## 1. Search Strategy

### Search methods

A systematic search of electronic databases was conducted to identify relevant studies. Searching took place on 22-24 June 2016 for transport interventions and on 29 June 2016 for open space interventions. The strategies were developed by an information specialist at NICE and peer reviewed by a colleague from the same team.

The databases were searched using a combination of subject headings and free-text terms arranged in the following format:

- (Physical activity AND Transport interventions) OR Named interventions AND 2006-2016 AND Limits
- (Physical activity AND Open space interventions) AND 2006-2016 AND Limits

Date limits were applied to restrict the database results to 2006-Current. Database functionality was used, where available, to exclude:

- non-English language papers
- studies reporting experiments on animals
- editorials, letters and commentaries
- conference abstracts and posters
- theses and dissertations
- duplicates.

The search strategy was developed in MEDLINE (Ovid interface, 1946 to June 2016) after discussing with PHAC members at meeting 0 in June 2016. The strategy was adapted for use in the other databases, taking into account their size, search functionality and subject coverage. The following databases were searched:

- Applied Social Science Index and Abstracts (ASSIA) via ProQuest - 1987-Current
- Cochrane Central Register of Controlled Trials (CENTRAL) via Wiley - Issue 5 of 12, May 2016
- Cochrane Database of Systematic Reviews (CDSR) via Wiley - Issue 6 of 12, June 2016
- Database of Abstracts of Reviews of Effects (DARE) via Wiley - Issue 2 of 4, April 2015 (last date of entry, no longer being updated)

## NG90 Physical Activity and the Environment – Appendix 3: Search strategies

- Embase via Ovid - 1974 to 2016 June 22 [transport interventions]; 1974 to 2016 Week 26 [open space]
- Greenfile via EBSCO
- Health Management Information Consortium (HMIC) via Ovid - 1979 to May 2016
- MEDLINE via Ovid - 1946 to June Week 3 2016
- MEDLINE-in-Process via Ovid - Ovid MEDLINE(R) In-Process & Other Non-Indexed Citations June 22, 2016 [transport interventions]; June 28, 2016 [open space]
- Social Policy and Practice (SPP) via Ovid - 201604
- Transport via Ovid - Pre-1987 to May 2016
- Trials Register of Promoting Health Interventions (TRoPHI) via <https://epi.ioe.ac.uk/webdatabases4/Intro.aspx?ID=12>

The following additional databases were searched to identify cost effectiveness literature:

- Benefit-Costs Results via <http://www.wsipp.wa.gov/BenefitCost>
- Health Technology Assessment database via Wiley - Issue 2 of 4, April 2016
- EconLit via Ovid - 1886 to May 2016
- EconPapers via <http://econpapers.repec.org>
- NHS Economics Evaluation Database (NHS EED) via Wiley - Issue 2 of 4, April 2015 (last date of entry, no longer being updated)

The MEDLINE strategy is presented below and the full strategies for the other sources are available on request.

The database searches were supplemented by extracting potentially relevant references from:

- The draft scope consultation for this topic
- NICE Evidence Update (April 2014) Physical activity and the environment
- Papers cited in the surveillance review “Consideration of an update of the public health guidance on ‘Physical activity and the environment’ (PH8). April 2014”.
- The internal NICE document “What’s new in your subject? Public health” from January 2015 to June 2016
- Suggestions received from topic experts, committee members, stakeholders and others

## NG90 Physical Activity and the Environment – Appendix 3: Search strategies

- Papers marked as possibly relevant during the screening process for “Surveillance report - physical activity: walking and cycling (2012) NICE guideline PH41”
- Papers cited in a forthcoming systematic review received in confidence.

The results from this reference harvesting were added to the relevant EndNote files.

For transport interventions, the 10,060 results (10041 from database searching and 19 from reference harvesting) were processed in EndNote and 2325 duplicates were removed using a combination of automated and manual processes. There were 7735 records remaining after removing the duplicates. The 7735 records were exported from EndNote in a ris file for uploading to EPPI-Reviewer.

For the open space interventions, the 10,366 results (10292 from database searching and 74 from reference harvesting) were processed in EndNote and 2578 duplicates were removed using a combination of automated and manual processes. There were 7788 records remaining after removing the duplicates. The 7788 records were exported from EndNote in a ris file for uploading to EPPI-Reviewer.

Systematic reviews potentially relevant to any of the review questions were marked during the screening process for further investigation. The reference lists of 18 relevant systematic reviews that closely met the inclusion criteria were checked. Of the studies included in these systematic reviews, twenty three appeared relevant and were screened at title and abstract. Full papers were ordered for 7 studies. Of these, 4 were included.

A search of relevant websites was conducted from 1 to 5 August 2016. The websites were selected after consultation with PHAC members at meeting 0 in June 2016 and they are listed below. The websites were browsed on screen and the details of documents relevant to any of the review questions were added to a Word document. 259 results were recorded in Word for initial screening.

The following websites were searched on 5 August 2016 for terms relating to cycling, walking, physical activity, physical activities, active living, active travel and active transport:

- NICE Evidence Search <http://www.evidence.nhs.uk> - searches restricted to Area of Interest>Public Health and filters applied for Policy & Service Development, Population Intelligence, Guidance, Primary Research.
- OpenGrey <http://www.opengrey.eu/> - searches restricted to documents from the UK and in report format from after 2006 e.g. cycling origin:"GB" doctype:(R - Report) and excluded dissertations.
- Google.co.uk - <https://www.google.co.uk/> results were restricted to the .gov.uk, .org.uk and .nhs.uk domains, pdf format and the first 100 results (or 10 pages) were reviewed.

