## National Institute for Health and Care Excellence

Draft for consultation

# Osteoarthritis: assessment and management (update)

[13] Evidence reviews for the clinical and costeffectiveness of oral, topical and transdermal medicines for the management of osteoarthritis

NICE guideline

Evidence reviews underpinning recommendations 1.4.1 to 1.4.9 and research recommendations in the NICE guideline

April 2022

**Draft for Consultation** 

#### **Disclaimer**

The recommendations in this guideline represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, professionals are expected to take this guideline fully into account, alongside the individual needs, preferences and values of their patients or service users. The recommendations in this guideline are not mandatory and the guideline does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and/or their carer or guardian.

Local commissioners and/or providers have a responsibility to enable the guideline to be applied when individual health professionals and their patients or service users wish to use it. They should do so in the context of local and national priorities for funding and developing services, and in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities. Nothing in this guideline should be interpreted in a way that would be inconsistent with compliance with those duties.

NICE guidelines cover health and care in England. Decisions on how they apply in other UK countries are made by ministers in the <u>Welsh Government</u>, <u>Scottish Government</u>, and <u>Northern Ireland Executive</u>. All NICE guidance is subject to regular review and may be updated or withdrawn.

CI: Confidence interval; MD: Mean difference; SMD: Standardised mean difference; RR: Risk ratio

### Explanations

- a. Downgraded by 1 increment if the majority of the evidence was at high risk of bias, and downgraded by 2 increments if the majority of the evidence was at very high risk of bias
- b. Downgraded by 1 increment if the confidence interval crossed one MID or by 2 increments if the confidence interval crossed both MIDs
- c. Absolute effect calculated by risk difference due to zero events in at least one arm of one study
- d. Downgraded for heterogeneity due to conflicting number of events in different studies (zero events in one or more studies)

#### Serious adverse events 4: Central nervous system adverse events at ≤3 months (follow up: mean 7 weeks)

CI: Confidence interval; MD: Mean difference; SMD: Standardised mean difference; RR: Risk ratio

### **Explanations**

- a. Downgraded by 1 increment if the majority of the evidence was at high risk of bias, and downgraded by 2 increments if the majority of the evidence was at very high risk of bias
- b. Downgraded by 1 increment if the confidence interval crossed one MID or by 2 increments if the confidence interval crossed both MIDs
- c. Downgraded by 1 or 2 increments because heterogeneity, unexplained by subgroup analysis
- d. Downgraded for heterogeneity due to conflicting number of events in different studies (zero events in one or more studies)
- e. Absolute effect calculated by risk difference due to zero events in at least one arm of one study
- f. Downgraded by 1 or 2 increments because of outcome indirectness

Outcomes: 3.5%			
Data sources			

**Health outcomes:** Where available meta-analysed data from RCTs was used to estimate adverse event rates: any gastrointestinal event (dyspepsia, perforation, symptomatic ulcers, or bleeding) and myocardial infarction. Baseline event data estimated from non-aspirin users in a large RCT (CLASS). Utilities for health states were elicited from general population survey (n=60) in Sudbury, Ontario using the standard gamble and rating scale techniques.

Quality-of-life weights: Not specified. Cost sources: Boehringer Ingelheim submission, British National Formulary (year unclear).

#### Comments

**Source of funding:** NHS R&D HTA Programme (project number 03/34/01). **Limitations:** Study does not include all comparators being assessed in the review. 2008 units costs may not reflect the current NHS context. Unclear how utilities were derived to calculate QALYs. Mixed arthritis population in RCTs used to determine treatment effect, although most people have osteoarthritis. Further RCTs have been published for some of the comparators and therefore treatment effects may not reflect the full body of evidence. Unclear sources for resource use associated with adverse events. **Other:** None.

Overall applicability: (d) Directly applicable Overall quality: (e) Potentially serious limitations

Abbreviations: CUA= cost—utility analysis; GI= gastrointestinal; ICER= incremental cost-effectiveness ratio; Inc.= incremental; Int.= intervention; MI= myocardial infarction; NHS= National Health Service; NR= not reported; NSAID= non-steroidal anti-inflammatory drug; PPI= proton pump inhibitor; QALYs= quality-adjusted life years; RCT= randomised controlled trial; UK= United Kingdom; WOMAC= Western Ontario and McMaster Universities osteoarthritis index.

- (a) Assumed that treatment effects do not persist after treatment is terminated. However, the model does include the continuing effect on a person's remaining lifetime of any adverse events that have occurred within the treatment period.
- (b) Intervention number in order of least to most costly
- (c) Full incremental analysis of available strategies: first strategies are ruled out that are dominated (another strategy is more costly and is less effective) or subject to extended dominance (the strategy is more costly and more effective but the incremental cost effectiveness ratio is higher than the next most effective option and so it would never be the most cost effective option); incremental costs, incremental effects and incremental cost effectiveness ratios are calculated for the remaining strategies by comparing each to the next most effective option.

etoricoxib + PPI becomes most cost effective option.

A scenario analysis was also undertaken adjusting the starting age of the population to 65 to reflect a population with greater baseline gastrointestinal and cardiovascular risk. In this population, celecoxib + PPI remains the most cost effective option.

#### **Data sources**

**Health outcomes:** Three large RCTs (TARGET, CLASS and MEDAL) reporting adverse events: gastrointestinal (dyspepsia, symptomatic ulcer, and gastrointestinal bleed) and cardiovascular (myocardial infarction, stroke, and heart failure).

**Quality-of-life weights:** Utility estimates for treatments and no adverse events were derived using a mapping technique from a meta-analysis of WOMAC scores. Utility weights for adverse events were identified in the literature. All identified estimates were multiplied by general UK population age-specific utility scores. **Cost sources:** NHS Reference Costs 2007/08, British National Formulary 2008

#### Comments

**Source of funding:** National Institute for Health and Clinical Excellence. **Limitations:** Study does not include all comparators being assessed in the review. 2008 units costs may not reflect the current NHS context. Utilities were not derived directly from EQ-5D questionnaire, but from mapping from WOMAC. Further RCTs have been published for some of the comparators and therefore treatment effects may not reflect the full body of evidence. Unclear source of estimates for resource use. **Other:** None.

### Overall applicability: (b) Directly applicable Overall quality: (c) Potentially Serious limitations

Perspective: UK NHS							

Time horizon: Lifetime Treatment effect duration: (a) 3 months Discounting: Costs: 3.5%; Outcomes: 3.5%	13: Fixed-dose NSAID with gastroprotection - Diclofenac 150mg + misoprostol 400mg 14: Fixed-dose NSAID with gastroprotection - Naproxen 1000mg + esomeprazole 40mg 15: Fixed-dose NSAID with gastroprotection - Ketoprofen 200mg + omeprazole 20mg		Results for a 2-year treatment duration are similar to those of a 3-month duration with etoricoxib + PPI the most cost effective option. The NSAID + PPI combination was also found to be more cost effective than the NSAID alone due to the reduced adverse events resulting from the PPI over the longer term.  A scenario analysis was also undertaken adjusting the starting age of the population to 65 to reflect a population with greater baseline gastrointestinal and cardiovascular risk. In this population, etoricoxib + PPI remains the most cost effective option.

#### **Data sources**

**Health outcomes:** Adverse event data for NSAIDs and COX-2 inhibitors were taken from three large RCTs (TARGET, CLASS and MEDAL). The main source of adverse event data for paracetamol was an observational study by De Vries 2010. Data for symptomatic ulcers with paracetamol were taken from a study by Rodriguez 2004, while GI symptoms were assumed to be equivalent to ibuprofen. The hazard ratio for moderate CKD due to NSAIDs was based on observational data from Hippisley-Cox 2010, which was subsequently applied to all drugs in the model (including paracetamol).

**Quality-of-life weights:** Utility estimates for treatments and no adverse events were derived using a mapping technique from a meta-analysis of WOMAC scores conducted by the NGC. Utility weights for adverse events were identified in the literature. All identified estimates were multiplied by general UK population age-specific utility scores. **Cost sources:** NHS Reference Costs 2011/12, Drug Tariff October 2012, Personal Social Services Research Unit 2012

#### Comments

**Source of funding:** National Institute for Health and Clinical Excellence. **Limitations:** Study does not include all comparators being assessed in the review. Unit costs from 2012 may not reflect the current NHS context. Utilities were not derived directly from EQ-5D questionnaire but were mapped from WOMAC. Further RCTs have been published for some of the comparators and therefore treatment effects may not reflect the full body of evidence. Unclear source of estimates for resource use in dyspepsia, symptomatic ulcer and complicated GI events. **Other:** It was assumed there is equal efficacy between NSAIDs and COX-2 inhibitors as well as between different drug doses in the absence of evidence. It was also assumed that treatment with NSAIDs and COX-2 inhibitors is stopped after any serious GI, CV or CKD event, and patients switched to topical ibuprofen.

### Overall applicability:(b) Directly applicable Overall quality:(c) Minor limitations

Abbreviations: CKD= chronic kidney disease; COX-2= cyclooxygenase 2; CUA= cost—utility analysis; CV= cardiovascular; EQ-5D= Euroqol 5 dimensions (scale: 0.0 [death] to 1.0 [full health], negative values mean worse than death); GI= gastrointestinal; GP= general practitioner; ICER= incremental cost-effectiveness ratio; Inc.= incremental; Int.= Intervention; NGC: National Guideline Centre; NHS= National Health Service; NR= not reported; NSAID= non-steroidal anti-inflammatory drug; OA= osteoarthritis; PPI= proton

pump inhibitor; QALYs= quality-adjusted life years; RCT= randomised controlled trial; UK= United Kingdom; WOMAC= Western Ontario and McMaster Universities osteoarthritis index.

- (a) Assumed that treatment effects do not persist after treatment is terminated. However, the model does include the continuing effect on a person's remaining lifetime of any adverse events that have occurred within the treatment period.
- (b) Directly applicable / Partially applicable / Not applicable
- (c) Minor limitations / Potentially serious limitations / Very serious limitations
- (d) Intervention number in order of least to most costly
- (e) Full incremental analysis of available strategies: first strategies are ruled out that are dominated (another strategy is more costly and is less effective) or subject to extended dominance (the strategy is more costly and more effective but the incremental cost effectiveness ratio is higher than the next most effective option and so it would never be the most cost effective option); incremental costs, incremental effects and incremental cost effectiveness ratios are calculated for the remaining strategies by comparing each to the next most effective option.

### **Oral versus topical NSAIDs**

Study	Castelnuovo 2008/Underw	vood 2008 <sup>88</sup>		
Study details	Population & Interventions	Costs	Health outcomes	Cost effectiveness
Economic analysis: CUA (health outcome: QALYs)  Study design: Within-trial analysis of Underwood 2008 506  Approach to analysis: Analysis of individual level quality of life and resource use data adjusted by age and gender, and baseline utility for QALYs. Unit costs applied. Randomised trial and patient preference study undertaken. Data reported here is from the trial data only.  Perspective: UK NHS and societal perspective (only NHS perspective reported here) Time horizon: 12 months Treatment effect duration: (a) 12 months Discounting: Costs: 3.5% (in sensitivity analyses); Outcomes: 3.5% (in sensitivity analyses)	Population: People aged 50 years and over who had troublesome pain in or around the knee on most days for at least a month as well as knee pain for >3 months in the preceding year; and had consulted or been prescribed treatment by a GP for knee pain in the preceding 3 years. Radiological diagnosis of OA was not required. Cohort settings: Start age: NR Male: NR  Intervention 1: Topical ibuprofen  Intervention 2: Oral ibuprofen	Total costs (mean per patient): Intervention 1: NR Intervention 2: NR Incremental cost: 2-1: £191.40  Currency & cost year: UK pounds 2006 Cost components incorporated: GP appointments, outpatient consultations, physiotherapy services, diagnostic tests (blood tests, X-rays, gastroscopies, hospital admissions, prescriptions. Societal perspective also included the number and cost of equipment or other aids, privately acquired or dispensed by the NHS, and private treatment (GP and nurse consultations, referrals and hospital admissions, nursing or other help.	QALY gain (mean per patient): Intervention 1: NR Intervention 2: NR Incremental QALYs: 2-1: 0.021	intervention 1): £9,114 per QALY gained Probability Intervention 2 cost effective (£30K threshold): 80%  Analysis of uncertainty: 24-month time horizon shows that oral ibuprofen remains cost effective ICER: £11,976 per QALY gained. Probability Intervention 2 cost effective (£30K threshold): 55%  The cost effectiveness of oral ibuprofen remained robust to the following sensitivity analyses: costs of admissions based on actual length of stay reported in discharge notes, excluding high cost individuals, increasing the discount rate to 6%, using the total cost of any drug prescribed (to test assumptions around which costs were related to knee pain).

