

Appendix A: How this guideline was developed

When this guideline was started, we used the methods and processes described in the [Social Care Guidance Manual](#) (2013). From January 2015 we used the methods and processes in [Developing NICE Guidelines: The Manual](#) (2014). This appendix details the search strategies, review questions and review protocols for the guideline.

Search strategies

The evidence reviews used to develop the guideline recommendations were underpinned by systematic literature searches. The aim of the systematic searches was to comprehensively identify the published evidence to answer the review questions developed by the Guideline Committee and the NICE Collaborating Centre for Social Care.

A comprehensive systematic search strategy designed to identify empirical evidence to match all of the review questions (based on the scope) was developed in the Medline database before being translated for use in the remaining databases. The search strategies are listed at the end of this appendix.

The search strategies combined a combination of controlled indexing headings and free text terms including abbreviations. Methodological filters were not applied and the searches were restricted to human studies and English language only; publications in languages other than English were not appraised.

The strategy was to undertake a broad search to identify all the evidence relating to the population of interest (older people with complex needs and multiple long-term conditions – LTCs), rather than individual searches for every question. Although the population-based search strategy generated a very large set of records, the information specialists considered this was the best method of developing a comprehensive and sensitive strategy for this particular subject area.

Searches were based upon retrieving items for the population groups: 'older people', 'carers', 'long-term conditions', 'workforce/social care organisations' and the settings of 'residential care', 'nursing/care homes', 'intermediate care' or 'community care'. Searches were developed using subject heading and free text terms, aiming to balance sensitivity and precision, and the strategy was run across a number of health, social care, social sciences and economic databases. It was decided, with the Guideline Committee, to restrict the searches to studies published from 2004 onwards. This was on the basis that we needed to agree a cut-off point to ensure the number of outputs were manageable, while also being confident that important and relevant studies would be identified and ensuring that the retrieved evidence would be relevant to current practice. The database searches were not restricted to specific geographical areas; however, in selecting the websites to search, research on people's views was focused on the UK. The sources searched are listed below. The [Developing NICE Guidelines: The Manual](#) states that searches can be rerun and re-executed if it is agreed that the topic area moves quickly and that there is likely to be new evidence that could affect practice and the recommendations. However, given that the original search was broad in nature and focused on the population of interest, rather than interventions it was agreed with the Guideline Committee that the most focused and efficient approach was to conduct forwards citation checking, which is also standard practice in undertaking systematic reviews, as per the Cochrane Handbook. This work was conducted as part of the check for new evidence in October and November 2014. Forwards citation searching sought to identify evidence that cited the included references and backwards citation searching involved scanning the reference lists of included studies for relevant articles that met the inclusion criteria in order to maximise the relevance of the results. Websites and organisations were manually searched in order to identify empirical evidence that is not indexed on databases given that there can be a time lag in key wording references on databases meaning they may be identified by web searches earlier. Hand searching of selected journals was not carried out. References submitted by Guideline Committee members and stakeholders were also considered.

Economic evidence was searched for as part of the wider search strategy. In addition, the following economic databases were searched: the NHS Economic Evaluation Database (NHS EED) and the Health Economic Evaluations Database (HEED).

The bibliographic database searches were undertaken between January and February 2014. Website searches were undertaken during April 2014 was undertaken in January 2015.

Older people with social care needs and multiple long term conditions: Appendix A

