessment. Studies that fail to meet the inclusion criteria once the full version has been checked will be excluded at this stage. Each study excluded after checking the full version will be listed, along with the reason for its exclusion.</p> <p>A standardised form will be used to extract data from studies. The following data will be extracted: study details (reference, country where study was carried out, type and dates), participant characteristics, inclusion and exclusion criteria, details of the interventions, setting and follow-up, relevant outcome data and source of funding. One reviewer will extract relevant data into a standardised form, and this will be quality assessed by a senior reviewer.</p>
15.	Risk of bias (quality) assessment	<p>Quality assessment of individual studies will be performed using the following checklists:</p> <ul style="list-style-type: none"> <li>• ROBIS tool for systematic reviews</li> <li>• Cochrane RoB tool v.2 for RCTs and quasi-RCTs</li> <li>• Cochrane ROBINS-I tool for non-randomised (clinical) controlled trials and cohort studies</li> <li>• Effective Practice and Organisation of Care (EPOC) RoB Tool for before and after studies</li> <li>• Effective Practice and Organisation of Care (EPOC) RoB Tool for interrupted time series</li> </ul>

ID	Field	Content	
		The quality assessment will be performed by one reviewer and this will be quality assessed by a senior reviewer.	
16.	Strategy for data synthesis	<p>Intervention review:</p> <p>Depending on the availability of the evidence, the findings will be summarised narratively or quantitatively. Where possible, meta-analyses will be conducted using Cochrane Review Manager software. A fixed effect meta-analysis will be conducted and data will be presented as risk ratios or odds ratios for dichotomous outcomes, and mean differences or standardised mean differences for continuous outcomes. Heterogeneity in the effect estimates of the individual studies will be assessed using the I<sup>2</sup> statistic. I<sup>2</sup> values of greater than 50% and 80% will be considered as significant and very significant heterogeneity, respectively. Heterogeneity will be explored as appropriate using sensitivity analyses. If heterogeneity cannot be explained through sensitivity analysis then a random effects model will be used for meta-analysis, or the data will not be pooled if the I<sup>2</sup> statistic is greater than 80%.</p> <p>The confidence in the findings across all available evidence will be evaluated for each outcome using an adaptation of the 'Grading of Recommendations Assessment, Development and Evaluation (GRADE) toolbox' developed by the international GRADE working group: <a href="http://www.gradeworkinggroup.org/">http://www.gradeworkinggroup.org/</a></p> <p>Minimally important differences:</p> <ul style="list-style-type: none"> <li>• We will check the rehabilitation measures database (<a href="http://www.sralab.org">www.sralab.org</a>) for published MID's for scales reported by included studies and use these if available. If not, we will use GRADE default MID's.</li> <li>• For all remaining continuous outcomes, we will use GRADE default MID of 0.5 times SD of the control groups at baseline (or at follow-up if the SD is not available a baseline). For all remaining dichotomous outcomes (RRs, ORs and HRs), we will use the GRADE default for RR's of 0.8 and 1.25 for consistency.</li> </ul>

		5e Organisational affiliation of the review National Institute for Health and Care Excellence (NICE) and National Guideline Alliance		
25.	Review team members	National Guideline Alliance		
26.	Funding sources/sponsor	This systematic review is being completed by the National Guideline Alliance which receives funding from NICE.		
27.	Conflicts of interest	All guideline committee members and anyone who has direct input into NICE guidelines (including the evidence review team and expert witnesses) must declare any potential conflicts of interest in line with NICE's code of practice for declaring and dealing with conflicts of interest. Any relevant interests, or changes to interests, will also be declared publicly at the start of each guideline committee meeting. Before each meeting, any potential conflicts of interest will be considered by		

ID	Field	Content	
		the guideline committee Chair and a senior member of the development team. Any decisions to exclude a person from all or part of a meeting will be documented. Any changes to a member's declaration of interests will be recorded in the minutes of the meeting. Declarations of interests will be published with the final guideline.	
28.	Collaborators	Development of this systematic review will be overseen by an advisory committee who will use the review to inform the development of evidence-based recommendations in line with section 3 of <a href="#">Developing NICE guidelines: the manual</a> . Members of the guideline committee are available on the NICE website: <a href="https://www.nice.org.uk/guidance/indevelopment/gid-ng10113">https://www.nice.org.uk/guidance/indevelopment/gid-ng10113</a>