#### Data sources

**Health outcomes:** QALYs were calculated using patient-level EQ-5D data collected at baseline, 3, 6,12 and 24 months. Area under the curve approach was used and with adjustments for health utility at baseline, age and gender. **Quality-of-life weights:** EQ-5D UK tariff. **Cost sources:** UK national sources such as NHS Reference costs (2005), Prescription Cost Analysis Database (2004) inflated using Healthcare Price Index, and PSSRU (2005).

#### Comments

**Source of funding:** NHS Health Technology Assessment Programme. Goldshield Pharmaceuticals supplied the starter packs of topical ibuprofen. **Limitations:** Study does not include all comparators being assessed in the review. Resource use (2003-2005) and inflated unit costs (2006) may not reflect current UK NHS practice. Within-trial analysis and so may not reflect full body of available evidence for this comparison; 1 of 7 studies included in the clinical review for topical versus oral NSAID. A longer time horizon may be preferable given that oral ibuprofen seems to become less cost effective over time. **Other:** None.

### Overall applicability: Partially applicable(b) Overall quality: Potentially serious limitations(c)

Abbreviations: CUA= cost—utility analysis; EQ-5D= Euroqol 5 dimensions (scale: 0.0 [death] to 1.0 [full health], negative values mean worse than death); GP= general practitioner; ICER= incremental cost-effectiveness ratio; NHS= National Health Service; NR= not reported; NSAID= non-steroidal ant-inflammatory drug; PSSRU= Personal Social Services Research Unit; QALYs= quality-adjusted life years; UK= United Kingdom; WOMAC= Western Ontario and McMaster Universities osteoarthritis index.

- (a) Assumed that treatment effects do not persist after treatment is terminated. However, the model does include the continuing effect on a person's remaining lifetime of any adverse events that have occurred within the treatment period.

- (c) Minor limitations / Potentially serious limitations / Very serious limitations

### **Glucosamine**

Study	Black 2009 <sup>55</sup>			
Study details	Population & interventions	Costs	Health outcomes	Cost effectiveness
Economic analysis: CUA (health outcome: QALYs)  Study design: Probabilistic decision analytic model  Approach to analysis: Cohort simulation with 12-month cycle length. Rather than using discrete health states, health was modelled along a continuum given the initial baseline level of health status. Two additional discrete health states were used: progression to total knee replacement, and death. Individuals would only remain in the progression to TKR health state for one cycle before returning to non-progressive cohort. Individuals were assumed to remain on glucosamine until death.  Perspective: UK NHS Time horizon: Lifetime Treatment effect duration: Lifetime(a) Discounting: Costs: 3.5%; Outcomes: 3.5%	Population: People with knee osteoarthritis  Cohort settings: Start age: NR (mean life expectancy 22.61 years) Male: NR  Intervention 1: Usual care  Intervention 2: Usual care plus glucosamine sulphate	Total costs (mean per patient): Intervention 1: £4,634 Intervention 2: £7,039 Incremental (2–1): £2,405 (95% CI: NR; p=NR)  Currency & cost year: 2008 UK pounds Cost components incorporated: GP visits, medications, outpatient visits, inpatient care, professions allied to medicine consultations, complementary therapist and X-ray procedures	QALYs (mean total): Intervention 1: 8.17 Intervention 2: 8.28 Incremental (2–1): 0.11 (95% CI: NR; p=NR)	ICER (Intervention 2 versus Intervention 1): £21,335 per QALY gained (pa) 95% CI: NR Probability Intervention 2 cost effective (£20K threshold): 43%  Analysis of uncertainty: One-way sensitivity analyses undertaken on cost of glucosamine sulphate, discount rate, proportion of patients requiring total knee replacement, healthcare costs, quality of life scores suggest that the results were reasonably robust to the estimates used.

#### **Data sources**

**Health outcomes:** Used baseline and follow up WOMAC scores data reported in Pavelka 2002 to estimate quality of life. Annual quality of life decrement applied to account for progression in disease. Probability of total knee replacement was derived from Bruyere 2008 (pooled data from two placebo controlled RCTs of glucosamine sulphate). Probability of death was estimated from age-specific all-cause life tables. Quality of life for people prior to total knee replacement was estimated from baseline WOMAC scores was reported in Nunez 2007. **Quality-of-life weights:** Utilities obtained from mapping of

clinical outcome WOMAC into HUI3 (Grootendorst 2007). **Cost sources:** Resource use estimated from a UK study, Lord 1999- RCT of primary carebased education for knee osteoarthritis with resource use data collected from case notes, supplemented by patient interviews. Unit costs updated to 2007/08 prices. 2007/08 NHS reference costs used to estimate the cost of total knee replacement. UK market prices of glucosamine hydrochloride was used as an estimate of glucosamine sulphate.

#### Comments

**Source of funding:** National Institute of Health Research Health Technology Assessment programme **Limitations:** Study does not include all comparators being assessed in the review. Resource use (1999) and unit costs (2008) may not reflect current NHS practice. Utilities were not derived directly from EQ-5D questionnaire in line with NICE reference case but were instead mapped from WOMAC to HUI3. Further RCTs have been published for reporting quality of life and so treatment effects may not reflect the full body of evidence.<sup>82, 184, 293</sup> **Other:** None.

Overall applicability:(b) Directly applicable Overall quality:(c) Potentially serious limitations

Abbreviations: 95% CI= 95% confidence interval; CUA= cost—utility analysis; EQ-5D= Euroqol 5 dimensions (scale: 0.0 [death] to 1.0 [full health], negative values mean worse than death); ICER= incremental cost-effectiveness ratio; HUI3= health utilities index 3; NHS= National health Service; NR= not reported; RCT= randomised controlled trial; QALYs= quality-adjusted life years; UK= United Kingdom; WOMAC= Western Ontario and McMaster Universities osteoarthritis index.

#### **Analysis of uncertainty:**

Sensitivity analysis undertaken adjusting for the fact that different studies used different time points. In this case, longer study data was used at all time points. For example, for a 36 month study, 8.3% of the global effect at month 3 and 16.7% of the global effect at month 6 was used. In this case, pCGS no longer cost effective, and other forms of glucosamine are dominated by placebo at all time points.

#### **Data sources**

Health outcomes: The model simulated individual utility values from 10 clinical trials cited in the meta-analysis of Eriksen 2014 that used WOMAC. 100, 103, 106, 186, 200, 236, 241, 339, 388, 409 It firstly used the SIMNORMAL procedure of SAS® and published summary statistics to simulate WOMAC scores, age and years since osteoarthritis diagnosis. Any simulated values outside permissible ranges were discarded. WOMAC scores were then converted into HUI3 utility values using the equation provided by Grootendorst 2007. This method was validated by comparing to a study where individual health utility values were published and for which access were available to individual WOMAC scores, age and years at baseline and after 3 months of treatment. QALYs were calculated using the area-under-the-curve method. If more than one study was available for a time point, studies were weighted according to the number of subjects included in the trial. Note: of the 10 clinical trials cited in Eriksen 2014 used to calculate WOMAC scores, eight were included in our clinical review, 100, 103, 106, 186, 200, 236, 241, 388 and two were excluded. 339, 409 Of the two excluded, one had no usable outcomes, 409 and the other used an incorrect glucosamine dosage. 339 Quality-of-life weights: n/a.

Cost sources: Selling prices of different formulations in the different countries were obtained from IMS Health Data (December 2017). Prescription crystalline glucosamine was separated from other forms of glucosamine. An overall average price was taken. To reduce variability all prices that were lower than the average price by 50% or greater were excluded. A new average was then calculated which was defined as the 'higher' value cost range. Similarly, all prices higher than the average by 50% or greater were excluded and a new average calculated which was defined as the 'lower' value of the price range. The analysis for glucosamine therefore used three costs; median cost, higher cost and lower cost.

#### Comments

**Source of funding:** MEDA (marketing authorisation holder of crystalline glucosamine sulphate). **Limitations:** Study does not include all comparators being assessed in the review. Study only incorporates the cost of glucosamine and no other resource use and therefore costs may not be fully represented. Utilities were not derived directly from EQ-5D questionnaire in line with NICE reference case but were instead mapped from WOMAC to HUI3. Our clinical review also identified six studies reporting WOMAC pain scores that were not identified in the study. 82, 243, 293, 415, 429, 574 **Other:** None.

Overall applicability:(b) Partially applicable Overall quality:(c) Potentially serious limitations

Abbreviations: 95% CI= 95% confidence interval; CUA= cost\_utility analysis; EQ-5D= Euroqol 5 dimensions (scale: 0.0 [death] to 1.0 [full health], negative values mean worse than death); HUI3= health utility index 3; ICER= incremental cost-effectiveness ratio; Int.= intervention; NR= not reported; pCGS= prescription crystalline glucosamine sulphate; QALYs= quality-adjusted life years; WOMAC= Western Ontario and McMaster Universities osteoarthritis index.

Study	Scholtissen 2010 <sup>454</sup>			
Study details	Population & interventions	Costs	Health outcomes	Cost effectiveness
Economic analysis: CUA (health outcome: QALYs)  Study design: Withintrial analysis  Approach to analysis: Analysis of individual level data for quality of life from single RCT. Drug costs used to estimate costs.  Perspective: Spanish healthcare system  Time horizon: 6 months  Treatment effect duration: 6 months  Discounting: Costs: n/a; Outcomes: n/a	Population: People with symptomatic osteoarthritis  Cohort settings: Start age: 64 Male: 12%  Intervention 1: No treatment (placebo) Intervention 2: Paracetamol, 3000mg per day Intervention 3: Glucosamine, 1500mg once daily	Total costs (mean per patient): Intervention 1: £2.68 Intervention 2: £46.91 Intervention 3: £37.56  Incremental (2–1): £44.23 Intervention (3–2): saves £9.41 (95% CI: NR; p=NR)  Currency & cost year: 2009 Spanish Euros (converted into 2009 UK pounds) <sup>(a)</sup> Cost components incorporated: Drug costs only adjusted for compliance. Other healthcare costs were assumed to be comparable between treatment groups.	QALYs (mean per patient): Intervention 1: NR Intervention 2: NR Intervention 3: NR Incremental (3–1): 0.01 Incremental (3–2): 0.01 (95% CI: NR; p=NR)	Intervention 2 dominated by intervention 3.  ICER (Intervention 3 versus Intervention 1): £3,488 per QALY gained (da)  95% CI: NR  Probability Intervention 3 cost effective (€20K (£19K) threshold): 71%  Analysis of uncertainty: None undertaken.

#### Data sources

**Health outcomes:** Treatment effects on WOMAC scores from the GUIDE trial. **Quality-of-life weights:** WOMAC scores mapped to HUI to determine utility scores. **Cost sources:** Drug costs from Spanish market prices.

#### Comments

**Source of funding:** ESCEO-Amgen grant from the European Society for Clinical and Economical Aspect of Osteoarthritis and Osteoporosis and by Rottapharm, Italy. **Limitations:** Study does not include all comparators being assessed in the review. Spanish resource use and unit costs (2009) may not reflect current UK NHS practice. Utilities were not derived directly from the EQ-5D questionnaire in line with the NICE reference case but were instead mapped from WOMAC to HUI-3. Time horizon may not capture the change in benefit over time. Treatment effects determined from one trial and so may not reflect the full body of evidence. No analysis of uncertainty undertaken.

Other: None.

