This standard is based on NG18.

This standard should be read in conjunction with QS6, QS94, QS109, QS120, QS127, QS131, QS134, QS175 and QS196.

Introduction

This quality standard covers the diagnosis and management of type 1 and type 2 diabetes in children and young people aged under 18. This quality standard will not cover care for children and young people with other forms of diabetes mellitus (such as monogenic diabetes or cystic fibrosis-related diabetes). Management of diabetes in women aged under 18 who are planning pregnancy or already pregnant is covered by the NICE’s guideline on diabetes in pregnancy and quality standard on diabetes in pregnancy.

For more information see the diabetes in children and young people topic overview.

Why this quality standard is needed

Diabetes is a long-term condition that can have a major impact on the life of a child or young person, as well as their family or carers. In addition to insulin therapy, diabetes management should include education, support and access to psychological services. Preparations should also be made for the transition from paediatric to adult services, which have a different model of care and evidence base.

Type 1 diabetes is becoming more common in the UK, and since 2004 type 2 diabetes is also being diagnosed with increasing frequency. The Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit identified 26,364 children and young people with type 1 diabetes and 533 with type 2 diabetes. Much of the general care for type 2 diabetes is the same as for type 1 diabetes, although the initial management is different.

Since 2004 there have been major changes to the routine management of type 1 diabetes in an attempt to achieve much stricter targets for blood glucose control, to further reduce the long-term risks associated with the condition. NICE’s guideline on diabetes in children and young people is the first national guidance for children and young people to recommend attempting to reach a glycated haemoglobin (HbA1c) level near the normal range and near normoglycaemia. This tight control may be achieved by intensive insulin management (multiple daily injections or insulin pump...
therapy) from diagnosis, accompanied by carbohydrate counting. Newer technology such as continuous subcutaneous glucose monitoring may also help children and young people to achieve better blood glucose control, although this is not currently advised for all children and young people with type 1 diabetes.

The quality standard is expected to contribute to improvements in the following outcomes:

- prompt diagnosis of type 1 diabetes
- control of blood glucose and HbA1c levels
- diabetes complications (for example, prevention of diabetic ketoacidosis [DKA])
- quality of life
- patient, parent and carer satisfaction
- life expectancy.

How this quality standard supports delivery of outcome frameworks

NICE quality standards are a concise set of prioritised statements designed to drive measurable improvements in the 3 dimensions of quality – safety, experience and effectiveness of care – for a particular area of health or care. They are derived from high-quality guidance, such as that from NICE or other sources accredited by NICE. This quality standard, in conjunction with the guidance on which it is based, should contribute to the improvements outlined in the following 2 outcome frameworks published by the Department of Health:

- NHS Outcomes Framework 2016 to 2017

Coordinated services

The quality standard for diabetes in children and young people specifies that services should be commissioned from and coordinated across all relevant agencies encompassing the whole diabetes care pathway. A person-centred, integrated approach to providing services is fundamental to delivering high-quality care to children and young people with diabetes.
The Health and Social Care Act 2012 sets out a clear expectation that the care system should consider NICE quality standards in planning and delivering services, as part of a general duty to secure continuous improvement in quality. Commissioners and providers of health and social care should refer to the library of NICE quality standards when designing high-quality services. Other quality standards that should also be considered when choosing, commissioning or providing a high-quality service for children and young people with diabetes are listed in related NICE quality standards.

**Training and competencies**

The quality standard should be read in the context of national and local guidelines on training and competencies. All healthcare professionals involved in assessing, caring for and treating children and young people with diabetes should have sufficient and appropriate training and competencies to deliver the actions and interventions described in the quality standard. Quality statements on staff training and competency are not usually included in quality standards. However, recommendations in the development sources on specific types of training for the topic that exceed standard professional training are considered during quality statement development.

**Role of families and carers**

Quality standards recognise the important role families and carers have in supporting children and young people with diabetes. If appropriate, healthcare professionals should ensure that family members and carers are involved in the decision-making process about investigations, treatment and care.
List of quality statements

**Statement 1** Children and young people presenting in primary care with suspected diabetes are referred to and seen by a multidisciplinary paediatric diabetes team on the same day.