S69	s67 NOT S68
S70	S33 AND S46 AND S69

1. Review questions and review protocols

Q number	Questions (n=13)	Objectives of review	Criteria for considering studies for review	Supplementary & supporting evidence (including from GDG)
1.	Views and experiences			
1.1.1	<p>Service users and carers What are the views and experiences of older people with multiple long-term conditions and their carers, of the social care services they receive? (Relevant to all of Scope section 4.3.1)</p>	<ul style="list-style-type: none"> ➤ To describe the self-reported views and experiences of people with multiple long-term conditions and their family carers of the social care services they receive 	<p>Population: Older people, aged 65 years and older, with multiple long-term conditions who use social care services, and their families, partners and carers. Self-funders and people who organise their own care are included</p>	<p>Grey literature which includes views of people who use services and their carers (possibly as part of evaluation) may be identified</p> <p>Findings from surveys undertaken by organisations representing service users, patients and carers which are not published in research journals may also be considered</p>
1.1.2	<p>Do service users and carers consider that their care is (a) personalised; (b) integrated or coordinated with healthcare? (Relevant to all of Scope section 4.3.1)</p>	<ul style="list-style-type: none"> ➤ To consider whether people who receive care think that their care is personalised and integrated or coordinated with primary and community health services 	<p>Intervention: Personalised and integrated social care</p> <p>Setting: Service users' home, including sheltered housing accommodation; care (residential and nursing) homes (not hospital settings)</p>	
1.1.3	<p>What do they think works well and what needs to change? (Relevant to all of Scope section 4.3.1)</p>	<ul style="list-style-type: none"> ➤ To highlight aspects of care which work well, and which should be improved, as perceived by service users and their families 	<p>Outcomes: Likely to relate to outcomes such as: user satisfaction; quality and continuity of care; choice and control; involvement in decision-making; dignity and independence; quality of life and wellbeing; health status;</p>	

Q number	Questions (n=13)	Objectives of review	Criteria for considering studies for review	Supplementary & supporting evidence (including from GDG)
		<ul style="list-style-type: none"> ➤ To contextualise and compare findings from effectiveness questions on personalised and integrated social care models, and consider the extent to which evidence of different kinds is mutually supportive to recommendations 	<p>safety and safeguarding (4.4 Scope).</p> <p>The study designs relevant to these questions are likely to include:</p> <ul style="list-style-type: none"> ➤ Systematic reviews of qualitative studies on this topic ➤ Qualitative studies of service user and carer views of social and integrated care ➤ Qualitative components of effectiveness and mixed methods studies 	
1.2.1	<p>Practitioners, managers and commissioners What are the views and experiences of practitioners, managers and commissioners in health and social care who procure, manage or deliver care to older people with multiple long-term conditions in community and care home settings? (Relevant to all of Scope section 4.3.1)</p>	<ul style="list-style-type: none"> ➤ To describe the views and experiences of people delivering, organising and commissioning social and integrated care services ➤ To collect evidence on key practice and workforce issues which we may consider within the guidance 	<p>Population: Social care practitioners (providers, workers, managers, social workers), and social care commissioners involved in delivering social care to people with long-term conditions in the community or care homes; personal assistants engaged by people with long-term conditions and their families. General practice and other community-based healthcare practitioners: GPs, GPs and community/district nurses – nurses in residential care settings, community matrons (who have a role in supporting care homes to access services)</p>	<p>Grey literature which includes views of people who provide social care services</p> <p>Publications of bodies representing workforce, e.g. RCNs, GPs</p>
1.2.2	<p>What do they think works well, and what needs to change? (Relevant to all of</p>	<ul style="list-style-type: none"> ➤ To highlight aspects of care which work well, and are personalised and integrated, as 		

Q number	Questions (n=13)	Objectives of review	Criteria for considering studies for review	Supplementary & supporting evidence (including from GDG)
	Scope section 4.3.1)	<p>perceived by practitioners, managers and commissioners</p> <ul style="list-style-type: none"> ➤ To highlight aspects of care which providers and commissioners feel should change in order to improve the services ➤ To contextualise and compare findings from effectiveness questions on social and integrated care and consider the extent to which evidence of different kinds is mutually supportive to recommendations 	<p>Intervention: Personalised and integrated social care</p> <p>Setting: Service user's home, including sheltered housing accommodation; care (residential and nursing) homes (not hospital settings)</p> <p>Outcomes: User and carer related outcomes (see 1.1.1–1.1.3)</p> <p>In addition, process and intermediate outcomes (e.g. change in unplanned admissions, quality and continuity outcomes) (4.4 Scope).</p> <p>The study designs relevant to these questions are likely to include those listed under 1.1 above but with the views and experiences of practitioners</p>	

