

Guideline version (for example, Draft, Consultation, Final)

## Thyroid Cancer

**NICE guideline: search strategies**

*NICE guideline NG196*

*Search strategies*

*April 2022*

*Draft for Consultation*

*This guideline was developed by the  
National Guideline Centre*

## **Disclaimer**

The recommendations in this guideline represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, professionals are expected to take this guideline fully into account, alongside the individual needs, preferences and values of their patients or service users. The recommendations in this guideline are not mandatory and the guideline does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and, where appropriate, their carer or guardian.

Local commissioners and providers have a responsibility to enable the guideline to be applied when individual health professionals and their patients or service users wish to use it. They should do so in the context of local and national priorities for funding and developing services, and in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities. Nothing in this guideline should be interpreted in a way that would be inconsistent with compliance with those duties.

NICE guidelines cover health and care in England. Decisions on how they apply in other UK countries are made by ministers in the [Welsh Government](#), [Scottish Government](#), and [Northern Ireland Executive](#). All NICE guidance is subject to regular review and may be updated or withdrawn.

## **Appendix A:**

# **Thyroid Cancer search strategies**

# 1 Clinical literature search strategies

The literature searches for these reviews are detailed below and complied with the methodology outlined in Developing NICE guidelines: the manual, 2014 (updated 2020) <https://www.nice.org.uk/process/pmg20/chapter/identifying-the-evidence-literature-searching-and-evidence-submission>.

For more information, please see the Methodology review published as part of the accompanying documents for this guideline.

## 1.1 1.1 & 1.4 Ultrasound (A)

This literature search strategy was used for the following review:

- What is the diagnostic accuracy of ultrasound for identifying thyroid nodule malignancies or nodules with malignant potential?

### 1.1.1 1.1 Ultrasound (A)

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

**Table 1: Database parameters, filters and limits applied**

Database	Dates searched	Search filters and limits applied
Medline (OVID)	1946 – 10 December 2021	Diagnostic studies
		Exclusions (animal studies, letters, comments, editorials, case studies/reports, children)
		English language
Embase (OVID)	1974 – 10 December 2021	Diagnostic studies
		Exclusions (animal studies, letters, comments, editorials, case studies/reports, conference abstracts, children)
		English language
The Cochrane Library (Wiley)	Cochrane Database of Systematic Reviews to Issue 12 of 12, December 2021	Exclusions (clinical trials, conference abstracts)
		Review type: Diagnostic

### 1.1.2 1.4 Ultrasound Accuracy (A)

This literature search strategy was used for the following review:

- In people with thyroid nodules on ultrasound at initial presentation, for what size and classification is it clinically and cost effective to use active surveillance or discharge rather than biopsy?

This literature search strategy was used for the following review:

- What is the diagnostic accuracy of ultrasound for identifying thyroid nodule malignancies or nodules with malignant potential?

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

## 1.3 Radioisotope (C)

This literature search strategy was used for the following review:

- What is the clinical and cost effectiveness of radioisotope scans for people with suspected thyroid cancer?

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

**Table 4: Database parameters, filters and limits applied**

<b>Database</b>	<b>Dates searched</b>	<b>Search filters and limits applied</b>

## 1.4 1.5 FNAC (D,E)

This literature search strategy was used for the following reviews:

- For people with thyroid nodules that require further investigation following ultrasound, what is the diagnostic accuracy of FNAC with rapid on-site assessment, FNAC without rapid on-site assessment or core biopsy for diagnosing thyroid cancer?
- For people with fine-needle aspiration samples showing benign cytology or non-diagnostic features but with US / clinical findings indicative of increased risk of malignancy, is it clinically and cost effective to use diagnostic hemithyroidectomy, repeat FNAC, use active surveillance or discharge?

Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

## 1.5 1.7 Molecular Testing (F)

This literature search strategy was used for the following review:

- For people who have had fine-needle aspiration samples, where the FNAC sample was adequate but was not able to differentiate between benign and malignant samples, what is the clinical and cost effectiveness of molecular testing to diagnose or rule out thyroid cancer?

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

## 1.6 1.8 Imaging (G)

This literature search strategy was used for the following review:

- What are the indications for using CT (with or without contrast), MRI, PET or bone scans for further staging?

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

## 1.7 2.1 Initial Treatment (H)

This literature search strategy was used for the following review:

- For people with differentiated thyroid cancer, what is the clinical and cost effectiveness of active surveillance, hemi-thyroidectomy (with or without prophylactic or therapeutic node dissection) or total thyroidectomy (with or without prophylactic or therapeutic node dissection)?