**Statement 2** Children and young people with type 1 or type 2 diabetes are offered a programme of diabetes education from diagnosis that is updated at least annually.

**Statement 3** Children and young people with type 1 diabetes are offered intensive insulin therapy and level 3 carbohydrate-counting education at diagnosis.

**Statement 4** Children and young people with type 1 diabetes who have frequent severe hypoglycaemia are offered ongoing real-time continuous glucose monitoring with alarms.

**Statement 5** Children and young people with type 1 diabetes are offered blood ketone testing strips and a blood ketone meter.

**Statement 6** Children and young people with type 1 or type 2 diabetes are offered access to mental health professionals with an understanding of diabetes.
Quality statement 1: Same-day referral and appointments

Quality statement

Children and young people presenting in primary care with suspected diabetes are referred to and seen by a multidisciplinary paediatric diabetes team on the same day.

Rationale

Multidisciplinary paediatric diabetes teams can confirm a diagnosis of diabetes and provide immediate care. Children and young people whose diagnosis and care are delayed are at higher risk of diabetic ketoacidosis (DKA), which is life-threatening but preventable.

Quality measures

Structure

Evidence of local arrangements and written clinical protocols to ensure that children and young people presenting in primary care with suspected diabetes are referred to and seen by a multidisciplinary paediatric diabetes team on the same day.

Data source: Local data collection.

Process

Proportion of children and young people presenting in primary care with suspected diabetes who are referred to and seen by a multidisciplinary paediatric diabetes team on the same day.

Numerator – the number in the denominator who are referred to and seen by a multidisciplinary paediatric diabetes team on the same day.

Denominator – the number of children and young people presenting in primary care with suspected diabetes.

Data source: Local data collection.
Outcome

Presentations of DKA.

Data source: Local data collection.

What the quality statement means for different audiences

Service providers (primary care services) ensure that systems are in place for children and young people presenting in primary care with suspected diabetes to be referred to and seen by a multidisciplinary paediatric diabetes team on the same day.

Healthcare professionals (such as GPs) immediately refer children and young people presenting in primary care with suspected diabetes to a multidisciplinary paediatric diabetes team, to be seen on the same day.

Commissioners (NHS England regional teams and clinical commissioning groups) commission services that make sure children and young people presenting in primary care with suspected diabetes are immediately referred to and seen by a multidisciplinary paediatric diabetes team.

Children and young people who see their GP with suspected diabetes are immediately referred to and seen by a team that specialises in caring for children and young people with diabetes. The symptoms of diabetes include feeling very thirsty or tired, needing to urinate more often than usual, or recently losing weight without trying to.

Source guidance

Diabetes (type 1 and type 2) in children and young people: diagnosis and management. NICE guideline NG18 (2015, updated 2020), recommendation 1.1.2

Definition of terms used in this quality statement

Suspected diabetes

Recognised symptoms of diabetes in children and young people include one of more of the following: increased thirst, increased urination, excessive tiredness and recent unexplained weight loss. A plasma glucose level above 11 mmol/litre indicates the presence of diabetes. [Expert
Equality and diversity considerations

Particular care should be taken when communicating with children and young people with diabetes and their family members or carers (as appropriate) if they have, for example:

- physical, cognitive or sensory disabilities
- difficulties speaking or reading English.
Quality statement 2: Education and information

Quality statement

Children and young people with type 1 or type 2 diabetes are offered a programme of diabetes education from diagnosis that is updated at least annually.

Rationale

Education is essential in enabling self-management of diabetes and reducing the chance of complications. It should start at diagnosis and continue throughout a person's life. It is important to focus education on core topics and tailor it to the individual needs and learning styles of the child or young person and their family members or carers (as appropriate).

Quality measures

Structure

a) Evidence of local arrangements and written protocols to ensure that children and young people with type 1 diabetes are offered a programme of diabetes education from diagnosis that is updated at least annually.

Data source: Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.

b) Evidence of local arrangements and written protocols to ensure that children and young people with type 2 diabetes are offered a programme of diabetes education from diagnosis that is updated at least annually.

Data source: Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.