## 2. Review Protocols

Topic 1	Transport interventions in the built or natural environment	
Component of protocol	Description	Additional comments
<b>Review question 1</b>	Which transport interventions are effective and cost-effective in encouraging and supporting physical activity in all population groups, including those less able to be physically active?	
Context and objectives	<p>To determine the effectiveness and cost effectiveness of interventions that focus on transport, including the planning and provision of walking and cycling routes, prioritising the needs of active transport users and the provision of public transport, to:</p> <ul style="list-style-type: none"> <li>• support and encourage people to build physical activity into their daily lives</li> <li>• increase opportunities for, and uptake of, formal or informal recreational activity</li> <li>• reduce sedentary time</li> <li>• increase the opportunity for, and uptake of, active travel such as walking or cycling (including the use of adapted cycles)</li> </ul>	
Types of study to be included/excluded	<p>Inclusions:</p> <p>Comparative studies including:</p> <ul style="list-style-type: none"> <li>• Randomised or non-randomised controlled trials</li> <li>• Before and after studies</li> <li>• Cohort studies</li> <li>• Case-control studies</li> </ul> <p>Economic studies:</p> <ul style="list-style-type: none"> <li>• Economic evaluations</li> <li>• Cost-utility (cost per QALY)</li> <li>• Cost benefit (i.e. Net benefit)</li> </ul>	<ul style="list-style-type: none"> <li>• If there is a large number of includes for the question, evidence may be prioritised, where available, by study design (e.g. RCTs prioritised over observational studies) in consultation with PHAC. Where there is a lack of higher quality</li> </ul>

NG90 Physical Activity and the Environment – Appendix 3: Search strategies

Topic 1	Transport interventions in the built or natural environment	
Component of protocol	Description	Additional comments
	<ul style="list-style-type: none"> <li>• Cost-effectiveness (Cost per unit of effect)</li> <li>• Cost minimisation</li> <li>• Cost-consequence</li> </ul>	<p>evidence for different population groups, in particular those who are less able to be physically active, a lower quality of evidence may be considered.</p> <ul style="list-style-type: none"> <li>• It is unlikely that cross-sectional and other surveys will be included in the review unless there is an absence of other evidence. This will be agreed with PHAC as appropriate.</li> <li>• Systematic reviews will only be used as a source for primary evidence.</li> <li>• Only full economic analyses will be included – papers reporting costs only will be excluded.</li> </ul>
Participants/population	<p>Whole population (adults and children) with particular consideration of groups who are less able to be physically active including:</p> <ul style="list-style-type: none"> <li>• Older people</li> </ul>	

Topic 1	Transport interventions in the built or natural environment	
Component of protocol	Description	Additional comments
	<ul style="list-style-type: none"> <li>• People with disabilities including mental, physical, sensory and learning impairments which impact on their ability to be physically active</li> </ul>	
Intervention(s)	<p>Interventions which prioritise the needs of pedestrians, cyclists and users of other modes of active transport, including:</p> <ul style="list-style-type: none"> <li>• re-allocating road space to support physically active modes of transport such as cycling and walking e.g. shared road space</li> <li>• interventions that enable people with restricted mobility to be physically active by ensuring their local environments are accessible and can be used by all groups e.g. road crossing times, introduction/improvement of pedestrian crossings</li> <li>• planning and providing walking and cycling networks (such as Connect2), infrastructure links with existing networks and facilities e.g. signed only and segregated walking/cycle paths, wayfinding networks/signage, on-street cycle parking</li> <li>• public transport provision, networks, links and facilities (e.g. cycle parking)</li> <li>• parking restrictions and charges e.g. controlled parking zones, parking charges, waiting and loading restrictions</li> <li>• traffic-calming measures to restrict vehicle speeds e.g. sign only speed limits, physical interventions such as road humps and speed cushions</li> <li>• speed restrictions</li> <li>• road-user charging schemes e.g. congestion zones, local emission zones (LEZs)</li> <li>• temporary road closures e.g. ciclovia, ‘School Streets’</li> <li>• Other named interventions e.g. ‘Cycling Cities’, ‘Walking Cities’</li> </ul>	<p>The following interventions will not be included:</p> <ul style="list-style-type: none"> <li>• Interventions to increase physical activity as part of managing chronic or other conditions.</li> <li>• Interventions that aim to change individual behaviour by providing and encouraging people to take up activities that take place in the built or natural environment e.g. exercise classes, green gyms and organised walks.</li> <li>• Interventions covered by <a href="#">PH41</a> (walking and cycling) which covers the design, deliver and promotion of interventions within</li> </ul>

NG90 Physical Activity and the Environment – Appendix 3: Search strategies

Topic 1	Transport interventions in the built or natural environment	
Component of protocol	Description	Additional comments
		<p>the environment rather than changes to the physical environment itself.</p> <ul style="list-style-type: none"> <li>• Re traffic calming, speed cushions and speed restrictions to be aware that may be overlap with PH31 and PH29</li> </ul>
Comparator(s)/control	<p>Comparators that will be considered are:</p> <ul style="list-style-type: none"> <li>• Other interventions</li> <li>• Status quo/do nothing/control</li> <li>• Time (before and after) or area (i.e. matched city a vs b) comparisons</li> </ul>	
Outcome(s)	<p>The outcomes that will be considered when assessing the impact on physical activity are:</p> <p>Primary outcomes:</p> <ul style="list-style-type: none"> <li>• total physical activity (as measured by e.g. time/distance/number of steps/levels of activity/levels of recommended PA)</li> <li>• total sedentary time (as measured by time)</li> <li>• Domain-specific physical activity levels (active travel or physical activity in everyday life (such as measures of walking, cycling or active play))</li> <li>• public transport use (as a proxy measure of physical activity)</li> </ul> <p>Secondary outcomes:</p>	<ul style="list-style-type: none"> <li>• Included studies should have an indicator of physical activity reported.</li> <li>• Included studies reporting any health outcomes will be noted in EPPI/the evidence tables and forwarded on to EMU for economic modelling and not for the purposes of this review.</li> </ul>