Bias arising from the randomisation process (Low/High/Some concerns)</b> High risk: The allocation sequence was not adequately concealed (alternation used). There were no significant differences between intervention and comparison groups on the variables of gender, race/ethnicity, free/reduced lunch status, age, or adaptive behaviour composite scores.</p> <p><b>2. Bias arising due to deviations from intended interventions (Low/High/Some concerns)</b> Some concerns: There is no information on blinding but it is likely that the participants and/or people delivering the intervention were aware of intervention groups during the trial. It was not specified which services, supports, experiences, or connections that participants should receive and schools were not required to follow through on summer plans in a specified way. Therefore, the extent to which each of the intervention components was used varied among the participants. An appropriate analysis was used.</p> <p><b>3. Bias due to missing outcome data (Low/High/Some concerns)</b> Some concerns: Outcome data was available for nearly all participants. There is no evidence that the result was not biased by missing outcome data. Missingness</p>

Study details	Results and risk of bias assessment using ROB 2/ ROBINS-I/ EPOC Risk of bias for interrupted time series studies
<p>Three strategies had individualized, active components specifically for youth in the intervention group (summer-focused planning, community connectors, and employer liaisons). Two strategies (community conversations and resource mapping) were broader, indirect components with potential to benefit all youth with disabilities attending a given high school, regardless of group assignment or participation in our project.</p> <p>Summer-focused planning; Planning with the students facilitated by community connectors, focused explicitly on the upcoming summer months, and was designed to assist youth in the intervention group to connect to specific summer work and other community experiences that might further their transition education</p> <p>Community connectors; Identification of a person at each school to serve in the role of “community connector” for youth with severe disabilities. Their role was to (a) attend their local community conversation and suggest others to invite; (b) facilitate the planning process for youth; (c) collaborate with the employer liaison, as needed; (d) serve as a link between parents, school staff, employer liaison, and others to facilitate progress toward meeting youths’ summer plans; and (e) follow up with the youth, parents, or others during the summer to help problem solve any challenges.</p> <p>Employer liaison; Identification of a person to serve as an employer liaison in each of the six communities. Their role was to (a) attend their local community conversation; (b) draw upon their existing networks and relationships to help community connectors make linkages between youths’ interests and employment, internship, or volunteer opportunities in the local community; (c) collaborate with the community connector, as needed; and (d) attend the planning process for youth with disabilities, when appropriate.</p> <p>Community conversations; Events in each community to foster dialogue around ways that schools, businesses, agencies, organizations, families, youth, and others could work together to expand the employment opportunities of youth with disabilities in their local community and to identify new partners willing to collaborate with participating schools.</p> <p>Resource mapping; Identifying and compiling the informal and formal resources that might be harnessed to improve outcomes for youth with</p>	<p>in the outcome could depend on its true value, however this is unlikely.</p> <p><b>4. Bias in measurement of the outcome (Low/High/Some concerns)</b> Some concerns: The method of measuring the outcome was not inappropriate and ascertainment did not differ between groups. The assessment of the outcome could have been influenced by knowledge of the intervention received (employment outcomes were reported from interviews with parents/guardians/family members and/or the youth themselves; social validity ratings were provided by community connectors and employer liaisons) however this is unlikely.</p> <p><b>5. Bias in selection of the reported result (Low/High/Some concerns)</b> Some concerns: There is no information on whether the result being assessed is likely to have been selected, on the basis of the results, from multiple eligible outcome measurements (e.g. scales, definitions, time points) within the outcome domain and from multiple eligible analyses of the data.</p> <p><b>Overall risk of bias (Low/High/Some concerns)</b> High risk: The study is judged to be of high risk of bias in one domain</p> <p><b>Source of funding</b> The research was supported by the Institute of Education Sciences</p> <p><b>Other information</b> The extent to which each of the five intervention components was used with each participant varied by community and by each student’s need.</p>

Bias arising from the randomisation process (Low/High/Some concerns)</b> High risk: The allocation sequence was not adequately concealed. There were no significant differences between the two groups on gender, race, disability, and IQ variables. However, approximately 20% more of the experimental group was</p>