Process

a) Proportion of children and young people with type 1 diabetes who are offered a programme of diabetes education from diagnosis that is updated at least annually.
Numerator – the number in the denominator who receive a programme of diabetes education from diagnosis that is updated at least annually.

Denominator – the number of children and young people with type 1 diabetes.

**Data source:** Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.

b) Proportion of children and young people with type 2 diabetes who are offered a programme of diabetes education from diagnosis that is updated at least annually.

Numerator – the number in the denominator who receive a programme of diabetes education from diagnosis that is updated at least annually.

Denominator – the number of children and young people with type 2 diabetes.

**Data source:** Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.

**Outcome**

a) Quality of life.

**Data source:** Local data collection.

b) HbA1c level of 48 mmol/mol or lower.

**Data source:** Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.

c) Satisfaction of children, young people and their family members or carers (as appropriate) with the education intervention.

**Data source:** Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.
What the quality statement means for different audiences

**Service providers** (secondary care diabetes services for children and young people) ensure that systems are in place to offer children and young people with type 1 or type 2 diabetes and their family members or carers (as appropriate) a programme of diabetes education from diagnosis that is tailored to their individual needs and learning styles and updated at least annually.

**Healthcare professionals** (such as those providing diabetes services for children and young people) offer children and young people with type 1 or type 2 diabetes and their family members or carers (as appropriate) a programme of diabetes education from diagnosis that is tailored to their individual needs and learning styles and updated at least annually.

**Commissioners** (NHS England regional teams and clinical commissioning groups) commission services that offer children and young people with type 1 or type 2 diabetes and their family members or carers (as appropriate) a programme of diabetes education from diagnosis that is updated at least annually.

**Children and young people with type 1 or type 2 diabetes** and their family members or carers are offered a programme of diabetes education when they are diagnosed with diabetes. This education should continue throughout their life, and be updated every year.

The programme should teach them what they need to know about their condition and what changes they might need to make now that they have diabetes. This includes clear advice (designed specifically for each child or young person) on what to do when they are ill or have high blood glucose levels.

Source guidance

*Diabetes (type 1 and type 2) in children and young people: diagnosis and management. NICE guideline NG18* (2015, updated 2020), recommendations 1.2.1, 1.2.74 and 1.3.1

Definitions of terms used in this quality statement

**Programme of diabetes education (type 1 diabetes)**

A continuing programme of education that is age appropriate, tailored to need and revisited at least annually. The following core topics should be included from diagnosis:
• insulin therapy, including its aims, how it works, how to take it and how to adjust the dosage

• blood glucose monitoring, including blood glucose and HbA1c targets

• how diet, physical activity and intercurrent illness affect blood glucose levels

• managing intercurrent illness ('sick-day rules', including monitoring of blood ketones [beta-hydroxybutyrate])

• detecting and managing hypoglycaemia, hyperglycaemia and ketosis.

[Adapted from NICE's guideline on diabetes (type 1 and type 2) in children and young people, recommendation 1.2.1 and expert opinion]

Programme of diabetes education (type 2 diabetes)

A continuing programme of education that is age appropriate, tailored to need and revisited at least annually. The following core topics should be included from diagnosis:

• HbA1c monitoring and targets

• how diet, physical activity, body weight and intercurrent illness affect blood glucose levels

• how metformin can help and possible adverse effects

• the complications of type 2 diabetes and how to prevent them.

[Adapted from NICE's guideline on diabetes (type 1 and type 2) in children and young people, recommendation 1.3.1 and expert opinion]

Equality and diversity considerations

Particular care should be taken when communicating with children and young people with type 1 or type 2 diabetes and their family members or carers (as appropriate) if they have, for example:

• physical, cognitive or sensory disabilities

• difficulties speaking or reading English.
Quality statement 3: Intensive insulin therapy and level 3 carbohydrate-counting education for type 1 diabetes

Quality statement

Children and young people with type 1 diabetes are offered intensive insulin therapy and level 3 carbohydrate-counting education at diagnosis.