NG90 Physical Activity and the Environment – Appendix 3: Search strategies

Topic 1	Transport interventions in the built or natural environment	
Component of protocol	Description	Additional comments
	<ul style="list-style-type: none"> <li>• changes to road environment e.g. introduction of traffic calming measures</li> <li>• changes to transport (such as changes in modal share)</li> <li>• vehicle speeds</li> <li>• car use</li> </ul>	

Topic 1	Transport interventions in the built or natural environment	
Component of protocol	Description	Additional comments
<b>Review question 2</b>	Does the effectiveness and cost effectiveness vary for different population groups in terms of encouraging and supporting physical activity? In particular, does this vary for those groups who are less able to be physically active, and if so how?	
Context and objectives	To determine any variation in the effectiveness and cost effectiveness of transport interventions (such as the planning and provision of walking and cycling routes, prioritising the needs of active transport users and the provision of public transport) between different population groups, in particular for groups who are less able to be physically active.	
Types of study to be included/excluded	<p>Inclusions:</p> <p>Comparative studies including:</p> <ul style="list-style-type: none"> <li>• Randomised or non-randomised controlled trials</li> <li>• Before and after studies</li> <li>• Cohort studies</li> <li>• Case-control studies</li> </ul>	<ul style="list-style-type: none"> <li>• If there is a large number of includes for the question, evidence may be prioritised, where available, by study design (e.g. RCTs prioritised over</li> </ul>

Topic 1	Transport interventions in the built or natural environment	
Component of protocol	Description	Additional comments
	<p>Economic studies:</p> <ul style="list-style-type: none"> <li>• Economic evaluations</li> <li>• Cost-utility (cost per QALY)</li> <li>• Cost benefit (i.e. Net benefit)</li> <li>• Cost-effectiveness (Cost per unit of effect)</li> <li>• Cost minimisation</li> <li>• Cost-consequence</li> </ul>	<p>observational studies) in consultation with PHAC. Where there is a lack of higher quality evidence for different population groups, in particular those who are less able to be physically active, a lower quality of evidence may be considered.</p> <ul style="list-style-type: none"> <li>• It is unlikely that cross-sectional and other surveys will be included in the review unless there is an absence of other evidence. This will be agreed with PHAC as appropriate.</li> <li>• Systematic reviews will only be used as a source for primary evidence.</li> <li>• Only full economic analyses will be included – papers</li> </ul>

Topic 1	Transport interventions in the built or natural environment	
Component of protocol	Description	Additional comments
		reporting costs only will be excluded.
Participants/population	<p>Whole population (adults and children) with particular consideration of groups who are less able to be physically active including:</p> <ul style="list-style-type: none"> <li>• Older people</li> <li>• People with disabilities including mental, physical, sensory and learning impairments which impact on their ability to be physically active</li> </ul>	
Intervention(s)	<p>Interventions which prioritise the needs of pedestrians, cyclists and users of other modes of active transport, including:</p> <ul style="list-style-type: none"> <li>• re-allocating road space to support physically active modes of transport such as cycling and walking e.g. shared road space</li> <li>• interventions that enable people with restricted mobility to be physically active by ensuring their local environments are accessible and can be used by all groups e.g. road crossing times, introduction/improvement of pedestrian crossings</li> <li>• planning and providing walking and cycling networks (such as Connect2), infrastructure links with existing networks and facilities e.g. signed only and segregated walking/cycle paths, wayfinding networks/signage, on-street cycle parking</li> <li>• public transport provision, networks, links and facilities (e.g. cycle parking)</li> <li>• parking restrictions and charges e.g. controlled parking zones, parking charges, waiting and loading restrictions</li> <li>• traffic-calming measures to restrict vehicle speeds e.g. sign only speed limits, physical interventions such as road humps and speed cushions</li> <li>• speed restrictions</li> </ul>	<p>The following interventions will not be included:</p> <ul style="list-style-type: none"> <li>• Interventions to increase physical activity as part of managing chronic or other conditions.</li> <li>• Interventions that aim to change individual behaviour by providing and encouraging people to take up activities that take place in the built or natural environment e.g. exercise classes, green gyms and organised walks.</li> </ul>

2

3 **QA EPOC Checklist for RCTs, non-randomised controlled trials and controlled before-after studies**

4 **Administrative details**

<b>Study name or author and year</b> [Type study name, or author and year (include letter if more than 1 paper with the same author and year, e.g. 'Smith 2010a')] 	<b>STAR ID</b> [Type STAR ID] 
<b>Citation</b> [Include citation details – usually authors, title of study, journal details, year] 	
<b>Linked studies (study name or author, year, STAR ID)</b> [Include study name or author, year and STAR ID of any related studies, or state 'None'] 	
<b>Final study quality score</b> [Click to choose the final quality score. See 'Calculation of final study quality score' below for details on how to complete this.] 	
<b>Date of QA</b> [Click to choose the date the QA was completed] 	<b>Reviewer(s) names</b> [Type name of the reviewer/reviewers completing the quality assessment] 

5

6 **Calculation of final study quality score (from box 6.1 on page 95 of the NICE Guidelines Manual)**

- ++ All or most of the checklist criteria have been fulfilled, and where they have not been fulfilled the conclusions are very unlikely to alter.
- + Some of the checklist criteria have been fulfilled, and where they have not been fulfilled, or are not adequately described, the conclusions are unlikely to alter.
- Few or no checklist criteria have been fulfilled and the conclusions are likely or very likely to alter.