Q number	Questions (n=13)	Objectives of review	Criteria for considering studies for review	Supplementary & supporting evidence (including from GDG)
2.1.1	<p>Assessment and planning of care of older people with multiple LTCs What are the effects (benefits and harms) of different types of assessment and planning of personalised care on outcomes for older people with multiple long-term conditions and their carers? (Relevant to Scope section 4.3.1a, b & f)</p>	<ul style="list-style-type: none"> ➤ To identify models of care assessment and care planning and associated outcomes ➤ To identify and evaluate the effects of different models and processes for holistic assessment of (mental, physical and social) care needs and care planning ➤ To identify and evaluate the support services, including information and advocacy, of people with long-term conditions who use services and their carers, which will promote participation in care planning and review 	<p>Population: Older people, aged 65 years and older, with multiple long-term conditions who use social care services, and their families, partners and carers. Self-funders and people who organise their own care are included</p> <p>Intervention: Personalised and integrated assessment and care planning, including carer assessment where this is carried out simultaneously. Established and emerging models (which may show promise but are not well evidenced) may be considered</p> <p>Setting: Service user's home, including sheltered housing accommodation; care (residential and nursing) homes (not hospital settings)</p> <p>Outcomes: Likely to include service user focused outcomes such as: user satisfaction; quality and continuity of care; empowerment, choice and control; involvement in decision-making; dignity and independence; quality of life; health status; safety and safeguarding, preventative effects, impact on unplanned hospital admissions and delayed discharges, mortality. (4.4</p>	<p>There may be some practice sites demonstrating innovative practice in this field. It is important to note that 'innovation' may be defined in terms of the practice/service being delivered, and/or the way in which it is delivered. It could be that this question elicits evidence about 'what works' in respect of implementing models of care, as well as the models themselves</p> <p>There may be comparative studies of outcomes versus task focussed assessment and planning</p> <p>There may also be examples of where services/organisations are working in a way which is holistic and puts the person using the service at the centre that we would want to highlight</p> <p>As with all our evidence, we may need to take a decision about methodological quality thresholds</p>

			<p>Scope). Sub-group analysis (see EIA) may be of interest</p> <p>Additional organisational outcomes which may influence outcomes for service users such as: productivity, consistency in care provision, job satisfaction</p> <p>The study designs relevant to these questions are likely to include:</p> <ul style="list-style-type: none"> ➤ Systematic reviews of studies of different models of assessment and care planning ➤ Randomised controlled trials of different approaches to assessment and care planning (e.g. outcomes-focused vs task-focused) ➤ Qualitative evaluations of different approaches ➤ Other comparative/controlled evaluations ➤ Mixed methods studies 	<p>Studies reporting retrospectively on the content of care plans and other records would be useful</p>
2.1.2	<p>Service delivery What are the existing frameworks, models and components of care packages for managing multiple long-term conditions and what</p>	<ul style="list-style-type: none"> ➤ To identify frameworks and models of care delivery and associated outcomes ➤ To identify the components of effective 	<p>Population: Older people, aged 65 years and older, with multiple long-term conditions who use social care services, and their families, partners and carers. Self-funders and people who organise their own care are included</p>	<p>Comparing existing frameworks: see e.g. Improving Care for People with LTCs, USA http://www.improvingchroniccare.org/downloads/review_of_international_frameworks</p>

	<p>outcomes do they deliver? (Relevant to Scope section 4.3.1d)</p>	<p>care for people with long-term conditions, including those relating to structure and culture, with reference to the specific community and residential settings involved</p> <ul style="list-style-type: none"> ➤ To consider the outcomes of care organised and delivered outside the statutory sector 	<p>Intervention: Different frameworks, models and approaches for managing and delivering personalised and integrated care for older people with multiple long-term conditions</p> <p>Setting: Service user's home, including sheltered housing accommodation; care (residential and nursing) homes (not hospital settings)</p> <p>Outcomes: Effective and safe management of multiple long-term conditions. Measures of choice, control and independence. Service user and carer satisfaction and quality of life. Reduced emergency hospital admissions; reduction in inappropriate admissions to residential care. Mortality. Cost effectiveness. CQC inspection criteria may be relevant</p> <p>The study designs relevant to these questions are likely to include:</p> <ul style="list-style-type: none"> ➤ Systematic reviews of studies which evaluate different models, frameworks and components of care ➤ Randomised controlled trials of different approaches ➤ Qualitative evaluations of different approaches ➤ Other comparative/controlled 	<p>chris_hamm.pdf.com</p> <ul style="list-style-type: none"> - chronic care model (includes self-management) - care management - continuity of care model - public health model - continuity of care model (mainly with health professionals) - Kaiser - Evercare <p>Delivering better services King's Fund, UK http://www.kingsfund.org.uk/sites/files/kt/field/field_publication_file/delivering-better-services-for-people-with-long-term-conditions.pdf</p> <ul style="list-style-type: none"> - House of Care <p>The GDG may know of models or components of models (e.g. integrated care coordinators) which impact on these outcomes</p>
--	---	---	--	--