Rationale

The aim of intensive insulin therapy is to reach near-normal blood glucose levels, to reduce the risk of long-term complications and improve quality of life. Dietary management can also improve control of blood glucose and HbA1c levels. When using intensive insulin therapy it is important to match the insulin dose to carbohydrate intake, in line with individualised insulin-to-carbohydrate ratios (level 3 carbohydrate-counting). Children and young people and their family members or carers (as appropriate) should be taught how to do this at diagnosis.

Quality measures

Structure

Evidence of local arrangements and written clinical protocols to ensure that children and young people with type 1 diabetes are offered intensive insulin therapy and level 3 carbohydrate-counting education at diagnosis.

Data source: Local data collection.

Process

Proportion of children and young people with type 1 diabetes who are offered intensive insulin therapy and level 3 carbohydrate-counting education at diagnosis.

Numerator – the number in the denominator who receive intensive insulin therapy and level 3 carbohydrate-counting education at diagnosis.
Denominator – the number of children and young people with type 1 diabetes.

**Data source:** Local data collection.

**Outcome**

a) HbA1c level of 48 mmol/mol or lower.

**Data source:** Local data collection and the *Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit*.

b) Quality of life.

**Data source:** Local data collection and the *Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit*.

**What the quality statement means for different audiences**

**Service providers** (secondary care diabetes services for children and young people) ensure that systems are in place to offer intensive insulin therapy and level 3 carbohydrate-counting education at diagnosis to children and young people with type 1 diabetes.

**Healthcare professionals** (those providing diabetes services for children and young people) offer intensive insulin therapy and level 3 carbohydrate-counting education at diagnosis to children and young people with type 1 diabetes.

**Commissioners** (NHS England regional teams and clinical commissioning groups) commission services that offer intensive insulin therapy and level 3 carbohydrate-counting education at diagnosis to children and young people with type 1 diabetes.

**Children and young people with type 1 diabetes** are offered intensive insulin therapy (either multiple daily injections or an insulin pump) and level 3 carbohydrate-counting education at diagnosis.

'Multiple daily injections' means injecting a long-acting (slow) insulin once or twice a day, and a rapid-acting (fast) insulin before eating. An insulin pump is a small machine connected to your body that gives you insulin throughout the day, so you don't need to inject yourself.
'Level 3 carbohydrate counting' means counting the carbohydrates in your food and drink, so you can make sure you are injecting the right amount of insulin.

Source guidance

Diabetes (type 1 and type 2) in children and young people: diagnosis and management. NICE guideline NG18 (2015, updated 2020), recommendations 1.2.18, 1.2.19 and 1.2.38

Definitions of terms used in this quality statement

Intensive insulin therapy

Insulin therapy is aimed at reaching near-normal blood glucose levels. There are 2 types of intensive insulin therapy:

Multiple daily injection basal–bolus insulin regimens

An intermediate or long-acting insulin that is usually injected once or twice a day (basal), and a rapid-acting insulin that is injected as needed before each meal and snack. [Adapted from NICE's 2015 full guideline on diabetes (type 1 and type 2) in children and young people and expert opinion]

Continuous subcutaneous insulin infusion (insulin pump therapy)

A programmable pump and insulin storage device that delivers a background or basal supply of insulin (either a rapid-acting analogue or a short-acting insulin) and boluses of insulin as needed, through a subcutaneous needle or cannula. [Adapted from NICE's 2015 full guideline on diabetes (type 1 and type 2) in children and young people and expert opinion]

Level 3 carbohydrate counting

Carbohydrate counting for people with type 1 diabetes who are using intensive insulin regimens (multiple daily injections or insulin pump) involves calculating insulin-to-carbohydrate ratios that are individualised according to age, sex, pubertal status, duration of diabetes, time of day and activity. Pre-meal insulin is adjusted according to the estimated carbohydrate content of meals and snacks using the specified insulin-to-carbohydrate ratios. [Adapted from NICE's full guideline on diabetes (type 1 and type 2) in children and young people and expert opinion]
Equality and diversity considerations

Particular care should be taken when communicating with children and young people with type 1 diabetes and their family members or carers (as appropriate) if they have, for example:

- physical, cognitive or sensory disabilities
- different cultural, ethnic or family traditions to the healthcare professional
- difficulties speaking or reading English.
Quality statement 4: Continuous glucose monitoring in type 1 diabetes

Quality statement

Children and young people with type 1 diabetes who have frequent severe hypoglycaemia are offered ongoing real-time continuous glucose monitoring with alarms.