Study details	Results and risk of bias assessment using ROB 2/ ROBINS-I/ EPOC Risk of bias for interrupted time series studies
<p><b>Patient characteristics</b></p> <p>Gender: n (%) Male; intervention=40 (64.5), control=23 (63.9) Female; intervention=22 (35.5), control=13 (36.1)</p> <p>Race: n (%) White; intervention=53 (85.5), control=27 (75.0) Non-white; intervention=9 (14.5), control=9 (25.0)</p> <p>Disability: n (%) Learning disability; intervention=17 (27.4), control=27 (75.0) Intellectual disabilities; intervention=40 (64.5), control=9 (25.0) Other; intervention=5 (8.0), control=0 (0)</p> <p>Full Scale IQ: Mean (SD); intervention=75.70 (12.1), control=80.5 (10.58) [Note that IQ scores were not available for 16 experimental participants, and 6 control participants]</p> <p><b>Interventions</b></p> <p>Extension of transition services beyond graduation versus Transition Services ceasing at graduation</p> <p>Extension of transition services: A coordinated set of extended transition services to assist the student with entering and maintaining employment. Services were based on the young adult's needs and included vocational assessment, agency contacts, Individualized Educational Program meetings, extended vocational training, employability counselling, job club, job interview assistance, job development, and job coaching. The intervention was delivered by a job training coordinator.</p> <p>Vocational assessment; Community-based assessment process which included job try-outs to determine if the participant's skills met specific job requirements.</p>	<p>made up of youth with intellectual disabilities and the control group had approximately 10% more of students who were learning disabled.</p> <p><b>2. Bias arising due to deviations from intended interventions (Low/High/Some concerns)</b></p> <p>High risk: There is no information on blinding but it is likely that the participants and/or people delivering the intervention were aware of intervention groups during the trial. Participants received specific transition services on an as-needed basis, therefore it was likely there were variations in the intervention received across participants (the study reports that when examining the total hours of transition services delivered, huge standard deviations resulted). An appropriate analysis was not used to estimate the effect of adhering to intervention.</p> <p><b>3. Bias due to missing outcome data (Low/High/Some concerns)</b></p> <p>High risk: Outcome data was not available for all, or nearly all randomised participants. Possible that the results were biased by missing outcome data; the research team randomly assigned other participants to experimental and control groups to maintain enough power to conduct analyses.</p> <p><b>4. Bias in measurement of the outcome (Low/High/Some concerns)</b></p> <p>Some concerns: The method of measuring outcomes was not inappropriate and did not differ by group. No information on the blinding of outcome; assessment could have been influenced by knowledge of the intervention however this is unlikely.</p> <p><b>5. Bias in selection of the reported result (Low/High/Some concerns)</b></p> <p>Some concerns: There is no information on whether the data has been analysed according to a pre-specified plan (no protocol available). The results may have been selected on the basis of multiple eligible outcome measurements within the outcome domain, however this is unlikely</p> <p><b>Overall risk of bias (Low/High/Some concerns)</b></p> <p>High risk: The study is judged to be of high risk of bias in three domains</p>

Study details	Results and risk of bias assessment using ROB 2/ ROBINS-I/ EPOC Risk of bias for interrupted time series studies
<p>Agency contacts; Interagency coordination services from rehabilitation agencies or local boards of intellectual disabilities/developmental disabilities</p> <p>Individualized Educational Program (IEP) meetings; Since the youth were graduates, it was decided that an IEP was not required however if the coordinator felt that an IEP meeting was needed to coordinate numerous services, they would facilitate an IEP meeting including the participant, the parents, school personnel, and other service providers. A behavioural contract was incorporated into the IEP meeting for participants who had behavioural issues. The responsibilities and expectations of the youth would be clearly outlined.</p> <p>Extended vocational training; Spending time in a vocational program after the two-year high school program was completed. Experimental participants returned to their original vocational program for the purpose of remediating specific skills or enrolling in a different vocational program.</p> <p>Employability counselling; One-to-one meetings with the job training coordinator including instruction and counselling that focused on the skills critical to gaining employment including social skill instruction, job maintenance, and work-related interpersonal skills. The sessions would focus on specific issues related to improving the youth's employability such as hygiene, grooming, and social skills.</p> <p>Job club; Weekly sessions on an as-needed basis in small group settings consisting of 3 to 5 students. The job training coordinator assisted students in real-life job search activities such as identifying potential job openings, completing applications, and scheduling interviews.</p> <p><b>Job</b> interview assistance; Each job training coordinator prepared students to meet with an employer to determine if there was a job match between the student's skills and interests and the employer's job demands. This assistance was delivered one-to-one prior to an actual interview. The coordinator would review how to dress for the interview, arrange transportation to the interview, if necessary, and rehearse specific answers to potential interview questions.</p> <p>Job development; Activities that led to job placement for students. Job training coordinators helped participants identify employers located</p>	<p><b>Source of funding</b> Not reported</p> <p><b>Other information</b> The disabilities of the participants were reported as learning disabilities, mental retardation, and other. The study reports that a full spectrum of disabilities participated in the secondary vocational education program. Since the terminology 'mental retardation' is not commonly used in the UK, the term 'intellectual disabilities' was utilised to describe the population.</p>