7 **Quality Assessment**

8

**For all questions:**

- ++ 'Yes' The study full meets the criterion.
- + 'Partly' The study largely meets the criterion but differs in some important respect.
- 'No' The study deviates substantially from the criterion.
- 'Unclear' Report provides insufficient information to judge whether the study complies with the criterion.
- 'NA (not applicable)' The criterion is not relevant in this particular instance.

Item	Decision	Comments
1. Was the allocation sequence adequately generated?	[Click here to choose a decision. ++ if a random component in the sequence generation process is described (e.g. a random number table), - if a non-random method is used (e.g. date of admission) or if study is a non-randomised controlled trial or controlled before-after study]	[State how the allocation sequence was generated.]
2. Was the allocation adequately concealed?	[Click here to choose a decision. ++ if allocation by institution, team or professional and allocation performed on all units at start of the study, or if the unit of allocation was by patient or episode of care and there was a centralised randomisation scheme (on-site computer system or sealed opaque envelopes). – if controlled before-after study.]	[State how the allocation was concealed.]
3. Were baseline outcome measurements similar?	[Click here to choose a decision. ++ if performance or patient outcomes were measured prior to intervention and no important differences present across study groups. In RCTs score ++ if imbalanced but appropriate adjusted analysis was performed (e.g. analysis of covariance). Score - if important differences were present and not adjusted for in analysis.]	[State whether the baseline outcome measurements were similar.]
4. Were baseline characteristics similar?	[Click here to choose a decision. ++ if baseline characteristics of the study and control providers are	[State whether the baseline characteristics were similar.]

NG90 Physical Activity and the Environment – Appendix 3: Search strategies

	reported and similar. Score - if there is no report of characteristics or if there are differences between control and intervention providers.]	
5. Were incomplete outcome data adequately addressed?	[Click here to choose a decision. ++ if missing outcome measures were unlikely to bias the results (e.g. the proportion of missing data was similar in the intervention and control groups or the proportion of missing data was less than the effect size i.e. unlikely to overturn the study result). Score - if missing outcome data was likely to bias the results.]	[State whether incomplete outcome data were adequately addressed.]
6. Was knowledge of the allocated interventions adequately prevented during the study?	[Click here to choose a decision. ++ if the authors state explicitly that primary outcome variables were assessed blindly, or outcomes are objective, e.g. length of hospital stay. Score - if primary outcomes were not assessed blindly.]	[State whether knowledge of the allocated interventions was adequately prevented during the study.]
7. Was the study adequately protected against contamination?	[Click here to choose a decision. ++ if allocation by community, institution or practice and it is unlikely that the control group received the intervention. Score - if it is likely that the control group received the intervention (e.g. if patients rather than professionals were randomised). Score “unclear” if professionals were allocated within a clinic or practice and it is possible that communication between intervention and control professionals could have occurred (e.g. physicians within practices	[State whether the study was adequately protected against contamination.]

NG90 Physical Activity and the Environment – Appendix 3: Search strategies

	were allocated to intervention or control).]	
8. Was the study free from selective outcome reporting?	[Click here to choose a decision. ++ if there is no evidence that outcomes were selectively reported (e.g. all relevant outcomes in the methods section are reported in the results section). Score - if some important outcomes are subsequently omitted from the results.]	[State whether the study was free from selective outcome reporting.]
9. Was the study free from other risks of bias?	[Click here to choose a decision. Score ++ if there is no evidence of other risk of biases.]	[State whether the study was free from other risks of bias.]

17

18 **Quality Assessment**

<b>Item</b>	<b>Component Rating</b>	<b>Section Rating</b>	<b>Comments</b>
Selection bias			

## NG90 Physical Activity and the Environment – Appendix 3: Search strategies

1. Are the individuals selected to participate in the study likely to be representative of the target population?	[Click here to choose a rating. Score 'very likely' if randomly selected from a comprehensive list of individuals in target population, 'somewhat likely' if referred from a source (e.g. clinic) in a systematic manner, 'not likely' if self-referred.]	[Click here to choose a decision. 'Strong' if Q1 is 'very likely' and Q2 is 80 to 100%. 'Moderate' if Q1 is 'very likely' or 'somewhat likely' and Q2 is 60 or 79% or 'can't tell'. 'Weak' if Q1 is 'not likely' or 'can't tell' and Q2 is 'can't tell'.]	[Add comments if necessary.]
2. What percentage of selected individuals agreed to participate?	[Click here to choose a rating.]		
<b>Study design</b>			
3. What is the study design?	[Click here to choose a rating.]	[Click here to choose a decision. 'Strong' if RCT or CCT, 'moderate' if cohort analytic study, case control study, a cohort design, or interrupted time series, 'weak' for any other method or did not state method used.]	[Add comments if necessary, including description of study design if 'other'.]
4. Was the study described as randomised?	[Click here to choose a rating. If 'no', mark questions 5 and 6 as 'not applicable' and go straight to 'Confounders' section.]		
5. Was the method of randomisation described?	[Click here to choose a rating.]		
6. Was the method of randomisation appropriate?	[Click here to choose a rating.]		
<b>Confounders</b>			
7. Were there important differences between groups prior to the intervention?	[Click here to choose a rating. Example of confounders include race, sex, marital status/family, age, socioeconomic status, education, health status, pre-intervention score on outcome measure.]	[Click here to choose a decision. 'Strong' if Q7 is 'no' or Q2 is 80% or more. 'Moderate' if Q7 is 'yes' and Q8 is 60 to 79%. 'Weak' if Q7 is 'yes' and Q8 is less than 60%, or if Q7 is 'cant tell' and Q8 is 'can't tell'.]	[Add comments if necessary.]
8. If yes, what percentage of relevant confounders were controlled (either in the design [e.g. stratification, matching] or analysis)?	[Click here to choose a rating.]		
<b>Blinding</b>			