Rationale

Continuous glucose monitoring helps children and young people with type 1 diabetes and their family members or carers (as appropriate) to respond more quickly to changes in blood glucose levels throughout the day. For children and young people with frequent severe hypoglycaemia (particularly those who have difficulty recognising or reporting it), continuous glucose monitoring can help to improve their control of blood glucose and HbA1c levels.

Quality measures

Structure

Evidence of local arrangements and written clinical protocols to ensure that children and young people with type 1 diabetes who have frequent severe hypoglycaemia are offered ongoing real-time continuous glucose monitoring with alarms.

Data source: Local data collection.

Process

Proportion of children and young people with type 1 diabetes with frequent severe hypoglycaemia who are offered ongoing real-time continuous glucose monitoring with alarms.

Numerator – the number in the denominator who receive ongoing real-time continuous glucose monitoring with alarms.

Denominator – the number of children and young people with type 1 diabetes who have frequent severe hypoglycaemia.
Data source: Local data collection.

Outcome

a) HbA1c level of 48 mmol/mol or lower.

Data source: Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.

b) Quality of life.

Data source: Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.

What the quality statement means for different audiences

Service providers (secondary care providers) ensure that systems are in place to offer ongoing real-time continuous glucose monitoring with alarms to children and young people with type 1 diabetes who have frequent severe hypoglycaemia.

Healthcare professionals (such as consultants) offer ongoing real-time continuous glucose monitoring with alarms to children and young people with type 1 diabetes who have frequent severe hypoglycaemia.

Commissioners (NHS England regional teams) commission services that offer ongoing real-time continuous glucose monitoring with alarms to children and young people with type 1 diabetes who have frequent severe hypoglycaemia.

Children and young people with type 1 diabetes who have frequent severe hypoglycaemia (a hypo that they need help from someone else to treat) are offered ongoing real-time continuous glucose monitoring with alarms. This is special equipment that checks the person's blood glucose all the time, without them having to do finger-prick tests. It sounds an alarm if blood glucose levels fall too low.

Source guidance

Diabetes (type 1 and type 2) in children and young people: diagnosis and management. NICE
Definitions of terms used in this quality statement

Frequent severe hypoglycaemia

Having low blood glucose levels that require assistance from another person to treat. 'Frequent' is when this is happening often enough to have a significant impact on school, work or quality of life. [Expert opinion and Diabetes.co.uk]

Ongoing real-time continuous glucose monitoring with alarms

A type of system for continually monitoring glucose. 'Ongoing' means the device is used for weeks, months or longer. 'Real-time continuous' means the device takes real-time measurements for as long as it is worn. [Expert opinion and Juvenile Diabetes Research Foundation]
Quality statement 5: Blood ketone monitoring in type 1 diabetes

Quality statement

Children and young people with type 1 diabetes are offered blood ketone testing strips and a blood ketone meter.

Rationale

Insufficient insulin can lead to increased ketone levels which, if untreated, can lead to progressive dehydration and diabetic ketoacidosis (DKA). The risk of DKA is increased if a child or young person with type 1 diabetes has an illness such as flu or a urinary tract infection, or has missed some insulin doses. NICE’s guideline on diabetes (type 1 and type 2) in children and young people suggests that blood ketone testing is more cost effective than urine ketone testing for preventing hospital admission during intercurrent illness. It is important not to use out-of-date testing strips because the result might not be accurate. Education on how to prevent, detect and manage increased ketone levels is also vital.

Quality measures

Structure

Evidence of local arrangements to ensure that children and young people with type 1 diabetes are offered blood ketone testing strips and a blood ketone meter.

Data source: Local data collection.

Process

Proportion of children and young people with type 1 diabetes who receive blood ketone testing strips and a blood ketone meter.

Numerator – the number in the denominator who receive blood ketone testing strips and a blood ketone meter.
Denominator – the number of children and young people with type 1 diabetes.

**Data source:** Local data collection.

**Outcome**

a) DKA.