Study details	Results and risk of bias assessment using ROB 2/ ROBINS-I/ EPOC Risk of bias for interrupted time series studies
<p>within close proximity of their residence.</p> <p>Job coaching; On-the-job training to participants who needed additional instruction to learn specific job tasks or social skills at the job. Job coaches provided non-verbal and verbal prompts to assure that the job was completed to the employer's satisfaction. The job coach would fade their support and transfer needed supports to co-workers to assure that the participant completed the job at an acceptable level.</p> <p>Ceasing of Transition Services: Transition services provided as part of a secondary vocational program before graduation, which subsequently ceased following graduation. Instead participants received a small stipend to share their employment and independent living status</p> <p><b>Follow-up</b> 5 years after study completion</p>

<sup>1</sup>Evidence downgraded by 2 due to serious risk of bias in 4 domains (confounding, selection of participants into the study, measurement of outcomes, and selection of the reported result) as per ROBINS-I

**Table 8: Evidence profile for comparison 4: Jobs by 21 Partnership Project versus no Partnership Project county clients**

Quality assessment							Number of participants		Effect		Quality	Importance
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Jobs by 21 Partnership Project	No Partnership Project county clients	Relative (95% CI)	Absolute		
<b>Progress into employment as measured by number employed in the fiscal year 2008 (follow-up 3 months; better indicated by higher values)</b>												
1 (Winsor 2011)	observational study	very serious <sup>1</sup>	no serious inconsistency	no serious indirectness	no serious imprecision	none	72/160 (45.0%)	14/212 (6.6%)	RR 6.81 (3.99 to 11.63)	384 more per 1,000 (from 197 more to 702 more)	LOW	CRITICAL
<b>Progress into employment as measured by number employed in the fiscal year 2009 (follow-up 3 months; better indicated by higher values)</b>												
1 (Winsor 2011)	observational study	very serious <sup>1</sup>	no serious inconsistency	no serious indirectness	serious imprecision <sup>2</sup>	none	26/230 (11.3%)	11/194 (5.7%)	RR 1.99 (1.01 to 3.93)	56 more per 1,000 (from 1 more to 166 more)	LOW	CRITICAL

CI: confidence interval; RR: risk ratio

<sup>1</sup>Evidence downgraded by 2 due to serious risk of bias in 4 domains (confounding, selection of participants into the study, measurement of outcomes, and selection of the reported result) as per ROBINS-I

<sup>2</sup>Evidence downgraded by 1 due to 95% CI crossed 1 MID (Default MID for dichotomous outcomes = 1.25)

**Table 9: Evidence profile for comparison 5: Before and after the Career Transition Liaison Project**

Quality assessment							Number of participants		Effect		Quality	Importance
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Before the Career Transition Liaison Project	After the Career Transition Liaison Project	Relative (95% CI)	Absolute		
<b>Competence as measured by work performance appraisals (follow-up 3 months; range of scores: 1-5; better indicated by higher values)</b>												
1 (Yamatani 2015)	observational study	very serious <sup>1</sup>	no serious inconsistency	serious indirectness <sup>2</sup>	serious imprecision <sup>3</sup>	none	12	12	-	MD 0.3 higher (0.03 higher to 0.57 higher)	VERY LOW	CRITICAL

