

Draft for consultation

IV fluids in children

**Intravenous fluid therapy in children and young people
in hospital**

Appendices

May 2015

Draft

*Commissioned by the National Institute for
Health and Care Excellence*

Disclaimer

Healthcare professionals are expected to take NICE clinical guidelines fully into account when exercising their clinical judgement. However, the guidance does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of each patient, in consultation with the patient and/or their guardian or carer.

F.3.5.2	Training and education
Section F.4	Health economics searches
F.4.1	Health economic reviews
Section F.5	References

Search strategies used for the Intravenous fluids in children guideline are outlined below and were run in accordance with the methodology in the NICE guidelines manual 2012.¹ All searches were run up to **22 December 2014** unless otherwise stated. Any studies added to the databases after this date (even those published prior to this date) were not included unless specifically stated in the text. We do not routinely search for electronic, ahead of print or “online early” publications. Where possible searches were limited to retrieve material published in English.

Table 1: Database date parameters

Database	Dates searched
Medline	1946 – 22 December 2014
Embase	1974 – December 2014 (week 51)
The Cochrane Library	Cochrane Reviews to 2014 Issue 12 of 12 CENTRAL to 2014 Issue 11 of 12 DARE, HTA and NHSEED to 2014 Issue 4 of 4
CINAHL	1981 – 22 December 2014
PsycINFO	1987 to December Week 3 2014

Searches for the **clinical reviews** were run in Medline (OVID), Embase (OVID) and the Cochrane Library (Wiley). Additional searches were run in CINAHL and PsycINFO for the training and education question.

Searches for **intervention and diagnostic studies** were usually constructed using a PICO format where population (P) terms were combined with Intervention (I) and sometimes Comparison (C) terms. An intervention can be a drug, a procedure or a diagnostic test. Outcomes (O) are rarely used in search strategies for interventions. Search filters were also added to the search where appropriate.

Searches for the **health economic reviews** were run in Medline (OVID), Embase (OVID), the NHS Economic Evaluations Database (NHS EED), the Health Technology Assessment (HTA) database and the Health Economic Evaluation Database (HEED). Searches in NHS EED and HEED were constructed using population terms only. For Medline and Embase an economic filter (instead of a study type filter) was added to the same clinical search strategy.

F.1 Population search strategies

F.1.1 Paediatric search terms

Medline search terms

1	exp child/
2	exp pediatrics/