**Data source:** Local data collection and the *Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit*.

b) Hospital admission rates.

**Data source:** Local data collection and the *Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit*.

c) Mortality.

**Data source:** Local data collection and the *Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit*.

d) Satisfaction of children and young people with type 1 diabetes and their family members or carers (as appropriate) with blood ketone testing strips and blood ketone meters.

**Data source:** Local data collection.

**What the quality statement means for different audiences**

**Service providers** (primary and secondary care providers) ensure that systems are in place to offer children and young people with type 1 diabetes blood ketone testing strips and a blood ketone meter.

**Healthcare professionals** (such as GPs and consultants) offer children and young people with type 1 diabetes blood ketone testing strips and a blood ketone meter, and advise them and their parents or carers on how to prevent, detect and manage increased ketone levels.

**Commissioners** (clinical commissioning groups) commission services that offer children and young
people with type 1 diabetes blood ketone testing strips and a blood ketone meter.

Children and young people with type 1 diabetes are offered blood ketone testing strips and a blood ketone meter to measure ketones in their blood. When people need more insulin (because they are ill or have missed some insulin doses) their body makes ketones, and too many ketones can make people very ill – this is called diabetic ketoacidosis, or DKA for short.

Source guidance

Diabetes (type 1 and type 2) in children and young people: diagnosis and management. NICE guideline NG18 (2015, updated 2020), recommendation 1.2.75

Equality and diversity considerations

Particular care should be taken when communicating with children and young people with type 1 diabetes and their family members or carers (as appropriate) if they have, for example:

- physical, cognitive or sensory disabilities
- difficulties speaking or reading English.
Quality statement 6: Access to mental health professionals with an understanding of type 1 or type 2 diabetes

Quality statement

Children and young people with type 1 or type 2 diabetes are offered access to mental health professionals with an understanding of diabetes.

Rationale

Psychological issues (such as anxiety, depression, behavioural problems, eating disorders, conduct disorders and family conflict) and psychosocial issues have a significant and adverse impact on the management of type 1 and type 2 diabetes, and on the general wellbeing of children and young people and their family members or carers.

Children and young people with diabetes are at high risk of anxiety and depression, and it is important that they have early access to mental health professionals when they need it. Mental health professionals who have an understanding of diabetes and the particular problems it causes are essential for delivering psychological interventions and engaging with children, young people and their families.

Quality measures

Structure

Evidence of local arrangements to ensure that children and young people with type 1 or type 2 diabetes are offered access to mental health professionals with an understanding of diabetes.

Data source: Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.

Process

a) Proportion of children and young people with type 1 diabetes who are offered access to mental
health professionals with an understanding of diabetes.

Numerator – the number in the denominator who have access to mental health professionals with an understanding of diabetes.

Denominator – the number of children and young people with type 1 diabetes.

**Data source:** Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.

b) Proportion of children and young people with type 2 diabetes who are offered access to mental health professionals with an understanding of diabetes.

Numerator – the number in the denominator who have access to mental health professionals with an understanding of diabetes.

Denominator – the number of children and young people with type 2 diabetes.

**Data source:** Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.

Outcome

a) Self-management of type 1 and type 2 diabetes.

**Data source:** Local data collection.

b) Adverse events (for example, severe hypoglycaemic episodes, diabetic ketoacidosis [DKA] or self-harm).

**Data source:** Local data collection.

c) Quality of life.

**Data source:** Local data collection and the Royal College of Paediatrics and Child Health 2013 to 2014 National Paediatric Diabetes Audit.

d) Satisfaction of children, young people and their family members or carers (as appropriate) with
the intervention.

**Data source:** Local data collection.

e) Anxiety or depression.

**Data source:** Local data collection.

f) School performance or attendance.

**Data source:** Local data collection.

### What the quality statement means for different audiences

**Service providers** (secondary care providers) ensure that systems are in place to offer children and young people with type 1 or type 2 diabetes access to mental health professionals with an understanding of diabetes.

**Healthcare professionals** (such as consultants) offer children and young people with type 1 or type 2 diabetes access to mental health professionals who have an understanding of diabetes and the particular problems it causes and can deliver psychological interventions and engage with children, young people and their families.