			<p>evaluations</p> <ul style="list-style-type: none"> ➤ Mixed methods studies 	
2.1.3	<p>Barriers and facilitators What are the barriers and facilitators to the delivery of effective, personalised, integrated care for people with multiple long-term conditions in community settings? (Relevant to Scope section 4.3.1 a, b & d)</p>	<ul style="list-style-type: none"> ➤ Drawing on approaches, models and practice identified as potentially effective (see 2.1.1, 2.1.2), to identify opportunities for and barriers to their implementation ➤ To identify implementation and practice issues which contribute to undesirable or harmful effects and identify means of overcoming them ➤ To contextualise the views of users, carers and practitioners (1.1.1, 1.1.2, 1.2.1, 1.2.2) by identifying barriers and facilitators to improved or changed practice they suggest would improve outcomes 	<p>Population: Older people, aged 65 years and older, with multiple long-term conditions who use social care services, and their families, partners and carers. Self-funders and people who organise their own care are included</p> <p>Intervention: Current practice, usual treatment, compared to implementation of innovative interventions and approaches</p> <p>Setting: Service user's home, including sheltered housing accommodation; care (residential and nursing) homes (not hospital settings)</p> <p>Outcomes: Outcomes of process and organisation evaluation including development; content; culture; structure; setting; mode of delivery, acceptability; characteristics of the intervener (providers) and the recipient (users), and any unintended harmful effects. These are aspects of process evaluation</p> <p>The study designs relevant to these questions are likely to include:</p>	<p>Resource: Integrated Care and Support: Our Shared Commitment May 2013 National Collaboration for Integrated Care and Support (includes section on data-sharing)</p> <p>Resource: Removing the policy barriers to integrated care in England Chris Ham and Judith Smith The Nuffield Trust</p> <p>Enablers and barriers to integrated care and implications for Monitor A report prepared for Monitor May 2012 A consortium, led by Frontier Economics, and including The King's Fund, The Nuffield Trust and Ernst & Young was appointed by Monitor to consider issues relating to the delivery of integrated care. This report sets out the evidence, analysis and findings</p> <p>GDG may identify qualitative material and innovative practice</p>
2.1.4	<p>What are the barriers and facilitators to the delivery of effective, personalised, integrated care for people with multiple long-term conditions in care home settings? (Relevant to Scope section 4.3.1a, b & d)</p>			

			<ul style="list-style-type: none"> • Guidance and current practice • Process and implementation evaluations • Other comparative/controlled evaluations <p>In addition to specific studies on implementation, resources for this question will draw upon and triangulate with:</p> <ul style="list-style-type: none"> • Material identified for questions 1, on the views and experiences of users, carers, practitioners, etc. • Material identified for questions 2.1.1 and 2.1.2 	<p>on delivery and implementation (though, again, we would need to take a decision about methodological quality thresholds)</p>
2.1.5	<p>Self-management support How effective are different types of support for older people to enable them to self-manage (aspects of) their own conditions? (Relevant to Scope section 4.3.1c)</p>	<p>➤ To identify the effectiveness of the different ways in which self-management is facilitated within care packages</p>	<p>Population: Older people, aged 65 years and older, with multiple long-term conditions who use social care services, and their families, partners and carers. Self-funders and people who organise their own care are included</p> <p>Interventions: Assessment and care planning as it facilitates self-management; may also include direct and indirect factors that support self-management such as housing adaptations or telecare, personal</p>	<p>A potentially wide topic as it involves direct and indirect factors influencing self-management. GDG to provide a steer on narrowing down the types of support most relevant to this guidance</p> <p>Self-care reduces costs and Improves health – the evidence 2010 Expert Patients Programme</p> <p>PRISM study is an NIHR funded recent and comprehensive review of self-</p>