Overall applicability:(b) Partially applicable Overall quality:(c) Potentially serious limitations

# Appendix I - Excluded studies

### **Clinical studies**

Table 26: Studies excluded from the clinical review

Study	Exclusion reason
Aagaard 1975 <sup>1</sup>	Abstract only
Abbasifard 2020 <sup>2</sup>	Inappropriate comparison
Abdel shaheed 2019 <sup>4</sup>	Systematic review; references checked
Abdel shaheed 2021 <sup>3</sup>	Not review population (any painful condition included)
Abruzzo 1979 <sup>5</sup>	Abstract only
Acevedo 2001 <sup>6</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom)
Adler 2002 <sup>7</sup>	Inappropriate comparison (compared tramadol to a different formulation of tramadol)
Afilalo 20098	Abstract only
Agrati 19929	Not available in English language
Algozzine 1982 <sup>10</sup>	Incorrect interventions (included trolamine salicylate which is not licensed for use in the United Kingdom)
Allegrini 2009 <sup>11</sup>	Incorrect stratum (spinal osteoarthritis). Inappropriate comparison (included transdermal non-steroidal anti-inflammatory drugs, which are not included in the protocol and compared them to topical non-steroidal anti-inflammatory drugs)
Altman 1994 <sup>13</sup>	Type of osteoarthritis not clearly defined and so not able to stratify (topical treatment)
Altman 2015 <sup>15</sup>	Incorrect study design
Altman 2016 <sup>14</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Altman 2018 <sup>12</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Amadio 1985 <sup>17</sup>	Incorrect stratum (spinal osteoarthritis)
Amadio jr 1983 <sup>16</sup>	No usable outcomes (reported adverse events that could not be categorised into the protocol adverse events outcomes without making the number of participants who had any events in that category unclear)
Amako 1978 <sup>18</sup>	Not available in English language
Amirpour 2016 <sup>19</sup>	Incorrect interventions (included colchicine which is not an included intervention)
Andelman 1980 <sup>20</sup>	Incorrect interventions (included zomepirac which is not licensed for use in the United Kingdom)
Anon 1992 <sup>153</sup>	Not available in English language
Anon 2004 <sup>170</sup>	Report only
Anon 2018 <sup>25</sup>	Inappropriate comparison (compared glucosamine and physiotherapy to glucosamine alone, which is not a valid comparison in the protocol)
Anonymous 2002 <sup>21</sup>	Article only
,	•
Anonymous 2008 <sup>22</sup>	Abstract only

Study	Exclusion reason
Aran 2011 <sup>24</sup>	Incorrect interventions (included colchicine which is not an included intervention)
Arcangeli 1996 <sup>26</sup>	Incorrect stratum (spinal osteoarthritis). Inappropriate comparison (compared different formulations of non-steroidal anti-inflammatory drugs)
Armagan 2015 <sup>27</sup>	Incorrect interventions (included home exercise programs compared to glucosamine)
Arti 2012 <sup>28</sup>	Inappropriate comparison (compared glucosamine and alendronate to glucosamine alone)
Aylward 1985 <sup>29</sup>	Inappropriate comparison (compared two different non-steroidal anti-inflammatory drugs )
Backhouse 1986 <sup>30</sup>	Letter only
Bacon 2002 <sup>31</sup>	Inappropriate comparison (compared two different formulations of paracetamol)
Bannuru 2014 <sup>34</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Bannuru 2015 <sup>33</sup>	Systematic review is not relevant to review question or unclear PICO (included intra-articular pharmacological agents, which are considered in a different review question)
Bannuru 2016 <sup>32</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Baraf 2007 <sup>35</sup>	Incorrect stratum (included spinal osteoarthritis). Wrong comparison (compared two different non-steroidal anti-inflammatory drugs).
Baraf 2011 <sup>36</sup>	Post-hoc analysis (a secondary analysis included three trials, two of which are included in this review [Barthel 2010 <sup>38</sup> and Barthel 2009 <sup>37</sup> ], while the third is unpublished evidence.)
Barthel 2010 <sup>38</sup>	Post-hoc analysis (a secondary analysis of two trials reporting outcomes which would not be able to be extracted)
Becker 2003 <sup>40</sup>	Health economic analysis only (no usable outcomes for clinical evidence)
Becker 2009 <sup>39</sup>	Protocol only
Becvár 1996 <sup>41</sup>	Abstract only
Bellamy 2006 <sup>42</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Bensen 2000 <sup>43</sup>	People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis and malignancy)
Berry 1981 <sup>45</sup>	Incorrect interventions (included zomepirac which is not licensed for use in the United Kingdom)
Berry 1992 <sup>44</sup>	Incorrect interventions (included lornoxicam which is not licensed for use in the United Kingdom)
Bianchi 2003 <sup>47</sup>	No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
Bianchi 2004 <sup>46</sup>	Not available in English language
Bianchi 2007 <sup>48</sup>	Incorrect interventions (included nimesulide which is not licensed for use in the United Kingdom)
Bias 2004 <sup>49</sup>	Not guideline condition (included healthy participants). Not review population

Study	Exclusion reason
Bihlet 2020 <sup>50</sup>	Inappropriate comparison (all compounds contain a topical non- steroidal anti-inflammatory drugs)
Bin 2007 <sup>51</sup>	Inappropriate comparison (compared two different non-steroidal anti-inflammatory drugs)
Biondi 2010 <sup>52</sup>	Abstract only
Bird 1995 <sup>53</sup>	Incorrect interventions (included pentazocine which is not licensed for use in the United Kingdom)
Bisicchia 2017 <sup>54</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Blardi 1992 <sup>56</sup>	Incorrect interventions (included nimesulide which is not licensed for use in the United Kingdom)
Blechman 1978 <sup>57</sup>	No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
Blechman 1987 <sup>58</sup>	No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
Bohlooli 2012 <sup>59</sup>	Incorrect interventions (included topical virgin olive oil, which is not included in the protocol)
Boissier 1992 <sup>60</sup>	Inappropriate comparison (compared dextropropoxyphene and paracetamol to codeine and paracetamol, dextropropoxyphene is not licensed for use in the United Kingdom)
Bolten 1989 <sup>61</sup>	Not available in English language
Bolten 2015 <sup>62</sup>	Not guideline condition (included healthy participants). Not review population
Boswell 2008 <sup>63</sup>	Pooled analysis of two RCTs with different study designs
Bourgeois 1994 <sup>64</sup>	Incorrect interventions (included nimesulide which is not licensed for use in the United Kingdom)
Brereton 2012 <sup>66</sup>	Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated)
Bress 1981 <sup>67</sup>	Abstract only
Bress 1981 <sup>68</sup>	Incorrect interventions (included diflunisal which is not licensed for use in the United Kingdom)
Broll 1986 <sup>69</sup>	Inappropriate comparison (compared two different formulations of an non-steroidal anti-inflammatory drugs). Incorrect interventions (included zidometacin which is not licensed for use in the United Kingdom)
Browning 1994 <sup>70</sup>	Inappropriate comparison (compared topical and oral non-steroidal anti-inflammatory drugs to oral non-steroidal anti-inflammatory drugs only)
Bruhlmann 2003 <sup>72</sup>	Incorrect interventions (included transdermal non-steroidal anti- inflammatory drugs which were not included in the protocol)
Bruhlmann 2006 <sup>71</sup>	Incorrect interventions (included transdermal non-steroidal anti- inflammatory drugs which were not included in the protocol)
Bruyere 2003 <sup>74</sup>	No relevant outcomes (no standard deviation reported and no way to calculate this from the information available)
Bruyere 2019 <sup>75</sup>	Incorrect study design (health economic study only with no usable clinical outcomes)
Burch 2004 <sup>77</sup>	Incorrect study design (non-randomised trial)
Burke 1975 <sup>79</sup>	Abstract only
Burke 1976 <sup>78</sup>	Incorrect interventions (included floctafenine which is not licensed for use in the United Kingdom)

Study	Exclusion reason
Buxton 1978 <sup>80</sup>	Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated) (included a mixture of different types of osteoarthritis, included spinal osteoarthritis). Incorrect interventions (included floctafenine which is not licensed for use in the United Kingdom)
Buynak 2015 <sup>81</sup>	Not review population (people with low back pain)
Calabro 1977 <sup>83</sup>	No usable outcomes (reported adverse events that could not be categorised into the protocol adverse events outcomes without making the number of participants who had any events in that category unclear)
Caldwell 1999 <sup>84</sup>	Unclear if blinding sufficient (all participants took part in open-label run in of intervention while taking opioids and then stopped the medicine for some participants. Given that an adverse event with opioids are withdrawal symptoms, this did not appear to maintain blinding and did not appear comparable with other studies)
Cameron 2013 <sup>85</sup>	Systematic review is not relevant to review question or unclear PICO (included topical herbal remedies, which were not included in our protocol)
Campbell 2017 <sup>86</sup>	Not review population (included people with other pain conditions)
Cannon 2000 <sup>87</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom)
Cazzagon 1976 <sup>89</sup>	Incorrect stratum (included people with spinal osteoarthritis). Incorrect interventions (included diftalone which is not licensed for use in the United Kingdom)
Cen 2018 <sup>90</sup>	Inappropriate comparison (compared glucosamine and intraarticular hyaluronic acid to intraarticular hyaluronic acid alone). Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Cepeda 2006 <sup>91</sup>	Systematic review is not relevant to review question or unclear PICO (Cochrane review, included a different definition of outcomes [for example: serious adverse events])
Chandanwale 2014 <sup>92</sup>	People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis and malignancy). Inappropriate comparison (compared tramadol and diclofenac to tramadol and paracetamol, which is not a comparison included in the protocol)
Chen 2019 <sup>94</sup>	Systematic review; references checked (insufficient quality assessment)
Chen 2019 <sup>93</sup>	Systematic review; references checked (insufficient quality assessment)
Cheung 2010 <sup>96</sup>	People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis and malignancy)
Chiozzini 1988 <sup>97</sup>	Abstract only
Choi 2007 <sup>98</sup>	Inappropriate comparison (compares tramadol and paracetamol to a different method of delivering the combination)

Study	Exclusion reason
Choi 2017 <sup>99</sup>	Systematic review is not relevant to review question or unclear PICO. Incorrect interventions (included moxibustion which is not included in the protocol)
Chopra 2011 <sup>101</sup>	Dose of glucosamine is below the licensed dose (1178 mg/day)
Choquette 2008 <sup>102</sup>	Incorrect study design
Cibere 2005 <sup>104</sup>	No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
Cirillo 1978 <sup>105</sup>	Incorrect interventions (included diflunisal which is not licensed for use in the United Kingdom)
Coats 2004 <sup>107</sup>	Not guideline condition. Not review population (other pain conditions). Inappropriate comparison (included valdecoxib which is not licensed for use in the United Kingdom)
Conaghan 2011 <sup>108</sup>	Incorrect interventions (included transdermal opioids and paracetamol compared to weak opioids and paracetamol, which is not included in the protocol)
Concoff 2017 <sup>109</sup>	Systematic review is not relevant to review question or unclear PICO (included intra-articular pharmacological agents, which are considered in a different review question)
Corsinovi 2009 <sup>110</sup>	Inappropriate comparison (compared strong opioids and paracetamol)
Crolle 1980 <sup>111</sup>	Incorrect interventions (included intramuscular and intra-articular glucosamine which is not included in the protocol)
Da 2012 <sup>114</sup>	Systematic review is not relevant to review question or unclear PICO (included doxycycline which is not included in the protocol)
Da 2014 <sup>113</sup>	Systematic review is not relevant to review question or unclear PICO (did not include tramadol as an opioid, included outcomes that were not included in this review)
Da costa 2017 <sup>116</sup>	Systematic review is not relevant to review question or unclear PICO (included outcomes that were not included in this review, compared different doses of medicines which were examined by class effect in this review)
da Costa 2021 <sup>115</sup>	Systematic review; references checked (systematic review was a network meta analysis with significantly different methodology, including the inclusion of medications not licensed for use in the UK, a different outcome prioritisation system, using different definitions for outcomes and using a different minimally important clinical difference definition)
Dahlberg 2009 <sup>117</sup>	Inappropriate comparison (compared two non-steroidal anti-inflammatory drugs)
Dai 2019 <sup>118</sup>	Inappropriate comparison (compared two hyaluronic acid products). Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
D'ambrosio 1981 <sup>112</sup>	Incorrect interventions (included intra-venous/intra-muscular piperazine/chlorbutanol which are not included in the protocol)
Datto 2013 <sup>119</sup>	Systematic review is not relevant to review question or unclear PICO (included only specific non-steroidal anti-inflammatory drugs and gastroprotection combinations)
Day 2000 <sup>120</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom)
De 2012 <sup>126</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)