**Commissioners** (NHS England regional teams and clinical commissioning groups) commission services that offer children and young people with type 1 or type 2 diabetes access to mental health professionals with an understanding of diabetes.

**Children and young people with type 1 or type 2 diabetes** are able to see mental health professionals who understand the types of problems people with diabetes can have. The mental health professional should be one of the main members of the diabetes team.

### Source guidance

*Diabetes (type 1 and type 2) in children and young people: diagnosis and management. NICE guideline NG18* (2015, updated 2020), recommendations 1.2.99 and 1.3.36.
Definition of terms used in this quality statement

Access

Multidisciplinary paediatric diabetes teams should include a psychologist, and provide access to them in an appropriate timeframe. Each child and young person with type 1 or type 2 diabetes should have an annual assessment by their multidisciplinary team to decide whether they need support from the psychologist. [Adapted from NICE's 2015 full guideline on diabetes (type 1 and type 2) in children and young people and expert opinion]

Equality and diversity considerations

Particular care should be taken when communicating with children and young people with type 1 or type 2 diabetes and their family members or carers (as appropriate) if they have, for example:

- physical, cognitive or sensory disabilities
- difficulties speaking or reading English
- an increased risk of psychological difficulties.
Using the quality standard

Quality measures

The quality measures accompanying the quality statements aim to improve the structure, process and outcomes of care in areas identified as needing quality improvement. They are not a new set of targets or mandatory indicators for performance management.

See NICE’s how to use quality standards for further information, including advice on using quality measures.

Levels of achievement

Expected levels of achievement for quality measures are not specified. Quality standards are intended to drive up the quality of care, and so achievement levels of 100% should be aspired to (or 0% if the quality statement states that something should not be done). However, NICE recognises that this may not always be appropriate in practice, taking account of safety, choice and professional judgement, and therefore desired levels of achievement should be defined locally.

NICE’s quality standard service improvement template helps providers to make an initial assessment of their service compared with a selection of quality statements. It includes assessing current practice, recording an action plan and monitoring quality improvement. This tool is updated monthly to include new quality standards.

Using other national guidance and policy documents

Other national guidance and current policy documents have been referenced during the development of this quality standard. It is important that the quality standard is considered alongside the documents listed in development sources.
Diversity, equality and language

During the development of this quality standard, equality issues have been considered and equality assessments for this quality standard are available.

Good communication between healthcare professionals and children and young people with type 1 or type 2 diabetes, and their families or carers (if appropriate), is essential. Treatment, care and support, and the information given about it, should be both age-appropriate and culturally appropriate. It should also be accessible to people with additional needs such as physical, sensory or learning disabilities, and to people who do not speak or read English. Children and young people with type 1 or type 2 diabetes and their families or carers (if appropriate) should have access to an interpreter or advocate if needed.

Commissioners and providers should aim to achieve the quality standard in their local context, in light of their duties to have due regard to the need to eliminate unlawful discrimination, advance equality of opportunity and foster good relations. Nothing in this quality standard should be interpreted in a way that would be inconsistent with compliance with those duties.
Development sources

Evidence sources

The documents below contain recommendations from NICE guidance or other NICE-accredited recommendations that were used by the Quality Standards Advisory Committee to develop the quality standard statements and measures.

Diabetes (type 1 and type 2) in children and young people: diagnosis and management. NICE guideline NG18 (2015, updated 2020)

Policy context

It is important that the quality standard is considered alongside current policy documents, including:

Quality Standards Advisory Committee and NICE project team

Quality Standards Advisory Committee

This quality standard has been developed by Quality Standards Advisory Committee. Membership of this committee is as follows:

Dr Ivan Benett
Clinical Director, Central Manchester Clinical Commissioning Group

Dr Gita Bhutani
Associate Director for Psychological Professions, Lancashire Care NHS Foundation Trust

Mrs Jennifer Bostock
Lay member

Dr Helen Bromley
Consultant in Public Health, Cheshire West and Chester Council

Ms Amanda de la Motte
Deputy Chief Nurse, South Lincolnshire Clinical Commissioning Group