NG90 Physical Activity and the Environment – Appendix 3: Search strategies

9. Was/were the outcome assessor/s aware of the intervention or exposure status of participants?	[Click here to choose a rating.]	[Click here to choose a decision. 'Strong' if Q9 is 'no' and Q10 is 'no'. 'Moderate' if Q9 is 'no' or Q10 is 'no', or Q9 is 'can't tell' and Q10 is 'can't tell'. 'Weak' if Q9 is 'yes' and Q10 is 'yes'.]	[Add comments if necessary.]
10. Were the study participants aware of the research question?	[Click here to choose a rating.]		
<b>Data collection methods</b>			
11. Were data collection tools shown to be valid?	[Click here to choose a rating.]	[Click here to choose a decision. 'Strong' if Q11 is 'yes' and Q12 is 'yes'. 'Moderate' if Q11 is 'yes' and Q12 is 'no' or Q12 is 'can't tell'. 'Weak' if Q11 is 'no' or Q11 is 'can't tell' and Q12 is 'can't tell'.]	[Add comments if necessary.]
12. Were data collection tools shown to be reliable?	[Click here to choose a rating.]		
<b>Withdrawals and drop-outs</b>			
13. Were withdrawals and drop-outs reported in terms of numbers and/or reasons per group?	[Click here to choose a rating.]	[Click here to choose a decision. 'Strong' if Q14 is 80% or more. 'Moderate' if Q14 is 60 to 79% or 'not applicable'. 'Weak' if Q14 is less than 60% or 'can't tell'.]	[Add comments if necessary.]
14. What percentage of participants completed the survey?	[Click here to choose a rating. If percentage differs by groups, record the lowest.]		
<b>Intervention integrity</b>			
15. What percentage of participants received the allocated intervention or exposure of interest?	[Click here to choose a rating. If percentage differs by groups, record the lowest.]	Section rating not required.	[Add comments if necessary.]
16. Was the consistency of the intervention measured?	[Click here to choose a rating.]		
17. Is it likely that subjects received an	[Click here to choose a rating.]		

NG90 Physical Activity and the Environment – Appendix 3: Search strategies

unintended intervention (contamination or co-intervention) that may influence the results?			
<b>Analyses</b>			
18. What is the unit of allocation?	[Click here to choose a rating.]	Section rating not required.	[Add comments if necessary. Add details if 'other' selected for question 18 and/or 19.]
19. What is the unit of analysis?	[Click here to choose a rating.]		
20. Are the statistical methods appropriate for the study design?	[Click here to choose a rating.]		
21. Is the analysis performed by intervention allocation status (i.e. intention to treat) rather than the actual intervention received?	[Click here to choose a rating.]		

19

20

21 **Methodology checklist: Qualitative studies**

<b>Study identification</b>	
<b>Guidance topic:</b>	<b>Key research question/aim:</b>
<b>Checklist completed by:</b>	

22

<b>Theoretical approach</b>		
<p><b>1. Is a qualitative approach appropriate?</b></p> <p><i>For example,</i></p> <ul style="list-style-type: none"> <li>• Does the research question seek to understand processes or structures, or illuminate subjective experiences or meanings?</li> <li>• Could a quantitative approach better have addressed the research question?</li> </ul>	Choose an item.	Comments:
<p><b>2. Is the study clear in what it seeks to do?</b></p> <p><i>For example,</i></p> <ul style="list-style-type: none"> <li>• Is the purpose of the study discussed – aims/objectives/research question/s?</li> <li>• Is there adequate/appropriate reference to the literature?</li> <li>• Are underpinning values/assumptions/theory discussed?</li> </ul>	Choose an item.	Comments:

23

<b>Study design</b>		
<p><b>3. How defensible/rigorous is the research design/methodology?</b></p> <p><i>For example,</i></p> <ul style="list-style-type: none"> <li>• Is the design appropriate to the research question?</li> <li>• Is a rationale given for using a qualitative approach?</li> <li>• Are there clear accounts of the rationale/justification for the sampling, data collection and data analysis techniques used?</li> <li>• Is the selection of cases/sampling strategy theoretically justified?</li> </ul>	Choose an item.	Comments:

24

25  
26  
27  
28

<b>Data collection</b>		
<p><b>4. How well was the data collection carried out?</b></p> <p><i>For example,</i></p> <ul style="list-style-type: none"> <li>• Are the data collection methods clearly described?</li> <li>• Were the appropriate data collected to address the research question?</li> <li>• Was the data collection and record keeping systematic?</li> </ul>	Choose an item.	Comments:

29

<b>Trustworthiness</b>		
<p><b>5. Is the role of the researcher clearly described?</b></p> <p><i>For example,</i></p> <ul style="list-style-type: none"> <li>• Has the relationship between the researcher and the participants been adequately considered?</li> <li>• Does the paper describe how the research was explained and presented to the participants?</li> </ul>	Choose an item.	Comments:
<p><b>6. Is the context clearly described?</b></p> <p><i>For example,</i></p> <ul style="list-style-type: none"> <li>• Are the characteristics of the participants and settings clearly defined?</li> <li>• Were observations made in a sufficient variety of circumstances?</li> <li>• Was context bias considered?</li> </ul>	Choose an item.	Comments:
<p><b>7. Were the methods reliable?</b></p> <p><i>For example,</i></p> <ul style="list-style-type: none"> <li>• Was data collected by more than one method?</li> <li>• Is there justification for triangulation, or for not triangulating?</li> <li>• Do the methods investigate what they claim to?</li> </ul>	Choose an item.	Comments:

30

## NG90 Physical Activity and the Environment – Appendix 3: Search strategies

<b>Analysis</b>		
<p><b>8. Is the data analysis sufficiently rigorous?</b></p> <p><i>For example,</i></p> <ul style="list-style-type: none"> <li>• Is the procedure explicit – i.e. is it clear how the data was analysed to arrive at the results?</li> <li>• How systematic is the analysis, is the procedure reliable/dependable?</li> <li>• Is it clear how the themes and concepts were derived from the data?</li> </ul>	Choose an item.	Comments:
<p><b>9. Is the data 'rich'?</b></p> <p><i>For example,</i></p> <ul style="list-style-type: none"> <li>• How well are the contexts of the data described?</li> <li>• Has the diversity of perspective and content been explored?</li> <li>• How well has the detail and depth been demonstrated?</li> <li>• Are responses compared and contrasted across groups/sites?</li> </ul>	Choose an item.	Comments:
<p><b>10. Is the analysis reliable?</b></p> <p><i>For example,</i></p> <ul style="list-style-type: none"> <li>• Did more than one researcher theme and code transcripts/data?</li> <li>• If so, how were differences resolved?</li> <li>• Did participants feed back on the transcripts/data if possible and relevant?</li> <li>• Were negative/ discrepant results addressed or ignored?</li> </ul>	Choose an item.	Comments:
<p><b>11. Are the findings convincing?</b></p> <p><i>For example,</i></p> <ul style="list-style-type: none"> <li>• Are the findings clearly presented?</li> <li>• Are the findings internally coherent?</li> <li>• Are extracts from the original data included?</li> <li>• Is the data appropriately referenced?</li> <li>• Is the reporting clear and coherent?</li> </ul>	Choose an item.	Comments:
<p><b>12. Are the findings relevant to the aims of the study?</b></p>	Choose an item.	Comments:

40 **Key to questions:**

- 41 1. Was the allocation sequence adequately generated?
- 42 2. Was the allocation adequately concealed?
- 43 3. Were baseline outcome measurements similar?
- 44 4. Were baseline characteristics similar?
- 45 5. Were incomplete outcome data adequately addressed?
- 46 6. Was knowledge of the allocated interventions adequately prevented during the study?
- 47 7. Was the study adequately protected against contamination?
- 48 8. Was the study free from selective outcome reporting?
- 49 9. Was the study free from other risks of bias?

60 **Key to questions:**

- 61 1. Is a qualitative approach appropriate?
- 62 2. Is the study clear in what it seeks to do?
- 63 3. How defensible / rigorous is the research design / methodology?
- 64 4. How well was the data collection carried out?
- 65 5. Is the role of the researcher clearly described?
- 66 6. Is the context clearly described?
- 67 7. Were the methods reliable?
- 68 8. Is the data analysis sufficiently rigorous?
- 69 9. Is the data 'rich'?
- 70 10. Is the analysis reliable?
- 71 11. Are the findings convincing?
- 72 12. Are the findings relevant to the aims of the study?
- 73 13. Conclusions
- 74 14. How clear and coherent is the reporting of ethics?

81

Authors	Title	Reason for exclusion
Aird (2015)	Active aging: Exploration into self-ratings of "being active," out-of-home physical activity, and participation among older Australian adults living in four different settings	• EXCLUDE on intervention
Albildso et al, 2012	Assessing the cost effectiveness of a community rail-trail in achieving physical activity gains	• EXCLUDE - unavailable
Anonymous (2015)	Impact of Safe Routes to School programs on walking and biking	• EXCLUDE - study type
Arredondo (2013)	Advocating for environmental changes to increase access to parks: engaging promotoras and youth leaders	• EXCLUDE on outcomes
Audrey (2015)	Healthy urban environments for children and young people: A systematic review of intervention studies	• EXCLUDE relevant systematic review
Aytur (2008)	Urban Containment Policies and Physical Activity. A Time-Series Analysis of Metropolitan Areas, 1990-2002	• EXCLUDE on intervention
Backing the bus (2006)	Backing the bus	• EXCLUDE - study type
Barnes et al., 2006	A longitudinal analysis of the effect of bicycle facilities on commute mode share	• EXCLUDE - duplicate
Bassett (2013)	Estimated energy expenditures for school-based policies and active living	• EXCLUDE on study type
Beale (2012)	Should we invest in environmental interventions to encourage physical activity in England? An economic appraisal	• EXCLUDE on study type
Bicycles 2010 (2010)	Bicycles 2010	• EXCLUDE - unavailable
Boarnet et al (2008)	Walking, Urban Design, and Health Toward a Cost-Benefit Analysis Framework	• EXCLUDE - study type
Boehm (2013)	Transformation of an Urban Corridor	• EXCLUDE no data to extract
Boone-Heinonen et al, 2010	Residential self-selection bias in the estimation of built environment effects on physical activity between adolescence and young adulthood	• EXCLUDE - no data to extract