Study	Exclusion reason
De beer jde 2005 <sup>121</sup>	Post-operative analgesia. Inappropriate comparison (compared oxycodone to standard therapy, which was not included in the protocol)
De miquel 1987 <sup>123</sup>	Incorrect interventions (included piketoprofen and hydroxyphenylbutazone which are not licensed for use in the United Kingdom)
De moor 1990 <sup>124</sup>	Abstract only
De pouvourville 1991 <sup>125</sup>	Not available in English language
De vos 2017 <sup>127</sup>	No appropriate outcomes (no standard deviation reported and no way to calculate this from the information available)
Debelle 1981 <sup>128</sup>	No appropriate outcomes (no standard deviation reported and no way to calculate this from the information available)
Decousus 1990 <sup>129</sup>	Abstract only
Delfino 1996 <sup>130</sup>	Not available in English language
Deng 2016 <sup>131</sup>	Systematic review is not relevant to review question or unclear PICO (combined sites of osteoarthritis)
Dequeker 1998 <sup>132</sup>	Inappropriate comparison (compared two non-steroidal anti- inflammatory drugs)
Derry 2016 <sup>133</sup>	Systematic review is not relevant to review question or unclear PICO (Cochrane review, included people with chronic musculoskeletal pain, including conditions other than osteoarthritis)
Detora 2001 <sup>134</sup>	Incorrect interventions (included rofecoxib, which is not licensed for use in the United Kingdom)
Di rienzo businco 2004 <sup>135</sup>	Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated) (included people with temporomandibular joint dysfunction, not specified as osteoarthritis)
Dieu-donne 2016 <sup>136</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Ding 1996 <sup>137</sup>	Not available in English language
Ding 2005 <sup>138</sup>	Not available in English language
Doak 1992 <sup>139</sup>	No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
Doherty 1992 <sup>140</sup>	No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
Doi 2010 <sup>141</sup>	Inappropriate comparison (included transdermal non-steroidal anti- inflammatory drugs compared to oral non-steroidal anti- inflammatory drugs)
Dolanc 1982 <sup>142</sup>	Not available in English language
Douglas 2014 <sup>143</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Dreiser 1993 <sup>145</sup>	Not available in English language
Dreiser 1993 <sup>144</sup>	Not available in English language
Dreiser 1993 <sup>146</sup>	Incorrect interventions (included nimesulide which is not licensed for use in the United Kingdom)
Dreiser 1993 <sup>147</sup>	Incorrect interventions (included transdermal non-steroidal anti- inflammatory drugs)
Drovanti 1980 <sup>148</sup>	Incorrect stratum (spinal osteoarthritis)
Durg 2019 <sup>149</sup>	Incorrect interventions (included oxaceprol which is not licensed for use in the United Kingdom)

Study	Exclusion reason
Durmus 2012 <sup>151</sup>	Inappropriate comparison (compared exercise with glucosamine to exercise alone)
Durmus 2013 <sup>150</sup>	Inappropriate comparison (compared exercise with glucosamine to exercise alone)
Eberhardt 1995 <sup>152</sup>	Not available in English language
Eggertsen 2012 <sup>154</sup>	Not review population (people without osteoarthritis)
Ehrich 1999 <sup>156</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom)
Ehrich 2001 <sup>155</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom)
El mehairy 1974 <sup>157</sup>	Incorrect interventions (included niflumic acid and phenylbutazone which are not licensed for use in the United Kingdom)
Emery 2008 <sup>158</sup>	Inappropriate comparison (compared two non-steroidal anti- inflammatory drugs)
Emkey 2004 <sup>159</sup>	Inappropriate comparison (compared tramadol and paracetamol to placebo)
Enomoto 2018 <sup>160</sup>	Post-hoc analysis. No useable outcomes (no standard deviation reported and no way to calculate this from the information available)
Ergun 2007 <sup>161</sup>	Incorrect interventions (included nimesulide which is not licensed for use in the United Kingdom)
Eriksen 2014 <sup>162</sup>	Systematic review is not relevant to review question or unclear PICO (includes analysis that we were not conducting for this review, does not limit the dose of glucosamine)
Erturk 1998 <sup>163</sup>	Not available in English language
Essex 2012 <sup>164</sup>	Inappropriate comparison (compares two non-steroidal anti- inflammatory drugs)
Essex 2013 <sup>166</sup>	Abstract only
Essex 2014 <sup>165</sup>	Inappropriate comparison (compares two different delivery methods of an non-steroidal anti-inflammatory drugs)
Etropolski 2009 <sup>168</sup>	Abstract only
Etropolski 2011 <sup>462</sup>	Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated) (unclear disease, does not exclude rheumatoid arthritis)
Euppayo 2017 <sup>169</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Farkouh 2004 <sup>172</sup>	Incorrect interventions (included lumiracoxib which is not licensed for use in the United Kingdom)
Farkouh 2007 <sup>171</sup>	Incorrect interventions (included lumiracoxib which is not licensed for use in the United Kingdom)
Faundez 2016 <sup>173</sup>	Not in English language
Felden 2014 <sup>174</sup>	Not guideline condition. Not review population (included healthy participants). Inappropriate comparison (compared two non-steroidal anti-inflammatory drugs)
Ferreira 2018 <sup>175</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Fidelholtz 2011 <sup>176</sup>	Abstract only
Fidelix 2014 <sup>177</sup>	Systematic review is not relevant to review question or unclear PICO (included diacerin which is not included in the protocol)
Filatova 2017 <sup>179</sup>	Not available in English language

Conference abstract only Inappropriate comparison (compared capsaicin to mobilisation and a combination of the two) Inappropriate comparison (included lumiracoxib which is not licensed for use in the United Kingdom) Not available in English language Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question) Incorrect interventions (included aquamin which is not in the protocol)
a combination of the two) Inappropriate comparison (included lumiracoxib which is not licensed for use in the United Kingdom) Not available in English language Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question) Incorrect interventions (included aquamin which is not in the protocol)
licensed for use in the United Kingdom)  Not available in English language  Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)  Incorrect interventions (included aquamin which is not in the protocol)
Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question) Incorrect interventions (included aquamin which is not in the protocol)
agents, which are considered in a different review question) Incorrect interventions (included aquamin which is not in the protocol)
protocol)
Incorrect interventions (included loxoprofen which is not licensed for use in the United Kingdom)
Inappropriate comparison (compared different formulations of an non-steroidal anti-inflammatory drugs)
Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated). People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis and malignancy). Incorrect interventions (included transdermal non-steroidal anti-inflammatory drugs)
Incorrect study design (non-randomised study)
Includes healthy people. Inappropriate comparison (compares two different formulations of an non-steroidal anti-inflammatory drugs)
Wrong study type
Systematic review is not relevant to review question or unclear PICO
Systematic review is not relevant to review question or unclear PICO. Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Letter only
Abstract only
Inappropriate comparison (compares two non-steroidal anti- inflammatory drugs). Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated)
No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
No relevant outcomes (fMRI study, included radiological outcomes)
Not available in English language
No usable outcomes (reported adverse events that could not be categorised into the protocol adverse events outcomes without making the number of participants who had any events in that category unclear)
Wrong population (includes people with rheumatoid arthritis equalling 40% of the study population)
Inappropriate comparison (compared two non-steroidal anti- inflammatory drugs, one was not licensed for use in the United Kingdom)

Study	Exclusion reason
Goldstein 2007 <sup>205</sup>	Inappropriate comparison (compares two non-steroidal anti- inflammatory drugs to two non-steroidal anti-inflammatory drugs and gastroprotection)
Gor 2016 <sup>206</sup>	Inappropriate comparison (compared topical and oral non-steroidal anti-inflammatory drugs to oral non-steroidal anti-inflammatory drugs only)
Gottesdiener 2003 <sup>207</sup>	Erratum only
Grayson 1978 <sup>208</sup>	Inappropriate comparison (compared two non-steroidal anti- inflammatory drugs, one of which was not licensed for use in the United Kingdom)
Gregori 2018 <sup>209</sup>	Systematic review with different definition of time periods for outcomes. References checked.
Grifka 2004 <sup>210</sup>	Incorrect interventions (included lumiracoxib which is not licensed for use in the United Kingdom)
Grond 2009 <sup>212</sup>	Not available in English language
Grond 2009 <sup>211</sup>	Abstract only
Gross 1983 <sup>213</sup>	Not available in English language
Guedes 2018 <sup>214</sup>	Not available in English language
Guidolin 2018 <sup>215</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Guyot 2017 <sup>216</sup>	Systematic review; references checked (compared different types of non-steroidal anti-inflammatory drugs)
Haghighat 2013 <sup>217</sup>	Not review population (temporomandibular joint disorders)
Hale 2007 <sup>218</sup>	Inappropriate comparison (compared two formulations of an non- steroidal anti-inflammatory drugs)
Hale 2009 <sup>219</sup>	Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated). Inappropriate comparison (compares two strong opioids)
Han 2000 <sup>220</sup>	Not available in English language
Han 2017 <sup>221</sup>	Systematic review is not relevant to review question or unclear PICO. Incorrect interventions (included strontium ranolate which is not licensed for use in the United Kingdom)
Harrison-munoz 2017 <sup>222</sup>	Not available in English language
Hartrick 2009 <sup>223</sup>	No usable outcomes (reported adverse events that could not be categorised into the protocol adverse events outcomes without making the number of participants who had any events in that category unclear)
Hasegawa 2013 <sup>224</sup>	People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis and malignancy)
Hawel 2002 <sup>225</sup>	Abstract only
Hawel 2003 <sup>226</sup>	Inappropriate comparison (compares two non-steroidal anti- inflammatory drugs)
Hawkey 2000 <sup>227</sup>	No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
Hawkey 2004 <sup>228</sup>	Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated) (includes people with spinal osteoarthritis)
Hawkey 2008 <sup>229</sup>	Post-hoc analysis (of Schnitzer 2004 <sup>449</sup> )
-	· · · · · · · · · · · · · · · · · · ·

Study	Exclusion reason
Hayllar 1996 <sup>230</sup>	Incorrect interventions (included flosulide which is not licensed for
•	use in the United Kingdom)
He 2017 <sup>231</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Henriksen 2016 <sup>233</sup>	Systematic review; references checked (included exercise as an intervention)
Henriksen 2019 <sup>232</sup>	Insufficient follow up (<1 week)
Hepguler 1994 <sup>234</sup>	Not available in English language
Herrera 2003 <sup>235</sup>	Incorrect interventions (Rofecoxib and Nimesulide are not licensed for use in the United Kingdom)
Hochberg 2016 <sup>237</sup>	Inappropriate comparison (compared glucosamine and chondroitin to an non-steroidal anti-inflammatory drugs)
Holt 2015 <sup>238</sup>	Incorrect study design (secondary analysis of pooled analyses)
Honvo 2019 <sup>239</sup>	Systematic review; references checked
Hosie 1996 <sup>240</sup>	Inappropriate comparison (compares two non-steroidal anti-inflammatory drugs)
Huang 2011 <sup>242</sup>	Not available in English language
Hunt 2003 <sup>244</sup>	Not review population (people with rheumatoid arthritis)
Huskisson 1979 <sup>247</sup>	No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
Huskisson 1992 <sup>245</sup>	Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated). People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis and malignancy). Inappropriate comparison (compares two non-steroidal anti-inflammatory drugs)
Huskisson 1995 <sup>246</sup>	No usable outcomes (outcomes relate to imaging progression)
Itoh 2018 <sup>248</sup>	Post-hoc analysis (secondary analysis of another trial)
Iturriaga 2017 <sup>249</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
lyengar 2013 <sup>250</sup>	No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
Jamali, 2020 <sup>251</sup>	Wrong intervention (curcumin ointment)
James 1993 <sup>253</sup>	Inappropriate comparison (compared and non-steroidal anti- inflammatory drugs and weak opioid compared to an non-steroidal anti-inflammatory drugs alone)
James 2010 <sup>252</sup>	Incorrect interventions (compared two routes of the same strong opioid, included sublingual buprenorphine)
Jensen 1994 <sup>254</sup>	Incorrect interventions (included dextropropoxyphene which is not licensed for use in the United Kingdom)
Jones 2019 <sup>255</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Jung 2018 <sup>256</sup>	Systematic review is not relevant to review question or unclear PICO (included non-licensed form of non-steroidal anti-inflammatory drugs)
Jüni 2015 <sup>257</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)