			<p>budgets and direct payments, peer support, and access to transport in so much as they relate to a package of care for long-term conditions</p> <p>Setting: Service users' home, including sheltered housing accommodation; care (residential and nursing) homes (not hospital settings).</p> <p>Outcomes: These should relate primarily to social care outcomes, such as choice, control and dignity, and to service use and costs (rather than clinical outcomes). Emergency hospital admissions and inappropriate entry into residential care may also be considered outcomes of poor support to self-manage</p> <p>The study designs relevant to these questions are likely to include:</p> <ul style="list-style-type: none"> ➤ Systematic reviews of qualitative and quantitative evaluations on this topic ➤ Qualitative studies of service user and carer views ➤ Standardised scales measuring satisfaction and wellbeing ➤ Randomised controlled trials and cluster randomised controlled trials of support to self-manage 	<p>management (Barts and London/Edinburgh Uni)</p> <p>GDG in favour of looking at telecare, but not as a substitute for human contact, and research material may be more oriented toward health</p> <p>GDG advises that support to access direct payments, personal health budgets, etc. are part of this topic: older people are often thought to be unable or unwilling to control own care/payment. Timing of initiation of self-management important: not appropriate at a crisis point. Could be referred to as part of care planning (2.1.1). Has a 'prevention' dimension: demand management has reduced services relevant to earlier identification of need, when a little support might delay escalation</p>
--	--	--	--	---

			➤ Other comparative/controlled evaluations	
2.1.6	<p>Social isolation How can older people with multiple long-term conditions living in the community or in care home settings be supported to participate in community, family and social activities? (Relevant to Scope section 4.3.1f)</p>	<ul style="list-style-type: none"> ➤ To review material identified to address 2.1.1, to consider how social participation is reflected in care assessment and planning and how people access information about participation-related activities ➤ To consider how social participation can be improved in each of the relevant care settings as part of a coordinated package of care 	<p>Population: Older people, aged 65 years and older, with multiple long-term conditions who use social care services, and their families, partners and carers. Self-funders and people who organise their own care are included</p> <p>Intervention: Interventions and approaches targeted at reducing isolation. Befriending schemes, group activities, volunteer schemes, strengths-based approaches.</p> <p>Setting: Service user's home, including sheltered housing accommodation; care (residential and nursing) homes (not hospital settings)</p> <p>Outcomes: Measures of wellbeing and quality of life. Participation in community, family and social activities. Measures of social support and effects on social isolation and loneliness</p> <p>The study designs relevant to these questions are likely to include:</p> <ul style="list-style-type: none"> ➤ Systematic reviews of 	<p>Social participation should be an aspect of care assessment and planning. We need to focus this question on older people with multiple long-term conditions. The question is conceptually linked to high incidence of depression among the population concerned, and the need to support improved wellbeing within this group of people. Definition of 'community' is not straightforward as people may live in in care homes or housing away from their previous long-term residence</p> <p>It may be useful to review any evidence on innovative practice in community involvement. Examples provided: York Housing Association; Billericay community model</p> <p>Social isolation does not necessarily mean loneliness (depends on individual)</p> <p>Windle K, Francis J, Coomber C (2011) Research briefing 39 Preventing loneliness and social</p>

			<p>qualitative and quantitative studies on interventions on this topic</p> <ul style="list-style-type: none"> ➤ Qualitative studies of service user views ➤ Standardised scales measuring satisfaction and wellbeing ➤ Randomised controlled trials and cluster randomised controlled trials ➤ Other comparative/controlled evaluations 	<p>isolation: interventions and outcomes. London: Social Care Institute for Excellence</p> <p>Examples/studies of care plans may be useful to this topic. GDG may know of relevant small-scale interventions which support social participation.</p>
--	--	--	---	--