CI: confidence interval; EPOC: Effective Practice and Organisation of Care; MD: mean difference; MID: minimal important difference; SD: standard deviation

<sup>1</sup>Evidence downgraded by 2 due to high risk of bias in 3 domains (intervention independent of other changes, knowledge of the allocated interventions adequately prevented during the study, and other risks of bias) as per EPOC risk of bias for interrupted time series studies

<sup>2</sup>Evidence downgraded by 1 due to 1 indirect aspect of PICO (population)

<sup>3</sup>Evidence downgraded by 1 due to 95% CI crossed 1 MID (0.5x SD of the control group = 0.184)

**Table 10: Evidence profile for comparison 6: Extension of transition services beyond graduation versus transition services ceasing at graduation**

Quality assessment							Number of participants		Effect		Quality	Importance
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Extension of transition services beyond graduation	Transition services ceasing at graduation	Relative (95% CI)	Absolute		
<b>Independence as measured by registered to vote (follow-up 5 years; better indicated by higher values)</b>												
1 (Izzo 2000)	quasi-randomised trial	very serious <sup>1</sup>	no serious inconsistency	no serious indirectness	very serious imprecision <sup>2</sup>	none	18/30 (60.0%)	9/16 (56.3%)	RR 1.07 (0.63 to 1.80)	39 more per 1,000 (from 208 fewer to 450 more)	VERY LOW	CRITICAL
<b>Independence as measured by married (follow-up 5 years; better indicated by higher values)</b>												

1 (Izzo 2000)	quasi-randomised trial	very serious <sup>1</sup>	no serious inconsistency	no serious indirectness	very serious imprecision <sup>2</sup>	none	6/30 (20.0%)	3/17 (17.6%)	RR 1.13 (0.32 to 3.96)	23 more per 1,000 (from 120 fewer to 522 more)	VERY LOW	CRITICAL
<b>Independence as measured by active in social groups (follow-up 5 years; better indicated by higher values)</b>												
1 (Izzo 2000)	quasi-randomised trial	very serious <sup>1</sup>	no serious inconsistency	no serious indirectness	serious imprecision <sup>3</sup>	none	17/30 (56.7%)	3/17 (17.6%)	RR 3.21 (1.10 to 9.39)	390 more per 1,000 (from 18 more to 1,000 more)	VERY LOW	CRITICAL
<b>Independence as measured by has savings account (follow-up 5 years; better indicated by higher values)</b>												
1 (Izzo 2000)	quasi-randomised trial	very serious <sup>1</sup>	no serious inconsistency	no serious indirectness	no serious imprecision	none	20/29 (69.0%)	3/16 (18.8%)	RR 3.68 (1.29 to 10.50)	503 more per 1,000 (from 54 more to 1,000 more)	LOW	CRITICAL
<b>Independence as measured by has checkings account (follow-up 5 years; better indicated by higher values)</b>												
1 (Izzo 2000)	quasi-randomised trial	very serious <sup>1</sup>	no serious inconsistency	no serious indirectness	very serious imprecision <sup>2</sup>	none	15/29 (51.7%)	5/16 (31.3%)	RR 1.66 (0.74 to 3.71)	206 more per 1,000 (from 81 fewer to 847 more)	VERY LOW	CRITICAL
<b>Independence as measured by has credit cards (follow-up 5 years; better indicated by higher values)</b>												
1 (Izzo 2000)	quasi-randomised trial	very serious <sup>1</sup>	no serious inconsistency	no serious indirectness	very serious imprecision <sup>2</sup>	none	7/29 (24.1%)	1/16 (6.3%)	RR 3.86 (0.52 to 28.66)	179 more per 1,000 (from 30 fewer to 1,000 more)	VERY LOW	CRITICAL
<b>Independence as measured by has driver's license (follow-up 5 years; better indicated by higher values)</b>												
1 (Izzo 2000)	quasi-randomised trial	very serious <sup>1</sup>	no serious inconsistency	no serious indirectness	serious imprecision <sup>4</sup>	none	18/29 (62.1%)	14/16 (87.5%)	RR 0.71 (0.51 to 1.00)	254 fewer per 1,000 (from 429 fewer to 0 fewer)	VERY LOW	CRITICAL