Study	Exclusion reason
K. a. g. e. y. a. m. a. takamasa 1983 <sup>491</sup>	Not available in English language
Kafil 2003 <sup>258</sup>	Incorrect interventions (included nimesulide which is not licensed for use in the United Kingdom)
Kageyama 1984 <sup>261</sup>	Not available in English language
Kageyama 1985 <sup>263</sup>	Not available in English language
Kageyama 1985 <sup>262</sup>	Not available in English language
Kageyama 1986 <sup>259</sup>	Not available in English language
Kageyama 1986 <sup>260</sup>	Not available in English language
Kamath 2003 <sup>264</sup>	No usable outcomes (included cost-effectiveness data only)
Karlsson 2009 <sup>265</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Katz 2010 <sup>267</sup>	Inappropriate comparison (compared strong opioid and opioid antagonist to strong opioid only)
Katz 2010 <sup>266</sup>	Inappropriate comparison (compared strong opioid and opioid antagonist to strong opioid only)
Kavanagh 2009 <sup>268</sup>	Abstract only
Kavanagh 2012 <sup>269</sup>	Inappropriate comparison (compared two strong opioids)
Kellner 2013 <sup>270</sup>	No useable outcomes (no standard deviation reported and no way to calculate this from the information available)
Kelly 2009 <sup>272</sup>	Not available in English language
Kelly 2009 <sup>273</sup>	Abstract only
Kelly 2010 <sup>274</sup>	Abstract only
Kelly 2010 <sup>271</sup>	Abstract only
Khong 1991 <sup>275</sup>	Inappropriate comparison (compared two different formulations of an non-steroidal anti-inflammatory drugs)
Kilminster 1999 <sup>276</sup>	Inappropriate comparison (compared two different formulations of an non-steroidal anti-inflammatory drugs)
Kim 2012 <sup>277</sup>	Not available in English language
Kivitz 2006 <sup>279</sup>	No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
Kivitz 2008 <sup>278</sup>	Post-hoc analysis (post hoc analysis completed due to early termination of the trial)
Kjaersgaard-andersen 1990 <sup>280</sup>	No usable outcomes (outcomes reported in a manner that cannot be meta-analysed)
Knapik 2018 <sup>281</sup>	Systematic review; references checked (inadequate quality assessment)
Kongtharvonskul 2015 <sup>282</sup>	Systematic review is not relevant to review question or unclear PICO (included diacerein which is not included in the protocol)
Kongtharvonskul 2016 <sup>283</sup>	Inappropriate comparison (compares glucosamine and diacerein to glucosamine and placebo)
Krebs 2018 <sup>284</sup>	Not review population (low back pain)
Kress 2017 <sup>285</sup>	Not review population (mixture of pain causing conditions). Inappropriate comparison (compares weak opioid and paracetamol to paracetamol alone)
Kriegel 2001 <sup>286</sup>	Incorrect interventions (included nimesulide which is not licensed for use in the United Kingdom)
Kroon 2016 <sup>287</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)

Study	Exclusion reason
Kroon 2018 <sup>288</sup>	Systematic review is not relevant to review question or unclear PICO (mixture of interventions, inadequate quality assessment)
Kruger 2007 <sup>289</sup>	Incorrect interventions (included oxaceprol which is not licensed for use in the United Kingdom)
Kulkarni 2012 <sup>290</sup>	Incorrect interventions (compares two different formulations for glucosamine)
Kuntz 1976 <sup>291</sup>	Incorrect interventions (included benorylate which is not licensed for use in the United Kingdom)
Kuperwasser 2009 <sup>292</sup>	Abstract only
Kwong 2013 <sup>294</sup>	No usable outcomes (secondary analysis of Hartrick 2009 <sup>223</sup> )
Laine 2007 <sup>295</sup>	Not review population (people with rheumatoid arthritis)
Lange 2010 <sup>296</sup>	Abstract only
Laslett 2014 <sup>297</sup>	Systematic review; references checked (inadequate quality assessment)
Latimer 2009 <sup>298</sup>	Economic model of previous NICE guideline update
Le loet 2005 <sup>299</sup>	Incorrect study design (non-randomised)
Lee 1985 <sup>300</sup>	Incorrect interventions (included diflunisal which is not licensed for use in the United Kingdom)
Lee 1986 <sup>301</sup>	Incorrect interventions (included diflunisal which is not licensed for use in the United Kingdom)
Leeb 2004 <sup>302</sup>	Not available in English language
Lehn 1992 <sup>303</sup>	Inappropriate comparison (compares two different formulations of non-steroidal anti-inflammatory drugs)
Leighton 2018 <sup>304</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Leite 2018 <sup>306</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Leopoldino 2019 <sup>307</sup>	Systematic review is not relevant to review question or unclear PICO (Cochrane review, included different definitions of outcomes and only specific sites of osteoarthritis)
Lepisto 1978 <sup>308</sup>	Incorrect study design (non-randomised)
Lequesne 1997 <sup>309</sup>	Incorrect interventions (included floctafenine which is not licensed for use in the United Kingdom)
Leung 2015 <sup>311</sup>	Protocol only
Leung 2018 <sup>310</sup>	Incorrect interventions (included colchicine which is not included in the protocol)
Levy 2009 <sup>312</sup>	Incorrect interventions (included flavocoxid which is not licensed for use in the United Kingdom)
Li 2011 <sup>313</sup>	Not available in English language
Lindén 1994 <sup>314</sup>	Abstract only
Lisse 2001 <sup>315</sup>	Subgroup analysis where it is unclear what the original trial was
Lisse 2003 <sup>316</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Lloyd 1992 <sup>317</sup>	Inappropriate comparison (compares weak opioid and paracetamol to weak opioid only)
Louthrenoo 2007 <sup>318</sup>	Incorrect interventions (included diacerein which is not licensed for use in the United Kingdom)
Lubis 2017 <sup>319</sup>	Incorrect study design (pooled analysis with insufficient information about methods to permit extraction)

Study	Exclusion reason
Lussier 1980 <sup>320</sup>	Incorrect interventions (included floctafenine which is not licensed for use in the United Kingdom). Inappropriate comparison (compared two non-steroidal anti-inflammatory drugs).
Lussier 1983 <sup>321</sup>	Not guideline condition (health participants). Not review population
Lyttle 2016 <sup>322</sup>	Protocol only
Macdonald 2007324	Abstract only
Macdonald 2007 <sup>327</sup>	Incorrect interventions (included lumiracoxib which is not licensed for use in the United Kingdom)
Macdonald 2008 <sup>325</sup>	Incorrect interventions (included lumiracoxib which is not licensed for use in the United Kingdom)
Macdonald 2010 <sup>326</sup>	Incorrect interventions (included lumiracoxib which is not licensed for use in the United Kingdom)
Macdonald 2017 <sup>323</sup>	Inappropriate comparison (compared an non-steroidal anti- inflammatory drugs to standard care)
Machado 2015 <sup>328</sup>	Systematic review is not relevant to review question or unclear PICO. Incorrect stratum (spinal osteoarthritis)
Maheu 2019 <sup>330</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Malik 2017 <sup>331</sup>	Inappropriate comparison (compared two non-steroidal anti-inflammatory drugs)
Marcolongo 1977 <sup>332</sup>	No usable outcomes
Marini 2012 <sup>333</sup>	Incorrect interventions (included palmitoylethanolamide which is not included in the protocol)
Markenson 2005 <sup>334</sup>	Incorrect stratum (included people with rheumatoid arthritis)
Marshall 2006 <sup>335</sup>	Incorrect interventions (combination of oxycodone and paracetamol compared to standard care)
Matsunaga 1977 <sup>337</sup>	Not available in English language
Matsunaga 1983 <sup>336</sup>	Not available in English language
Matts 1983 <sup>338</sup>	Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated) (people with rheumatoid arthritis). Inappropriate comparison (compared paracetamol and antiemetic to paracetamol alone)
Mcalindon 2004 <sup>339</sup>	Dose of glucosamine is below the licensed dose (1178 mg/day)
Mccabe 2016 <sup>340</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Mccarthy 1992 <sup>341</sup>	People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis and malignancy) (included people with rheumatoid arthritis)
Mccleane 2000 <sup>342</sup>	Unable to stratify by population due to an insufficient number of people having the same type of osteoarthritis
Mckenna 1998 <sup>344</sup>	People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis and malignancy) (included people with rheumatoid arthritis)
Melo 2018 <sup>345</sup>	Systematic review; references checked (inadequate quality assessment)

Study	Exclusion reason
Micca 2013 <sup>346</sup>	Post-hoc analysis (of two other studies)
Mochizuki 2016 <sup>347</sup>	Not guideline condition. Not review population (perioperative). Inappropriate comparison (compared strong opioid and paracetamol to non-steroidal anti-inflammatory drugs alone)
Moldez 2018 <sup>348</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Mongin 2004 <sup>349</sup>	Inappropriate comparison (compares two different strong opioid regimens)
Monticone 2016 <sup>350</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Moorthy 2016 <sup>351</sup>	Inappropriate comparison (compares two strong opioids)
Moskowitz 2006 <sup>352</sup>	Incorrect interventions (included valdecoxib and rofecoxib which are not licensed for use in the United Kingdom)
Mu 2016 <sup>353</sup>	Incorrect interventions (included loxoprofen which is not licensed for use in the United Kingdom)
Mukhopadhyay 2018 <sup>354</sup>	Incorrect interventions (included oxaceprol which is not licensed for use in the United Kingdom)
Mullican 2001 <sup>355</sup>	Inappropriate comparison (compared strong opioid and paracetamol to weak opioid and paracetamol)
Murphy 1978 <sup>356</sup>	Not review population (included people with a range of non- osteoarthritis pathologies. Inappropriate comparison (compared non-steroidal anti-inflammatory drugs and paracetamol to weak opioid)
Myers 2014 <sup>357</sup>	Systematic review; references checked (inadequate quality assessment)
Myllykangas-luosujarvi 2002 <sup>358</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom)
Myrer 2004 <sup>359</sup>	Incorrect interventions (included herbal topical therapies which are not in the inclusion criteria)
Nagaya 1984 <sup>360</sup>	Not available in English language
Nakata 2018 <sup>361</sup>	Systematic review; references checked (inadequate quality assessment)
Nct 2009 <sup>362</sup>	Trial registry record only
Nct 2013 <sup>363</sup>	Trial registry record only
Ng 2010 <sup>364</sup>	Wrong comparison (exercise with glucosamine compared to a different dose of exercise with glucosamine)
Nissen 2016 <sup>365</sup>	Inappropriate comparison (compares three non-steroidal anti-inflammatory drugs)
Noble 2010 <sup>366</sup>	Systematic review is not relevant to review question or unclear PICO (Cochrane review, includes any person with chronic noncancer pain, not just osteoarthritis)
Ogata 2018 <sup>368</sup>	Systematic review; references checked (inadequate quality assessment)
O'hanlon 2016 <sup>367</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Ohtori 2013 <sup>369</sup>	Incorrect interventions (compares non-steroidal anti-inflammatory drugs and antiepileptic drugs to non-steroidal anti-inflammatory drugs only)
Olejarova 2008 <sup>370</sup>	Not available in English language

Study	Exclusion reason
Omololu 2005 <sup>371</sup>	Inappropriate comparison (compares two non-steroidal anti-inflammatory drugs)
Osani 2019 <sup>372</sup>	Systematic review; references checked (inadequate quality assessment)
Osani 2019 <sup>374</sup>	Systematic review; references checked (inadequate quality assessment)
Osani, 2021 <sup>373</sup>	Systematic review; references checked
Osteras 2017 <sup>375</sup>	Incorrect interventions (included exercise)
Ottillinger 2001 <sup>376</sup>	Incorrect interventions (included not licensed medicines)
Pai 2014 <sup>377</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Paik 2019 <sup>378</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Papalia 2017 <sup>380</sup>	Loan not available
Papalia 2017 <sup>379</sup>	Loan not available
Pareek 2009 <sup>382</sup>	Inappropriate comparison (compared non-steroidal anti- inflammatory drugs and paracetamol to non-steroidal anti- inflammatory drugs alone)
Pareek 2010 <sup>381</sup>	Inappropriate comparison (compared non-steroidal anti- inflammatory drugs and paracetamol to non-steroidal anti- inflammatory drugs alone)
Park 2008 <sup>385</sup>	Not available in English language
Park 2012 <sup>383</sup>	Inappropriate comparison (compared weak opioid and paracetamol to non-steroidal anti-inflammatory drugs)
Park 2020 <sup>384</sup>	Incorrect stratum (population is spinal osteoarthritis)
Patel 2017 <sup>386</sup>	Systematic review; references checked (inadequate quality assessment)
Pavelka jr 1995 <sup>387</sup>	Not available in English language
Pavlicević 2011 <sup>389</sup>	Not available in English language
Peeva 2009 <sup>391</sup>	Abstract only
Peeva 2010 <sup>392</sup>	Inappropriate comparison (included strong opioid and paracetamol to non-steroidal anti-inflammatory drugs)
Persson 2016 <sup>393</sup>	Protocol
Persson 2018 <sup>394</sup>	Incorrect interventions (included disease modifying agents of rheumatic disease)
Persson 2018 <sup>396</sup>	Individual patient data meta-analysis. Includes studies where there were comparators not included in this review (homeopathic remedies, chamomile oil, arnica, dwarf elder gel), includes forms of intervention not included in this review (for example: non-steroidal anti-inflammatory drugs patches) and includes an outcome where the types of scales used to populate it were different from those agreed for in this review (prioritising VAS scores for a pain outcome, rather than WOMAC/KOOS subscales).
Persson 2020 <sup>395</sup>	Not review population (mixed osteoarthritis for topical analgesia)
Petersen 2011 <sup>397</sup>	Incorrect interventions (medicines with exercise)
Petrick 1983 <sup>398</sup>	Incorrect interventions (included meclofenamate which is not licensed for use in the United Kingdom)
Pope 2004 <sup>399</sup>	Inappropriate comparison (compares diclofenac and misoprostal to standard care)
Prabhu 2008 <sup>400</sup>	Insufficient information on methodology of the study