PHAC C 27.X Evidence review 1 – appendix 3

Brown (2015)	Congestion Pricing and Active Transport - Evidence from Five Opportunities for Natural Experiment	• EXCLUDE - relevant systematic review
Brown (2016)	A systematic review of economic analyses of active transport interventions that include physical activity benefits	• EXCLUDE - relevant systematic review
Bruhova (2012)	Statistical analysis of the impact of policies on active transport in European cities	• EXCLUDE on intervention
Buckley (2013)	Evaluating safe routes to school events that designate days for walking and bicycling	• EXCLUDE on intervention
Burbage (2014)	Building mutually beneficial partnerships to improve physical activity opportunities through shared-use efforts in under-resourced communities in Los Angeles County	• EXCLUDE - out of scope
Burbidge (2008)	Evaluating the Impact of Neighborhood Trail Development on Active Travel Behavior and Overall Physical Activity	• EXCLUDE - out of scope
Burgoyne (2007)	Walking in a city neighbourhood, paving the way	• EXCLUDE - out of scope
Burke (2009)	The Path to Active Living: Physical Activity Through Community Design in Somerville, Massachusetts	• EXCLUDE on outcomes
Calise (2012)	The effect of a neighborhood built environment on physical activity behaviors	• EXCLUDE on intervention
Carlson (2009)	Reducing Auto Congestion Around Schools: Transportation Demand Strategies for Schools Phase II Report	• EXCLUDE on intervention
Carman (2007)	Walking to Maintain and Improve Health: How the Integration of Sidewalks and Walking Paths in Senior Communities Promotes Successful Aging	• EXCLUDE no data to extract
Catacchio (2011)	More Cyclists + Better Design = Safer Roadways	• EXCLUDE - no data to extract
Caulfield (2014)	Re-cycling a City--Examining the Growth of Cycling in Dublin	• EXCLUDE - study type
Cavill (2011)	Cycling demonstration towns: A cost-effective investment to promote physical activity	• EXCLUDE - no data to extract

PHAC C 27.X Evidence review 1 – appendix 3

Cedervall (2010)	Physical activity and implications on well-being in mild Alzheimer's disease: A qualitative case study on two men with dementia and their spouses	• EXCLUDE on country
Chapman (2014)	Increasing active travel: aims, methods and baseline measures of a quasi-experimental study	• EXCLUDE - no data to extract
Chaufan (2012)	The safe routes to school program in California: an update	• EXCLUDE - study type
Cheadle (2010)	Approaches to measuring the extent and impact of environmental change in three California community-level obesity prevention initiatives	• EXCLUDE on study type
Cheadle (2012)	Kaiser Permanente's Community Health Initiative in Northern California: evaluation findings and lessons learned	• EXCLUDE on intervention
Chillon (2011)	A systematic review of interventions for promoting active transportation to school	• EXCLUDE - relevant systematic review
Clark (2010)	Key stakeholder perspectives on the development of walkable neighbourhoods	• EXCLUDE - out of scope
Cleland (2014)	Identifying solutions to increase participation in physical activity interventions within a socio-economically disadvantaged community: A qualitative study	• EXCLUDE on intervention
Cobiac et al 2009	Cost-effectiveness of interventions to promote physical activity: a modelling study	• EXCLUDE - study type
Cohen (2008)	Impact of a new bicycle path on physical activity	• EXCLUDE - no data to extract
Cohen (2012)	Impact and cost-effectiveness of family Fitness Zones: A natural experiment in urban public parks	• EXCLUDE on intervention [Info] Green gym equipment
Cohen (2016)	CicLavia: Evaluation of participation, physical activity and cost of an open streets event in Los Angeles	• EXCLUDE - study type
Cope et al 2010	Cycling demonstration Towns - an economic evaluation.	• EXCLUDE - duplicate [Info] data reported elsewhere

PHAC C 27.X Evidence review 1 – appendix 3

COWI and City of Copenhagen 2009	Economic Evaluation of cycle projects - methodology and unit prices	• EXCLUDE on study type [Info] Cross sectional survey
Cranney (2016)	Impact of an outdoor gym on park users' physical activity: A natural experiment	• EXCLUDE on intervention [Info] outdoor gym installation
Crawford (2013)	Tampa combines bus and toll lanes	• EXCLUDE - unavailable
Davey (2008)	Design of a pragmatic cluster randomised controlled trial: Ecological approach to increasing physical activity in an urban community	• EXCLUDE on intervention
De Cocker , Katrien A, De Bourdeaudhuij , Ilse M, Brown Wendy J, and Cardon Greet M, 2007	Effects of '10,000 Steps Ghent' A Whole-Community Intervention	• EXCLUDE on intervention
De Oliveira (2013)	How effective is the Forestry Commission Scotland's woodland improvement programme-'Woods In and Around Towns' (WIAT)-at improving psychological well-being in deprived urban communities? A quasi-experimental study	• EXCLUDE no data to extract
De Smedt et al 2012	A cost-effectiveness study of the community-based intervention "10 000 Steps Ghent"	• EXCLUDE on intervention
Deehr (2009)	Active Seattle: Achieving Walkability in Diverse Neighborhoods	• EXCLUDE on outcomes
Dobson (2009)	From Partnership to Policy: The Evolution of Active Living by Design in Portland, Oregon	• EXCLUDE on outcomes
Economic appraisal of... (2006)	Economic appraisal of local walking and cycling routes	• EXCLUDE - unavailable
Engelberg (2014)	Ciclovía participation and impacts in San Diego, CA: The first CicloSDias	• EXCLUDE on outcomes
Farley (2007)	Safe play spaces to promote physical activity in inner-city children: Results from a pilot study of an environmental intervention	• EXCLUDE on intervention [Info] schoolyards
Fishman (2015)	Dutch Cycling: Quantifying the Health and Related Economic Benefits	• EXCLUDE - study type
Frank (2008)	Urban planning and public health: A story of separation and reconnection	• EXCLUDE - no data to extract