Q number	Questions (n=13)	Objectives of review	Criteria for considering studies for review	Supplementary & supporting evidence (including from GDG)
3	Workforce and carers			
3.1	<p>Workforce competencies</p> <p>How can social care practitioners delivering services to people with multiple long-term conditions be assisted to recognise, refer on and/or manage common health</p>	<ul style="list-style-type: none"> ➤ To identify the effectiveness of approaches to existing induction, learning activities and continuing personal development delivered to social care staff and (unregulated) personal assistants 	<p>Population: Social care practitioners (providers, workers, managers, social workers) and social care commissioners involved in delivering social care to people with long-term conditions in the community or care homes; personal assistants engaged by people with long-term conditions</p>	<p>A key aspect of the question will concern how social care practitioners are enabled to work with and liaise confidently with healthcare and other professionals</p> <p>Note that medication management in community is a future NICE topic, so we may</p>

Q number	Questions (n=13)	Objectives of review	Criteria for considering studies for review	Supplementary & supporting evidence (including from GDG)
3	Workforce and carers			
	conditions and symptoms? (Relevant to Scope section 4.3.1d)	<p>working with older people with multiple long-term conditions</p> <ul style="list-style-type: none"> ➤ To identify barriers and facilitators to the implementation of approaches which enable social care staff to identify and manage common health conditions and symptoms ➤ To consider whether and how increased integration could foster shared learning and improved communication between care staff in relation to the identification and management of these common conditions 	<p>and their families. Nurses in residential care settings, primary and community healthcare staff, community matrons (who have a role in supporting care homes to access healthcare)</p> <p>Intervention: Organisational skills support and continuing personal development; models of integration and cross-agency work and training; personalised services which identify and respond to the physical and mental existing and evolving care needs of the individual. Staff support, supervision, training and assessment. Development of and use of protocols</p> <p>Setting: Service user's home, including sheltered housing accommodation; care (residential and nursing) homes (not hospital settings)</p> <p>Outcomes: Effectiveness studies of 'training' with follow-up; outcomes relating to safeguarding and safety, such as (e.g. falls</p>	<p>want to focus this question on understanding how this fits into other training or support for social care workers</p> <p>GDG have/will advise on current induction and training of social care staff in both settings; CQC requirements and contract monitoring which invokes competencies</p> <p>Skills for Care are looking at training pathways for (unregulated) personal assistants</p> <p>Data from the NESCC (formerly James Linden Alliance), the Care Audit and the National Care Forum may be relevant here</p>

Q number	Questions (n=13)	Objectives of review	Criteria for considering studies for review	Supplementary & supporting evidence (including from GDG)
3	Workforce and carers		<p>prevention; prevention of back injury in carer); reduction in emergency hospital admissions: implementation of CQC regulations and contract monitoring; initiation of treatments, e.g. for depression. Measures of staff confidence.</p> <p>The study designs relevant to these questions are likely to include:</p> <ul style="list-style-type: none"> ➤ Systematic reviews of qualitative and quantitative studies on interventions designed to improve staff competencies ➤ Qualitative studies of service user and carer views of training and competencies of staff and themselves (drawing on 1.1.1) ➤ Standardised scales measuring changes in knowledge and practice ➤ Randomised controlled trials and cluster randomised controlled trials on training ➤ Other comparative studies 	