Study	Exclusion reason
Puljak 2017 <sup>401</sup>	Systematic review is not relevant to review question or unclear PICO (Cochrane review, includes only one type of non-steroidal anti-inflammatory drugs and compares it to other types of non-steroidal anti-inflammatory drugs, uses different outcomes)
Qiu 2005 <sup>402</sup>	Not available in English language
Quiding 1992 <sup>403</sup>	Insufficient follow up (<1 week)
Ran 2018 <sup>404</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Rasmussen 2018 <sup>405</sup>	Commentary only
Rau 1989 <sup>406</sup>	Not available in English language
Rau 1989 <sup>407</sup>	Not available in English language
Rauschkolb 2009408	Abstract only
Reginster 2001 <sup>409</sup>	No usable outcomes (reported adverse events that could not be categorised into the protocol adverse events outcomes without making the number of participants who had any events in that category unclear)
Reginster 2007 <sup>410</sup>	Incorrect study design (pooled analysis of two RCTs but has an open phase extension period where people taking placebo were randomised again into the non-steroidal anti-inflammatory drugs groups)
Reicin 2002 <sup>411</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom)
Renda 2006 <sup>412</sup>	No relevant outcomes (no standard deviation reported and no way to calculate this from the information available)
Richette 2015 <sup>413</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Riera 2017 <sup>414</sup>	Protocol only
Ripa 2012 <sup>416</sup>	Incorrect interventions (includes a strong opioid and paracetamol compared to a transdermal opioid)
Risser 2013 <sup>417</sup>	Post-hoc analysis (secondary analysis of other trials)
Rodriguez-merchan 2016 <sup>418</sup>	Incorrect study design (review of systematic reviews)
Rose 1991 <sup>419</sup>	Not available in English language
Rosenthal 2004 <sup>420</sup>	Inappropriate comparison (included tramadol and paracetamol compared to paracetamol and placebo)
Ross 2008 <sup>421</sup>	Report only
Roth 1995 <sup>422</sup>	No relevant outcomes (does not include patient validated measures for pain agreed for use in this guideline)
Roth 1998 <sup>423</sup>	Inappropriate comparison (compares strong opioids and non- steroidal anti-inflammatory drugs to non-steroidal anti-inflammatory drugs and placebo)
Roth 2000 <sup>424</sup>	Incorrect stratum (includes people with osteoarthritis of the spine or back)
Roth 2012 <sup>425</sup>	Post-hoc subgroup analysis of original trial
Rothacker 1994 <sup>426</sup>	No relevant outcomes (reported adverse events that could not be categorised into the protocol adverse events outcomes without making the number of participants who had any events in that category unclear)
Rothacker 1998 <sup>427</sup>	No useable outcomes (no standard deviation reported and no way to calculate this from the information available)
Rovetta 2001 <sup>428</sup>	Not available in English language

Study	Exclusion reason
Runhaar 2016 <sup>430</sup>	Not review population (people without osteoarthritis)
Runhaar 2017 <sup>431</sup>	Systematic review is not relevant to review question or unclear PICO (subgroup analysis of a set of trials)
Runkel 1999 <sup>432</sup>	Commentary only
Ruschitzka 2017 <sup>433</sup>	Inappropriate comparison (compares multiple non-steroidal anti-inflammatory drugs)
Saag 2000 <sup>434</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom)
Saggioro 1991 <sup>435</sup>	Not review population (included people with rheumatoid arthritis)
Salmon 2018 <sup>436</sup>	Incorrect interventions (included intraarticular hyaluronic acid and disease modifying osteoarthritis drugs)
Saltzman 2017 <sup>437</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Salzman 1983 <sup>438</sup>	Incorrect interventions (included dextropropoxyphene and suprofen which are not licensed for use in the United Kingdom)
Sanders 2015 <sup>439</sup>	No relevant outcomes (no standard deviation reported and no way to calculate this from the information available)
Santos 2015 <sup>440</sup>	Systematic review is not relevant to review question or unclear PICO (Cochrane Review, population included people without osteoarthritis)
Sardana 2017 <sup>441</sup>	Systematic review; references checked (quality assessment inadequate)
Sarzi-puttini 2014 <sup>442</sup>	Systematic review is not relevant to review question or unclear PICO (wrong comparison, comparing different types of non-steroidal anti-inflammatory drugs)
Scheiman 2006 <sup>444</sup>	People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis and malignancy)
Schiff 2004 <sup>445</sup>	Post-hoc analysis (pooled analysis of 2 RCTs)
Schimke 1990 <sup>446</sup>	Abstract only
Schneider 1990 <sup>447</sup>	Inappropriate comparison (compares different types of non- steroidal anti-inflammatory drugs)
Schnitzer 1995 <sup>448</sup>	No usable outcomes (reported adverse events that could not be categorised into the protocol adverse events outcomes without making the number of participants who had any events in that category unclear)
Schnitzer 1995 <sup>452</sup>	Inappropriate comparison (compares different types of non- steroidal anti-inflammatory drugs)
Schnitzer 1999 <sup>450</sup>	Inappropriate comparison (compares strong opioids and non- steroidal anti-inflammatory drugs to strong opioids and placebo)
Schnitzer 2004 <sup>449</sup>	Incorrect interventions (compared different types of non-steroidal anti-inflammatory drugs)
Schnitzer 2009 <sup>453</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom)
Schnitzer 2012 <sup>451</sup>	Incorrect interventions (included zucapsaicin which is not licensed for use in the United Kingdom)
Seideman 1993 <sup>456</sup>	Inappropriate comparison (compares non-steroidal anti- inflammatory drugs and paracetamol to non-steroidal anti- inflammatory drugs alone)

Selvan 2012 <sup>457</sup>	Inappropriate comparison (compares glucosamine and non-
	,,,,
	steroidal anti-inflammatory drugs to glucosamine alone)
Shackel 1997 <sup>458</sup>	Incorrect interventions (included copper salicylate gel which is not licensed for use in the United Kingdom)
Shah 2001 <sup>459</sup>	Inappropriate comparison (compared non-licensed medicines with non-steroidal anti-inflammatory drugs)
Shahine 2014 <sup>460</sup>	Inappropriate comparison (compares glucosamine and ibuprofen with ibuprofen alone)
Shand 1986 <sup>461</sup>	Systematic review; references checked (inadequate quality assessment)
Shannon 2005 <sup>583</sup>	Abstract only
Shen 2006 <sup>463</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in osteoarthritis)
Shewale 2017 <sup>464</sup>	Incorrect study design. Incorrect interventions (intra-articular injections only)
Shimojo 1999 <sup>465</sup>	Not available in English language
Shinde 2017 <sup>466</sup>	Unclear population (chronic musculoskeletal pain)
Shuan 2002 <sup>467</sup>	Not available in English language
Silverfield 2002 <sup>468</sup>	Not guideline condition (other pain conditions). Not review population. Inappropriate comparison (compared strong opioids and paracetamol to placebo)
Singh 2006 <sup>469</sup>	Inappropriate comparison (compared different types of non- steroidal anti-inflammatory drugs)
Singh 2012 <sup>470</sup>	Incorrect interventions (included diacerein which is not licensed for use in the United Kingdom)
Skljarevski 2010 <sup>471</sup>	Not review population (chronic low back pain)
Skljarevski 2010 <sup>472</sup>	Abstract only
Smith 2016 <sup>474</sup>	Systematic review; references checked (inadequate quality assessment)
Smith 2018 <sup>473</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Solomon 1974 <sup>475</sup>	No usable outcomes (no standard deviation reported and no way to calculate this from the information available)
Song 2016 <sup>476</sup>	Systematic review; references checked (inadequate quality assessment)
Song 2016 <sup>477</sup>	Systematic review is not relevant to review question or unclear PICO (included moxibustion which is not included in the protocol)
Sowers 2003 <sup>478</sup>	Abstract only
Sowers 2005 <sup>479</sup>	Inappropriate comparison (compares different types of non- steroidal anti-inflammatory drugs)
Stengaard-pedersen 2004 <sup>481</sup>	Inappropriate comparison (compares different doses of an non- steroidal anti-inflammatory drugs)
Stewart 2018 <sup>482</sup>	Incorrect interventions (included glucosamine and exercise therapy which is not included in the protocol)
Strand 2011 <sup>484</sup>	Inappropriate comparison (compares different regimens of an non- steroidal anti-inflammatory drugs)
Strand 2015 <sup>483</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Stricker 2008 <sup>485</sup>	Incorrect interventions (included rofecoxib and lumiracoxib which is not licensed for use in the United Kingdom)

Study	Exclusion reason
Suarez-otero 2002 <sup>486</sup>	Incorrect interventions (compared an non-steroidal anti- inflammatory drugs and bile acid sequestrant to another non- steroidal anti-inflammatory drugs)
Sullivan 2009 <sup>487</sup>	Incorrect study design (non-randomised)
Sullivan 2009 <sup>488</sup>	Incorrect study design (non-randomised)
Sun, 2020 <sup>489</sup>	Wrong comparison (glucosamine plus non-steroidal anti- inflammatory drugs versus non-steroidal anti-inflammatory drugs only)
Svensson 2006 <sup>490</sup>	Secondary analysis only
Tascioglu 2004 <sup>492</sup>	Not available in English language
Thie 2001 <sup>494</sup>	Dose of glucosamine is below the licensed dose (1178 mg/day)
Tian 2018 <sup>495</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Tindall 2002 <sup>496</sup>	Inappropriate comparison (compared drug response for people with hip and knee osteoarthritis and rheumatoid arthritis)
Toupin 2019 <sup>498</sup>	Cochrane review - Wrong intervention (includes tramadol combined with paracetamol or non-steroidal anti-inflammatory drugs), different outcomes, different hierarchy of outcomes
Tosun 2010 <sup>497</sup>	Incorrect interventions (included transdermal non-steroidal anti- inflammatory drugs which are not included in the protocol)
Towheed 2005 <sup>499</sup>	Systematic review is not relevant to review question or unclear PICO (Cochrane review, included different doses of glucosamine)
Towheed 2006 <sup>500</sup>	Systematic review is not relevant to review question or unclear PICO (Cochrane review, included spinal osteoarthritis)
Trc 2011 <sup>501</sup>	Incorrect interventions (included enzymatic hydrolysed collagen which was not included in the protocol)
Trellu 2015 <sup>502</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Trueba davalillo 2015 <sup>503</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Tucker 2003 <sup>504</sup>	Inappropriate comparison (compared an non-steroidal anti- inflammatory drugs to manual therapy)
Tuzun 1995 <sup>505</sup>	Not available in English language
Usha 2004 <sup>507</sup>	Inappropriate comparison (included methylsulfonamide and glucosamine compared to glucosamine alone and sulphonamidenamide alone)
Vajranetra 1984 <sup>508</sup>	Incorrect study design
Valtonen 1981 <sup>509</sup>	Incorrect interventions (included diazepam and non-steroidal anti- inflammatory drugs which was not included in the protocol)
Van akkeren 1991 <sup>510</sup>	Not available in English language
Van den driest 2017 <sup>511</sup>	Protocol only
Van haselen 2000 <sup>512</sup>	Incorrect interventions (included topical homeopathic agents)
Van middelkoop 2013 <sup>514</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Van middelkoop 2016 <sup>513</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Vannabouathong 2018 <sup>515</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Varadi 2013 <sup>516</sup>	Incorrect interventions (included transdermal non-steroidal anti- inflammatory drugs which were not included in the protocol)