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are

rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

## 1.8 3.1, 3.1c & 3.2 Radioactive Iodine (I,J,K)

This literature search strategy was used for the following reviews:

- What is the clinical and cost effectiveness of radioactive iodine with thyrotropin alfa versus radioactive iodine with withdrawal of thyroid hormone replacement?
- What is the clinical and cost effectiveness of radioactive iodine (RAI) ablation/treatment versus no RAI ablation/treatment in different population groups, characterised by stage, type of differentiated cancer, existence of vascular infiltration and gender?
- What is the most clinically and cost-effective administered activity for people receiving radioactive iodine after thyroidectomy?

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

## 1.9 3.3 External Beam (L)

This literature search strategy was used for the following review:

- For people with residual, metastatic or recurrent thyroid cancer, what is the clinical and cost effectiveness of external beam radiotherapy?

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

## 1.10 3.4a & 3.4b Thyroid stimulating hormone (M,N)

This literature search strategy was used for the following reviews:

- What is the clinical and cost effectiveness of TSH suppression versus no TSH suppression in different population groups, characterised by recurrence risk, ethnicity, gender and age?

- For people who have had thyroidectomy and radioactive iodine treatment for differentiated thyroid cancer, what is the most clinically and cost-effective length of treatment with drugs (such as levothyroxine) to suppress TSH to subnormal levels?

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

## 1.11 4.1 & 4.2 Measuring Thyroglobulin (O,P)

This literature search strategy was used for the following reviews:

- For people who have had thyroidectomy and radioactive iodine for differentiated thyroid cancer, what is the clinical and cost effectiveness of measuring thyroglobulin and thyroglobulin antibodies (with or without radioisotope scans) to assess residual or recurrent disease?
- For people who have had treatment for differentiated thyroid cancer, what is the clinical and cost effectiveness of using stimulated thyroglobulin or highly sensitive thyroglobulin assays, to re-assess risk of recurrence after initial treatment and to tailor their follow-up regimen?

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

## 1.12 4.3 Follow up (Q)

This literature search strategy was used for the following review:

- For people who have had treatment for differentiated thyroid cancer, what is the optimum frequency of follow-up according to the severity, spread of the disease and treatment given?

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

## 1.13 5.1 Information, education and support (R)

This literature search strategy was used for the following review:

- What information, education and support do people with suspected and confirmed thyroid cancer and their families and carers need?

Searches were constructed using a PICO framework where population (P) terms were combined with Intervention (I) and in some cases Comparison (C) terms. Outcomes (O) are rarely used in search strategies for interventions as these concepts may not be well described in title, abstract or indexes and therefore difficult to retrieve. Search filters were applied to the search where appropriate.

## 2 Health Economics literature search strategy

Health economic evidence was identified by conducting searches using terms for a broad Thyroid Cancer population. The following databases were searched: NHS Economic Evaluation Database (NHS EED - this ceased to be updated after 31<sup>st</sup> March 2015), Health Technology Assessment database (HTA - this ceased to be updated from 31<sup>st</sup> March 2018) and The International Network of Agencies for Health Technology Assessment (INAHTA). Searches for recent evidence were run on Medline and Embase from 2014 onwards for health economics, and all years for quality-of-life studies.

**Table 2: Database parameters, filters and limits applied**

Database	Dates searched	Search filters and limits applied
Medline (OVID)	Health Economics 1 January 2014 – 16 December 2021	Health economics studies Quality of life studies
	Quality of Life 1946 – 16 December 2021	Exclusions (animal studies, letters, comments, editorials, case studies/reports, conference abstracts)  English language
Embase (OVID)	Health Economics 1 January 2014 – 16 December 2021	Health economics studies Quality of life studies
	Quality of Life 1974 – 16 December 2021	Exclusions (animal studies, letters, comments, editorials, case studies/reports, conference abstracts)  English language
NHS Economic Evaluation Database (NHS EED) (Centre for Research and Dissemination - CRD)	Inception – 31 <sup>st</sup> March 2015	
Health Technology Assessment Database (HTA) (Centre for Research and Dissemination – CRD)	Inception – 31 <sup>st</sup> March 2018	
The International Network of Agencies for Health Technology Assessment (INAHTA)	Inception - 16 December 2021	English language