Mr Phillip Dick
Psychiatric Liaison Team Manager, West London Mental Health Trust

Ms Phyllis Dunn
Clinical Lead Nurse, University Hospital of North Staffordshire

Dr Steve Hajioff
Director of Public Health, London Borough of Hillingdon

Dr Ian Manifold
Head of Measures Development, National Peer Review Programme, NHS England

Mr Gavin Maxwell
Lay member

Ms Teresa Middleton
Deputy Director of Quality, NHS Gloucestershire Clinical Commissioning Group

Mrs Juliette Millard
UK Nursing and Health Professions Adviser, Leonard Cheshire Disability

Hazel Trender
Senior Vascular Nurse Specialist, Sheffield Teaching Hospital Trust

Dr Hugo van Woerden
Director of Public Health, NHS Highland

Dr Bee Wee (Chair)
Consultant and Senior Clinical Lecturer in Palliative Medicine, Oxford University Hospitals NHS Trust and Oxford University

Ms Karen Whitehead
Strategic Lead Health, Families and Partnerships, Bury Council

Ms Alyson Whitmarsh
Programme Head for Clinical Audit, Health and Social Care Information Centre

Ms Jane Worsley
Chief Operating Officer, Options Group, Alcester Heath, Warwickshire

Dr Arnold Zermansky
GP, Leeds

The following specialist members joined the committee to develop this quality standard:

Ms Laura Birch
Paediatric Research Dietitian

Mrs Jo Dalton
Diabetes Specialist Nurse – Transition
Dr Julie Edge  
Consultant in Paediatric Diabetes  

Mr Nikhil Gokani  
Lay member  

Dr Bill Lamb  
Consultant Paediatric Diabetologist  

Mrs Carol Metcalfe  
Lead Paediatric Diabetes Specialist Nurse  

NICE project team  

Nick Baillie  
Associate Director  

Karen Slade  
Consultant Clinical Adviser  

Stephanie Birtles  
Technical Adviser  

Sabina Keane  
Lead Technical Analyst  

Esther Clifford  
Programme Manager  

Jenny Mills  
Project Manager  

Jenny Mills and Julia Sus  
Coordinators
Update information

Minor changes since publication

**December 2020:** This quality standard has been updated to ensure alignment with the NICE guideline on diabetes (type 1 and type 2) in children and young people. Source guidance references have been amended for statements 2, 3, 4, 5 and 6. The definition of a programme of diabetes education for both type 1 and type 2 diabetes used in statement 2 on education and information has been updated to ensure alignment with this guideline.
About this quality standard

NICE quality standards describe high-priority areas for quality improvement in a defined care or service area. Each standard consists of a prioritised set of specific, concise and measurable statements. NICE quality standards draw on existing NICE or NICE-accredited guidance that provides an underpinning, comprehensive set of recommendations, and are designed to support the measurement of improvement.

The methods and processes for developing NICE quality standards are described in the quality standards process guide.

This quality standard has been included in the NICE Pathways on diabetes in children and young people and bedwetting in children and young people, which bring together everything we have said on a topic in an interactive flowchart.

NICE has produced a quality standard service improvement template to help providers make an initial assessment of their service compared with a selection of quality statements. This tool is updated monthly to include new quality standards.

NICE produces guidance, standards and information on commissioning and providing high-quality healthcare, social care, and public health services. We have agreements to provide certain NICE services to Wales, Scotland and Northern Ireland. Decisions on how NICE guidance and other products apply in those countries are made by ministers in the Welsh government, Scottish government, and Northern Ireland Executive. NICE guidance or other products may include references to organisations or people responsible for commissioning or providing care that may be relevant only to England.

Endorsing organisation

This quality standard has been endorsed by NHS England, as required by the Health and Social Care Act (2012)
Supporting organisations

Many organisations share NICE’s commitment to quality improvement using evidence-based guidance. The following supporting organisations have recognised the benefit of the quality standard in improving care for patients, carers, service users and members of the public. They have agreed to work with NICE to ensure that those commissioning or providing services are made aware of and encouraged to use the quality standard.

- Royal College of Paediatrics and Child Health
- Faculty of General Dental Practice