Study	Exclusion reason
Vlok 1987 <sup>517</sup>	Inappropriate comparison (compared weak opioids, non-steroidal anti-inflammatory drugs and paracetamol to non-steroidal anti-inflammatory drugs alone)
Vorsanger 2008 <sup>519</sup>	Not guideline condition (other pain conditions). Not review population
Vorsanger 2010 <sup>518</sup>	Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated). Inappropriate comparison (compared two strong opioids)
Waikakul 1997 <sup>520</sup>	Inappropriate comparison (compared two non-steroidal anti-inflammatory drugs)
Wallace 1994 <sup>521</sup>	Inappropriate comparison (compared non-steroidal anti- inflammatory drugs and weak opioids to non-steroidal anti- inflammatory drugs alone)
Wang 2015 <sup>524</sup>	Systematic review is not relevant to review question or unclear PICO (included intra-articular agents)
Wang 2015 <sup>522</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Wang 2018 <sup>523</sup>	Protocol only
Wangroongsub 2010 <sup>525</sup>	Inappropriate comparison (compares two different glucosamine formulations)
Watson 2000 <sup>528</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom)
Watson 2001 <sup>527</sup>	No usable outcomes (does not report outcomes included in the protocol)
Watson 2004 <sup>529</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom). People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis and malignancy)
Watson 2004 <sup>526</sup>	Systematic review; references checked (inadequate quality assessment)
Weaver 1995 <sup>530</sup>	No usable outcomes (reported adverse events that could not be categorised into the protocol adverse events outcomes without making the number of participants who had any events in that category unclear)
Weaver 2006 <sup>531</sup>	Incorrect interventions (included rofecoxib which is not licensed for use in the United Kingdom)
Wegman 2003 <sup>532</sup>	No usable outcomes (no validated scales reported for outcomes included in the protocol)
Wei 1995 <sup>533</sup>	Not available in English language
Wein 1998 <sup>534</sup>	Abstract only
Welsch, 2020 <sup>535</sup>	Systematic review, references checked (insufficient quality assessment)
Whelton 2001 <sup>537</sup>	Inappropriate comparison (compared two non-steroidal anti-inflammatory drugs)
Whelton 2002 <sup>536</sup>	Inappropriate comparison (compared two non-steroidal anti-inflammatory drugs)
White 2004 <sup>538</sup>	Not review population (included people with rheumatoid arthritis)

Study	Exclusion reason
Widrig 2007 <sup>539</sup>	Incorrect interventions (included arnica which is not included in the protocol)
Wild 2010 <sup>540</sup>	Unclear population (for example, the proportion of participants with an osteoarthritis diagnosis not stated). Inappropriate comparison (compared two strong opioids)
Wilder-smith 2001 <sup>541</sup>	Inappropriate comparison (compare non-steroidal anti-inflammatory drugs and strong opioids with non-steroidal anti-inflammatory drugs and weak opioids)
Wilkens 2010 <sup>542</sup>	Incorrect stratum (low back pain and spinal osteoarthritis)
Williams 1983 <sup>543</sup>	Incorrect interventions (included benoxaprofen which is not licensed for use in the United Kingdom)
Williamson 2014 <sup>544</sup>	Post-hoc analysis (analysis of a previous study of people with osteoarthritis knee pain and chronic low back pain)
Wise 2010 <sup>545</sup>	Abstract only
Witteveen 2015 <sup>546</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Wluka 2021 <sup>547</sup>	Protocol only
Woitzek 2012 <sup>548</sup>	Not available in English language
Wojtulewski 1974 <sup>549</sup>	Incorrect interventions (included fenoprofen and phenylbutazone which are not licensed for use in the United Kingdom)
Wolff 2021 <sup>550</sup>	Systematic review; references checked
Woolf 1978 <sup>551</sup>	Inappropriate comparison (compared two non-steroidal anti-inflammatory drugs)
Wu 2017 <sup>552</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Xiao 2020 <sup>553</sup>	Narrative review only
Xing 2017 <sup>554</sup>	Incorrect interventions (included intra-articular pharmacological agents, which are considered in a different review question)
Xu 2016 <sup>555</sup>	Systematic review; references checked (inadequate quality assessment)
Yaligod 2014 <sup>556</sup>	Inappropriate comparison (compared different formulations of paracetamol)
Yamamoto 1979 <sup>557</sup>	Not available in English language
Yataba 2017 <sup>559</sup>	Incorrect interventions (included transdermal non-steroidal anti- inflammatory drugs which are not included in the protocol)
Yataba 2017 <sup>558</sup>	Incorrect interventions (included transdermal non-steroidal anti- inflammatory drugs which are not included in the protocol)
Yelland 2007 <sup>560</sup>	Incorrect stratum (included people with spinal osteoarthritis)
Yeomans 2018 <sup>561</sup>	Inappropriate comparison (compared multiple non-steroidal anti-inflammatory drugs)
Yocum 2001 <sup>562</sup>	Abstract only
Yoo 2014 <sup>563</sup>	Inappropriate comparison (compared two non-steroidal anti-inflammatory drugs)
Yoon 2017 <sup>564</sup>	Not review population (multiple pain conditions)
Yu 2018 <sup>565</sup>	Inappropriate comparison (compared two non-steroidal anti- inflammatory drugs when both arms were given intra-articular injections)
Yue 2018 <sup>566</sup>	Insufficient duration of treatment (<1 week)
Yuenyongviwat 2019 <sup>567</sup>	Inappropriate comparison (glucosamine compared to usual care)

Study	Exclusion reason
Zacher 2001 <sup>568</sup>	Not available in English language
Zacher 2003 <sup>569</sup>	Post-hoc analysis
Zammit 2010 <sup>570</sup>	Systematic review is not relevant to review question or unclear PICO (Cochrane review; included a range of different interventions for toe osteoarthritis that were not relevant to this review)
Zeng 2015 <sup>571</sup>	Systematic review; references checked (inadequate quality assessment)
Zeng 2015 <sup>572</sup>	Systematic review; references checked (inadequate quality assessment)
Zeng 2018 <sup>573</sup>	Systematic review; references checked (inadequate quality assessment)
Zhang 2007 <sup>576</sup>	Not available in English language
Zhang 2012 <sup>575</sup>	Not available in English language
Zhao 1999 <sup>579</sup>	No usable outcomes
Zhao 2016 <sup>578</sup>	Systematic review is not relevant to review question or unclear PICO (intra-articular injections)
Zhao 2019 <sup>577</sup>	Incorrect interventions (included loxoprofen which is not licensed for use in the United Kingdom)
Zheng 2006 <sup>580</sup>	Not available in English Language
Zhu 2018 <sup>581</sup>	Systematic review; references checked (inadequate quality assessment)
Zhu 2018 <sup>582</sup>	Systematic review; references checked (inadequate quality assessment)
Zoppi 1995 <sup>167</sup>	No usable outcomes (reported adverse events that could not be categorised into the protocol adverse events outcomes without making the number of participants who had any events in that category unclear)

#### **Health Economic studies**

Published health economic studies that met the inclusion criteria (relevant population, comparators, economic study design, published 2005 or later and not from non-OECD country or USA) but that were excluded following appraisal of applicability and methodological quality are listed below. See the health economic protocol for more details.

Table 27: Studies excluded from the health economic review

Reference	Reason for exclusion
Brereton 2014 <sup>65</sup>	This study was assessed as partially applicable (Swedish setting may not reflect current NHS context); however, given that a more applicable UK analysis <sup>298</sup> was available based on the same model this study was selectively excluded.
Bruyere 2009 <sup>76</sup>	Excluded as rated not applicable. The study intervention was not relevant to the review.
Bruyere 2021 <sup>73</sup>	Selectively excluded (Germany) as there are UK-based cost utility analyses included.
De Lossada 2014 <sup>122</sup>	Selectively excluded (Spain) as there are UK-based cost utility analyses included.
Leisewitz 2014 <sup>305</sup>	Selectively excluded (Chile) as there are UK-based cost utility analyses included.

Reference	Reason for exclusion
Maetzel 2003 <sup>329</sup>	Excluded as rated not applicable. Canadian resource use and costs from before 2005 judged unlikely to be applicable to current UK NHS context.
McKell 1994 <sup>343</sup>	Excluded as rated not applicable. UK resource use and costs from before 2005 judged unlikely to be applicable to current UK NHS context.
Peacock 1993 <sup>390</sup>	Excluded as rated not applicable. UK resource use and costs from before 2005 judged unlikely to be applicable to current UK NHS context.
Schaefer 2005 443	Excluded as rated not applicable. US perspective judged unlikely to be applicable to current UK NHS context.
Segal 2004 <sup>455</sup>	Excluded as rated not applicable. Australian resource use and costs from before 2005 judged unlikely to be applicable to current UK NHS context.
Spiegel 2003 <sup>480</sup>	Excluded as rated not applicable. US resource use and costs from before 2005 judged unlikely to be applicable to current UK NHS context.
Tavakoli 2003 493	Excluded as rated not applicable. UK resource use and costs from before 2005 judged unlikely to be applicable to current UK NHS context.

# Appendix J - Research recommendations - full details

#### J.1.1 Research recommendation

What is the clinical and cost-effectiveness of antiepileptics and antidepressants (other than duloxetine) for people with osteoarthritis?

### J.1.2 Why this is important

Antiepileptic drugs and antidepressants are used by people with osteoarthritis. However, the evidence for them was limited. Evidence for antiepileptic drugs was limited to two trials that had small sample sizes and so the effects were overall unclear. Evidence for antidepressants was mostly limited to duloxetine, which would not be the antidepressant drug of choice used by most people in the United Kingdom. Therefore, in order to support their continued use, further research is required to ensure their efficacy is present and to understand the potential harms from their use.

#### J.1.3 Rationale for research recommendation

Importance to 'patients' or the population	Antiepileptic drugs and antidepressants are drugs that aim to reduce pain in a different method to the other oral medicines investigated in this review, meaning that they could be more effective for some people with osteoarthritis. Antidepressants if used at a higher dose may help manage symptoms of depression, which may reduce pain experienced. However, the doses commonly used for managing pain alone are generally too low to reach this effect.
Relevance to NICE guidance	There was insufficient evidence in this guideline to produce recommendations supporting the use of these medicines. In general, there are very few effective treatments for osteoarthritis that have been identified in this guideline. Therefore, further work that could show the people in whom treatments are effective would be of great benefit. Therefore, further research would allow future work to be clearer regarding their use.
Relevance to the NHS	The use of these medicines, while the cost is variable (and these drugs are generally generic and so should not be particularly expensive), may have an important cost implication for the NHS. Therefore, a further understanding of their cost-effectiveness may be important to allow decision making regarding their use to be considered in the future.
National priorities	This is not a national priority area.
Current evidence base	Currently there is very limited evidence with small sample sizes for the use of antiepileptic drugs. There is a significant number of studies investigating the use of duloxetine in the short term. However, there is limited information investigating the use of other antidepressants that may be used more commonly in the United Kingdom, such as amitriptyline.

Equality considerations	Research should consider older people in the trials (including people above the age of 75 years) to better reflect the population of people with osteoarthritis. People with comorbidities should also be considered to better reflect the population of people with osteoarthritis.
	The committee noted that the research identified in this review does not appear to represent the diverse population of people with osteoarthritis. They agreed that any further research should be representative of the population, including people from different family backgrounds, and socioeconomic backgrounds, disabled people, and people of different ages and genders. Future work should be done to consider the different experiences of people from diverse communities to ensure that the approach taken can be made equitable for everyone.