Q number	Questions (n=13)	Objectives of review	Criteria for considering studies for review	Supplementary & supporting evidence (including from GDG)
3	Workforce and carers			
3.2	<p>Carer support How should services work with and support carers of older people with multiple long-term conditions (who may have long-term conditions themselves)? (Relevant to Scope section 4.3.1e)</p>	<ul style="list-style-type: none"> ➤ Drawing on material identified in questions 1, and 2.1.1, to identify approaches in care planning and delivery which enable carers, partners and families to participate in care planning and delivery, both in community and care home contexts ➤ Drawing on material identified to address question 3.1, to identify and evaluate interventions and approaches (including information, education) which support carers in the tasks of caring ➤ To consider how providers of social care and health care should work in partnership and support carers of older people with multiple long-term conditions, including identification of remediable difficulties 	<p>Population: Carers of older people with multiple long-term conditions, aged 65 years and older. Carers and family members of self-funders and people who organise their own care are included</p> <p>Intervention: ‘Support to care’ (involvement in planning and delivery, specific support such as needs assessment and respite or other breaks, training in skills such as lifting; support to enable social participation and reduce isolation of carers)</p> <p>Settings: Service users’ homes, including sheltered housing accommodation; family carers’ role in supporting older people in care home settings</p> <p>Outcomes: User and carer satisfaction with services; perception of quality and continuity of care; perception of carer burden; choice and control for users and carers; involvement in decision-making; dignity and independence; quality of life; health status of user</p>	<p>As this is potentially a very large topic, the focus ought to be on the aspects of carer support and involvement specific to ensuring coordinated, coherent care for older people with multiple long-term conditions and social care needs (i.e. rather than on effectiveness of interventions to support carers more broadly).</p> <p>‘Triangle of Care’ for people with dementia from Carers Trust could be referenced here, plus provisions of Care Bill.</p>

Q number	Questions (n=13)	Objectives of review	Criteria for considering studies for review	Supplementary & supporting evidence (including from GDG)
3	Workforce and carers			
		(such as need for training and introduction of lifting equipment; need for support for social interaction and participation)	<p>and carer; safety and safeguarding within both settings. Unplanned hospital admissions and entry into residential care</p> <p>The study designs relevant to these questions are likely to include:</p> <ul style="list-style-type: none"> ➤ Systematic reviews of qualitative studies on this topic ➤ Systematic reviews utilising measures of carer burden and satisfaction; ➤ Randomised controlled trials and cluster randomised controlled trailsrandomised trials of interventions to support carers to care (e.g. education). ➤ Other comparative/controlled evaluations <p>In addition to specific studies on carer support, resources for this question will draw upon and triangulate with:</p>

			<ul style="list-style-type: none"> ➤ Material identified for questions 1, on the views and experiences of users, carers, practitioners, etc. 	

Search summary

Electronic databases in the research fields of social care, health and social science will be searched using a range of controlled indexing and free-text search terms based on the populations: 'older people', 'carers', 'long-term conditions', 'complex needs', 'workforce', 'social care organisation', and settings: 'residential care', 'service user own homes', 'nursing homes' and 'care homes'. The search will capture both journal articles and other publications of empirical research. Additional searches of websites of relevant organisations will also be carried out. It may be necessary to conduct some additional searches for economics literature, if needed.

A single broad search strategy will be used to identify material which addresses all the agreed review questions on older people with long-term conditions, and additional searching will be considered if it is felt that relevant material was not delivered for all questions. The search strategy does not distinguish research of specific study designs, as this will be differentiated at the screening stages of the review.

Systematic searches balancing sensitivity and precision will be undertaken. The following databases will be searched:

Social care

- Social Care Online – beta version (2013 only)
- Social Policy and Practice
- Social Work Abstracts
- Social Services Abstracts

Social science and politics

- ASSIA
- Sociological Abstracts
- Social policy and practice
- IBSS
- PILOTS

Health

- Medline
- PsycINFO
- EMBASE
- Cochrane Library (including DARE, HTA, CENTRAL trials, Systematic reviews)
- HMIC
- CINAHL
- BNI

Economic

- NHS EED

Searches were based upon:

Concept A 'Older people' OR 'Carers' AND
Concept B 'Long-term conditions' AND 1 OR more
Concept C Settings
Concept D Workforce
AND
year 2004+

Search outputs were screened against the exclusion criteria for the review question (see review protocols).

In terms of how the evidence was presented, we grouped reviewed questions. This was because the review found only a limited number of studies relevant for inclusion and included studies often provided evidence for more than 1 question. Studies are alphabetised and clearly cross-referenced in this guideline, with full explanations of the link between evidence and recommendations provided in section 3.7 of the full guideline Evidence to Recommendations.

Follow-up searching

Follow-up searching included reference checking of research studies included at evidence review stage, and citation checking using Google Scholar.
