

December 2024 exceptional surveillance of adrenal insufficiency: identification and management (NICE guideline NG243)

Surveillance report

Published: 18 December 2024

www.nice.org.uk

We propose to update this guideline to clarify that 5ml or 10 ml water for injection (1 vial) should be included with hydrocortisone sodium succinate 100 mg powder in the [section on emergency management kits](#) (recommendation 1.3.10).

The wording of the recommendation was changed in response to a comment received during consultation, but this was found to be in error.

Surveillance decision

Update this guideline to reflect these changes.