# J.1.4 Modified PICO table

Population	Inclusion:
	<ul> <li>Adults (age ≥16 years) with osteoarthritis affecting any joint</li> </ul>
	Exclusion:
	• Children (age <16 years)
	<ul> <li>People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis, and malignancy).</li> <li>Studies with an unclear population (e,g, proportion of participants with osteoarthritis unclear)</li> </ul>
Intervention	<ul> <li>Spinal osteoarthritis</li> <li>Antidepressants (including tricyclic</li> </ul>
intervention	antidepressants)
	Anti-epileptic drugs (including gabapentin and pregabalin)
Comparator	Placebo
Outcome	Stratify by ≤/>3 months (longest time-point in each):
	<ul> <li>Health-related quality of life [validated patient- reported outcomes, continuous data prioritised]</li> </ul>
	<ul> <li>Pain [validated patient-reported outcomes, continuous data prioritised]</li> </ul>
	<ul> <li>Physical function [validated patient-reported outcomes, continuous data prioritised]</li> </ul>

	<ul> <li>Psychological distress [validated patient-reported outcomes, continuous data prioritised]</li> <li>Osteoarthritis flares [dichotomous data]</li> <li>Serious adverse events 1A: Gastrointestinal (bleeding or perforation) adverse events</li> <li>Serious adverse events 1B: Gastrointestinal (non-bleeding or perforation) adverse events</li> <li>Serious adverse events 2: Cardiovascular adverse events</li> <li>Serious adverse events 3: Hepatorenal adverse events</li> <li>Serious adverse events 4: Central nervous system adverse events</li> </ul>
Study design	Randomised control trial
Timeframe	Long term (at least 1 year)
Additional information	Adequately powered high quality randomised controlled trials  Trials with sufficient blinding, adequate randomisation methods and allocation concealment.  Subgroup analyses:  Presence of multimorbidity (high versus low morbidity score)  Age (≤/> 75 years)  Site of osteoarthritis  Hip  Knee  Ankle  Foot  Toe  Shoulder  Elbow  Wrist  Hand  Thumb  Finger  Temporomandibular joint (TMJ)  Multisite

# J.2 Research recommendation

What is the clinical and cost-effectiveness of weak opioids for people with osteoarthritis?

# J.2.1 Why this is important

Weak opioids are used for people with osteoarthritis and may be a more used treatment strategy for people who cannot tolerate non-steroidal anti-inflammatory drugs (especially in older people). However, the evidence for them was limited to one small trial making the effects unclear. Therefore, in order to support their continued use, further research is

required to ensure their efficacy is present and to understand the potential harms from their use.

# J.2.2 Rationale for research recommendation

Importance to 'patients' or the population	Weak opioids are widely used to manage osteoarthritis symptoms and other conditions causing pain and so being able to understand their beneficial effects balanced against the potential harms would be important. They may be used by people who are not able to tolerate other treatments, such as non-steroidal anti-inflammatory drugs.
Relevance to NICE guidance	There was insufficient evidence in this guideline to produce recommendations supporting the use of these medicines. Given that the recommended pharmacological treatments for this guideline are topical treatments that may not penetrate the joint in all cases, non-steroidal anti-inflammatory drugs, which may not be tolerable for all people due to potential gastrointestinal, cardiovascular and hepatorenal adverse effects and transdermal opioids which could also have increased adverse effects and are not suitable to all, weak opioids may be used as an alternative treatment by prescribers as a strong recommendation could not be made regarding their use based on limited evidence. In general, there are very few effective treatments for osteoarthritis that have been identified in this guideline. Therefore, further work that could show the people in whom treatments are effective would be of great benefit.
Relevance to the NHS	Although the cost of prescribing weak opioids is likely inexpensive, the widespread use of these medicines may have an important cost implication for the NHS (directly or through the management of concurrent adverse events, such as constipation). Therefore, a further understanding of their cost-effectiveness may be important to allow decision making regarding their use to be considered in the future.
National priorities	Reducing opioid usage is a national priority area (NHS National Patient Safety Improvement Programmes).
Current evidence base	Currently there is very limited evidence with small sample sizes for the use of weak opioids. Designing studies is difficult for this population, as you are unlikely to find a drug naïve population that has not received weak opioids previously.
Equality considerations	Research should consider older people in the trials (including people above the age of 75 years) to better reflect the population of people with osteoarthritis. This is particularly important for this question as older people may not be able to take oral non-steroidal anti-inflammatory drugs and so low opioids may be used more readily. People with comorbidities should also be

considered to better reflect the population of people with osteoarthritis.

The committee noted that the research identified in this review does not appear to represent the diverse population of people with osteoarthritis. They agreed that any further research should be representative of the population, including people from different family backgrounds, and socioeconomic backgrounds, disabled people, and people of different ages and genders. Future work should be done to consider the different experiences of people from diverse communities to ensure that the approach taken can be made equitable for everyone.

### J.2.3 Modified PICO table

Population	Inclusion:  • Adults (age ≥16 years) with osteoarthritis
	affecting any joint
	Exclusion:
	<ul> <li>Children (age &lt;16 years)</li> <li>People with conditions that may make them</li> </ul>
	susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis, and malignancy).
	<ul> <li>Studies with an unclear population (e,g, proportion of participants with osteoarthritis unclear)</li> </ul>
	Spinal osteoarthritis
Intervention	Weak opioids (including codeine and dihydrocodeine)
Comparator	Placebo
Outcome	Stratify by ≤/>3 months (longest time-point in each):
	<ul> <li>Health-related quality of life [validated patient- reported outcomes, continuous data prioritised]</li> </ul>
	<ul> <li>Pain [validated patient-reported outcomes, continuous data prioritised]</li> </ul>
	<ul> <li>Physical function [validated patient-reported outcomes, continuous data prioritised]</li> </ul>
	<ul> <li>Psychological distress [validated patient- reported outcomes, continuous data prioritised]</li> </ul>
	Osteoarthritis flares [dichotomous data]
	<ul> <li>Serious adverse events 1A: Gastrointestinal (bleeding or perforation) adverse events</li> </ul>

	<ul> <li>Serious adverse events 1B: Gastrointestinal (non-bleeding or perforation) adverse events</li> <li>Serious adverse events 2: Cardiovascular adverse events</li> <li>Serious adverse events 3: Hepatorenal adverse events</li> <li>Serious adverse events 4: Central nervous system adverse events</li> </ul>
Study design	Randomised control trial
Timeframe	Long term (at least 1 year)
Additional information	Adequately powered high quality randomised controlled trials  Trials with sufficient blinding, adequate randomisation methods and allocation concealment.  Subgroup analyses:  Presence of multimorbidity (high versus low morbidity score)  Age (≤/> 75 years)  Site of osteoarthritis  Hip  Knee  Ankle  Foot  Toe  Shoulder  Elbow  Wrist  Hand  Thumb  Finger  Temporomandibular joint (TMJ)  Multisite

# J.3 Research recommendation

What is the clinical and cost-effectiveness of topical local anaesthetics for people with osteoarthritis?

# J.3.1 Why this is important

Topical local anaesthetics are a potential therapy for osteoarthritis that may be used for people who cannot tolerate other medicines (such as non-steroidal anti-inflammatory drugs and opioids). However, no studies were identified in this review investigating the efficacy of the treatment. Given this, further research is required to ensure that this is a safe and effective treatment for people with osteoarthritis.

# J.3.2 Rationale for research recommendation

Nationale for research recommendation	
Importance to 'patients' or the population	Topical local anaesthetics are a possible treatment for people who cannot tolerate other treatments that could provide benefit. However, their efficacy for osteoarthritis is not understood and so further research to give information about this would be beneficial. As topical treatments are generally well tolerated then this may be a welcome option if effective.
Relevance to NICE guidance	There was no evidence for this medicine identified in this review which meant that no recommendations could be made discussing it. Therefore, further research would allow future guidance to make a recommendation regarding this medicine.
Relevance to the NHS	Local anaesthetic patches could lead have a significant cost and so additional information about the effectiveness, including cost-effectiveness, would be important to inform their use in the NHS.
National priorities	This is not a national priority area.
Current evidence base	Currently there is no evidence identified in this guideline regarding the use of local anaesthetic patches for people with osteoarthritis. Therefore, new research would allow this medicine to be investigated.
Equality considerations	Research should consider older people in the trials (including people above the age of 75 years) to better reflect the population of people with osteoarthritis. People with comorbidities should also be considered to better reflect the population of people with osteoarthritis. This therapy would likely to be used by people who cannot tolerate or have contraindications for non-steroidal anti-inflammatory drugs and so involving these two groups would be important.  The committee noted that the research identified in this review does not appear to represent the diverse population of people with osteoarthritis. They agreed that any further research should be representative of the population, including people from different family backgrounds, and socioeconomic backgrounds, disabled people, and people of different ages and genders. Future work should be done to consider the different experiences of people from diverse communities to ensure that the approach taken can be made equitable for everyone.

# J.3.3 Modified PICO table

	<ul> <li>Adults (age ≥16 years) with osteoarthritis affecting any joint</li> </ul>
	Exclusion:
	• Children (age <16 years)
	People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis, and malignancy).
	<ul> <li>Studies with an unclear population (e,g, proportion of participants with osteoarthritis unclear)</li> </ul>
	Spinal osteoarthritis
Intervention	Topical local anaesthetic patches
Comparator	Placebo
Outcome	Stratify by ≤/>3 months (longest time-point in each):

# J.4 Research recommendation

What is the clinical and cost effectiveness of topical non-steroidal anti-inflammatory drugs and topical capsaicin for osteoarthritis affected joints other than the knee?

### J.4.1 Why this is important

Topical non-steroidal anti-inflammatory drugs were found to be clinically and cost-effective and safe treatments for people with knee osteoarthritis. However, there was limited evidence identified for people with hand osteoarthritis and no evidence for other joints affected by osteoarthritis. It is unclear about whether local topical medicines would be effective for joints that are deeper under the skin (for example: the hip). The committee made a recommendation to consider using topical non-steroidal anti-inflammatory drugs for non-knee joint sites. Further research to ensure their efficacy would be required before making strong recommendations. Meanwhile, there was very limited evidence supporting the efficacy of topical capsaicin. Therefore, further research is required to show the effect of topical capsaicin.

#### J.4.2 Rationale for research recommendation

Importance to 'patients' or the population	Topical non-steroidal anti-inflammatory drugs have been shown to be effective and safe for people with knee osteoarthritis. Limited evidence has indicated possible benefits of topical capsaicin for people with knee and hand osteoarthritis. The safety of the preparations makes them preferable to oral non-steroidal anti-inflammatory drugs. Given then, if evidence indicates that they are effective for joint sites where they have been believed to be ineffective, then this could provide better support for people with osteoarthritis.
Relevance to NICE guidance	In this guideline, topical non-steroidal anti- inflammatory drugs were recommended to be offered for people with knee osteoarthritis, while only to be considered for other joint sites due to a lack of evidence. Topical capsaicin was only

	recommended to be considered due to a limited amount of evidence investigating its use. If additional research is conducted then this will allow stronger recommendations to be made in the future.
Relevance to the NHS	Topical non-steroidal anti-inflammatory drugs have been shown to be the most cost-effective medicine out of those included in the economic model for this question. Given this, there could be additional savings if topical non-steroidal anti-inflammatory drugs are as effective for other joint sites as people will be able to receive this treatment over others where there may be safety concerns. However, they may be more expensive treatments than oral formulations and so their efficacy for other joint sites must be confirmed to be certain of this. There is no cost-effectiveness evidence for topical capsaicin. Therefore, gaining an understanding of their cost-effectiveness would be important to ensure that they are appropriate for use in the NHS.
National priorities	This is not a national priority area.
Current evidence base	Evidence for topical non-steroidal anti-inflammatory drugs for the knee have shown the medicine to be clinically and cost-effective in the short term (≤3 months). Currently there is no evidence regarding the use of topical non-steroidal anti-inflammatory drugs for joint sites other than the knee. There is limited evidence for the effectiveness of topical capsaicin for the knee and hand. Therefore, additional evidence for this intervention would be important.
Equality considerations	Research should consider older people in the trials (including people above the age of 75 years) to better reflect the population of people with osteoarthritis. People with comorbidities should also be considered to better reflect the population of people with osteoarthritis.  The committee noted that the research identified in this review does not appear to represent the diverse population of people with osteoarthritis. They agreed that any further research should be representative of the population, including people from different family backgrounds, and socioeconomic backgrounds, disabled people, and people of different ages and genders. Future work should be done to consider the different experiences of people from diverse communities to ensure that the approach taken can be made equitable for everyone.

# J.4.3 Modified PICO table

Population	Inclusion:
	<ul> <li>Adults (age ≥16 years) with osteoarthritis affecting any joint (apart from people where</li> </ul>

	the joint they have the most symptoms from are the knee joints)
	Exclusion:
	• Children (age <16 years)
	<ul> <li>People with conditions that may make them susceptible to osteoarthritis or often occur alongside osteoarthritis (including: crystal arthritis, inflammatory arthritis, septic arthritis, hemochromatosis, haemophilic arthropathy, diseases of childhood that may predispose to osteoarthritis, and malignancy).</li> <li>Studies with an unclear population (e,g, proportion of participants with osteoarthritis unclear)</li> <li>Spinal osteoarthritis</li> </ul>
	Knee osteoarthritis
Intervention	Topical non-steroidal anti-inflammatory drugs Topical capsaicin
Comparator	Placebo