CI: confidence interval; MID: minimal important difference; ROB 2: Cochrane risk of bias tool version 2; RR: risk ratio

<sup>1</sup>Evidence downgraded by 2 due to high risk of bias in three domains (randomisation process, deviations from intended interventions, and missing outcome data) as per RoB 2

<sup>2</sup>Evidence downgraded by 2 due to 95% CI crossed 2 MIDs (Default MIDs for dichotomous outcomes = 0.80 and 1.25)

<sup>3</sup>Evidence downgraded by 1 due to 95% CI crossed 1 MID (Default MID for dichotomous outcomes = 1.25)

<sup>4</sup>Evidence downgraded by 1 due to 95% CI crossed 1 MID (Default MID for dichotomous outcomes = 0.80)

## **Appendix G – Economic evidence study selection**

**Economic evidence study selection for review question: What are the most effective models of health, social care and education services working together to prepare disabled children and young people with severe complex needs for employment?**

One global search was undertaken – please see Supplement B for details on study selection.

## **Appendix H – Economic evidence tables**

**Economic evidence tables for review question: What are the most effective models of health, social care and education services working together to prepare disabled children and young people with severe complex needs for employment?**

No evidence was identified which was applicable to this review question.

## **Appendix I – Economic model**

**Economic model for review question: What are the most effective models of health, social care and education services working together to prepare disabled children and young people with severe complex needs for employment?**

No economic analysis was conducted for this review question.

## Appendix J – Excluded studies

### Excluded studies for review question: What are the most effective models of health, social care and education services working together to prepare disabled children and young people with severe complex needs for employment?

#### Effectiveness evidence

**Table 5: Excluded studies and reasons for their exclusion**

Study	Reason for Exclusion
Allott, Susan, Hicks, Tom, Raising aspiration: widening participation in supported internships, 12, 2016	Publication type: Report including case studies. No relevant data for extraction.
Anand, P., Honeycutt, T. C., Long-Term Outcomes for Transition-Age Youth With Mental Health Conditions Who Receive Postsecondary Education Support, Journal of Disability Policy Studies, 30, 223-232, 2020	Population: Do not appear to have severe complex needs requiring health, social care and education support. Youth with mental health conditions.
Andersen, A., Larsson, K., Pingel, R., Kristiansson, P., Anderzen, I., The relationship between self-efficacy and transition to work or studies in young adults with disabilities, Scandinavian Journal of Public Health, 46, 272-278, 2018	Outcomes/Population: Insufficient presentation of results - employment status is reported according to self-efficacy status. Likely the population did not require health, social care and education support (young adults with disabilities excluding those with serious physical illness or injury based on the Swedish National Board of Health and Welfare criteria).
Anderson, Caroline J., Vogel, Lawrence C., Employment outcomes of adults who sustained spinal cord injuries as children or adolescents, Archives of Physical Medicine and Rehabilitation, 83, 791-801, 2002	Population: Mean age at interview was 29 years (Age range 24 to 37 years)
Antonelli, K., O'Mally, J., Steverson, A., Participant experiences in an employment mentoring program for college students with visual impairments, Journal of Visual Impairment and Blindness, 112, 274-286, 2018	Population: Undergraduates with legal blindness ranging in age from 20 to 35 years (Mean=25.88)
Bal, M. I., Roelofs, P. P. D. M., Hiberink, S. R., van Meeteren, J., Stam, H. J., Roebroek, M. E., Miedema, H. S., Entering the labor market: increased employment rates of young adults with chronic physical conditions after a vocational rehabilitation program, Disability and Rehabilitation, 1-8, 2019	Population: Participants had chronic physical conditions with no additional comorbidities. 20% of participants had severe physical limitations.
Beyer, Stephen, et, al, What works?: transition to employment for young people with learning disabilities, 34p., 2008	Outcomes: Insufficient presentation of results for analysis
Beyer, Stephen, Meek, Andrea, Davies, Amy, Supported work experience and its impact on young people with intellectual disabilities, their families and employers, Advances in Mental Health and Intellectual Disabilities, 10, 207-220, 2016	Comparison: Non relevant comparison. (First versus second work placements)
Beyer, Steve, Transition from school to	Article unavailable