PHAC C 27.X Evidence review 1 – appendix 3

Frew et al 2014	Cost-effectiveness of a community-based physical activity programme for adults (be active) in the UK: an economic analysis within a natural experiment	• EXCLUDE on intervention
Frost (2010)	Effects of the built environment on physical activity of adults living in rural settings	• EXCLUDE - relevant systematic review
Ganten (2010)	Health co-benefits of policies to tackle climate change	• EXCLUDE - no data to extract
Garrard and Crawford, 2010	Evaluation of the Victorian Ride2School Program: Impacts and Insights into Promoting Active Travel to School.	• EXCLUDE on intervention
Geraghty (2009)	Partnership Moves Community Toward Complete Streets	• EXCLUDE on study type
Gerike (2016)	Physical Activity through Sustainable Transport Approaches (PASTA): A study protocol for a multicentre project	• EXCLUDE - no data to extract
Ghekiere (2014)	Critical environmental factors for transportation cycling in children: A qualitative study using bike-along interviews	• EXCLUDE - study type
Gomez-Feliciano (2009)	Active Living Logan Square: Joining Together to Create Opportunities for Physical Activity	• EXCLUDE on intervention
Gotschi (2011)	Costs and benefits of bicycling investments in Portland, Oregon	• EXCLUDE - study type
Greg (2010)	Do transport planning tools reflect the needs of the older traveller?	• EXCLUDE - qualitative
Guell (2012)	Towards a differentiated understanding of active travel behaviour: using social theory to explore everyday commuting	• EXCLUDE on intervention
Gunn L D, Lee Y, Geelhoed E, Shiell A, and Giles-Corti B, 2014	The cost-effectiveness of installing sidewalks to increase levels of transport-walking and health	• EXCLUDE on study type [Info] Cross sectional survey
Guo (2010)	An economic evaluation of health-promotive built environment changes	• EXCLUDE - study type
Haerens et al 2007	Acceptability, feasibility and effectiveness of a computer-tailored physical activity intervention in adolescents	• EXCLUDE on intervention
Hallgrimsdottir Berglind, Svensson Helena, and Stahl Agneta, 2015	Long term effects of an intervention in the outdoor environment--a comparison of older people's perception in two residential areas, in one of which accessibility improvements were introduced	• EXCLUDE on study type [Info] Cross sectional survey
Heath (2012)	Evidence-based intervention in physical activity: Lessons from around the world	• EXCLUDE - relevant systematic review

PHAC C 27.X Evidence review 1 – appendix 3

Heinen (2015)	Sociospatial patterning of the use of new transport infrastructure: Walking, cycling and bus travel on the Cambridgeshire guided busway	• EXCLUDE - study type
Henderson (2013)	Safe routes to school: a public health practice success story-Atlanta, 2008-2010	• EXCLUDE on intervention
Hinckson (2011)	School travel plans: preliminary evidence for changing school-related travel patterns in elementary school children	• EXCLUDE on intervention
Hooker (2007)	Walkable Neighborhoods for Seniors: The Alameda County experience	• EXCLUDE on intervention
Hooker (2009)	Evaluation of the Walkable Neighborhoods for Seniors Project in Sacramento County	• EXCLUDE on intervention
Hooper (2014)	Evaluating the Implementation and Active Living Impacts of a State Government Planning Policy Designed to Create Walkable Neighborhoods in Perth, Western Australia	• EXCLUDE - no baseline data
Hunter (2015)	The impact of interventions to promote physical activity in urban green space: A systematic review and recommendations for future research	• EXCLUDE relevant systematic review
Hylton (2007)	The Walking Life	• EXCLUDE - no data to extract
Impacts of better use... (2009)	Impacts of better use transport interventions - review of the evaluation evidence base	• EXCLUDE - unavailable
Irvine (2013)	Understanding urban green space as a health resource: A qualitative comparison of visit motivation and derived effects among park users in sheffield, UK	• EXCLUDE - Qualitative
Jalaludin B, Maxwell M, Saddik B, Lobb E, Byun R, Gutierrez R, and Paszek J, 2012	A pre-and-post study of an urban renewal program in a socially disadvantaged neighbourhood in Sydney, Australia	• EXCLUDE on intervention
Jones (2012)	Getting the British back on bicycles - The effects of urban traffic-free paths on everyday cycling	• EXCLUDE - study type
Jones (2012)	Motivations for active commuting: a qualitative investigation of the period of home or work relocation	• EXCLUDE - study type
Jones et al 2016	CycleBOOM: Design for lifelong health and wellbeing	• EXCLUDE - qualitative
