

**NATIONAL INSTITUTE FOR HEALTH AND  
CARE EXCELLENCE**

**HEALTH AND SOCIAL CARE DIRECTORATE**

**QUALITY STANDARDS**

**Quality standard topic:** Atrial Fibrillation

**Output:** Equality analysis form – Meeting 1

## **Introduction**

As outlined in the [Quality Standards process guide](http://www.nice.org.uk) (available from [www.nice.org.uk](http://www.nice.org.uk)), NICE has a duty to have due regard to the need to eliminate unlawful discrimination, advance equality of opportunity, and foster good relations between people from different groups. The purpose of this form is to document the consideration of equality issues in each stage of the development process before reaching the final output that will be approved by the NICE Guidance Executive. This equality analysis is designed to support compliance with NICE's obligations under the Equality Act 2010 and Human Rights Act 1998.

Table 1 lists the equality characteristics and other equality factors NICE needs to consider, i.e. not just population groups sharing the 'protected characteristics' defined in the Equality Act but also those affected by health inequalities associated with socioeconomic factors or other forms of disadvantage. The table does not attempt to provide further interpretation of the protected characteristics. This is because it is likely to be simpler, and more efficient, to use the evidence underpinning the quality standard to define population groups within the broad protected characteristic categories rather than to start with possibly unsuitable checklists created for other purposes, such as social surveys or HR monitoring tools.

The form should be used to:

- confirm that equality issues have been considered and identify any relevant to the topic
- ensure that the quality standards outputs do not discriminate against any of the equality groups
- highlight planned action relevant to equality
- highlight areas where quality standards may advance equality of opportunity.

This form is completed by the NICE quality standards internal team at each stage within the development process:

- Topic overview (to elicit additional comments as part of active stakeholder engagement)
- Quality Standards Advisory Committee – meeting 1
- Quality Standards Advisory Committee – meeting 2

**Table 1**

|   |
|---|
| <b>Protected characteristics</b>  |
| <b>Age</b>  |
| <b>Disability</b>   |
| <b>Gender reassignment</b>  |
| <b>Pregnancy and maternity</b>  |
| <b>Race</b>   |
| <b>Religion or belief</b>   |
| <b>Sex</b>  |
| <b>Sexual orientation</b>   |
| <b>Other characteristics</b>  |
| <b>Socio-economic status</b><br>Depending on policy or other context, this may cover factors such as social exclusion and deprivation associated with geographical areas or inequalities or variations associated with other geographical distinctions (e.g. the North/South divide, urban versus rural). |
| <b>Marital status (including civil partnership)</b>   |

**Other categories**

Other groups in the population experience poor health because of circumstances often affected by, but going beyond, sharing a protected characteristic or socioeconomic status. Whether such groups are identifiable depends on the guidance topic and the evidence. The following are examples of groups covered in NICE guidance:

- Refugees and asylum seekers
- Migrant workers
- Looked after children
- Homeless people.

## Quality standards equality analysis

### Stage: Meeting 1

#### Topic: Atrial fibrillation

**1. Have any equality issues impacting upon equality groups been identified during this stage of the development process?**

- Please state briefly any relevant equality issues identified and the plans to tackle them during development.

Atrial fibrillation is the most common sustained cardiac arrhythmia. No equality issues impacting upon equality groups have been identified at this stage, although atrial fibrillation is more common in men than women, and the prevalence increases with age.

Any equality issues identified will be considered during the development of the quality standard.

**2. Have relevant bodies and stakeholders been consulted, including those with a specific interest in equalities?**

- Have comments highlighting potential for discrimination or advancing equality been considered?

This is the second stage of the process which will look to elicit comments from stakeholders.

Standing members for Quality Standards Advisory Committees (QSACs) have been recruited by open advert with relevant bodies and stakeholders given the opportunity to apply. In addition to these standing committee members, specialist committee members from a range of professional and lay backgrounds relevant to atrial fibrillation have been recruited. The topic overview and request for areas of quality improvement have been published and wide stakeholder comment received, including from those with a specific interest in equalities.

**3. Have any population groups, treatments or settings been excluded from coverage by the quality standard at this stage in the process? Are these exclusions legal and justified?**

- Are the reasons for justifying any exclusion legitimate?

The quality standard will not cover atrial fibrillation in children and young people (younger than 18 years) and will not apply to people with congenital heart disease precipitating atrial fibrillation. Atrial fibrillation in children and young people is rare without an underlying heart condition, and it would be this primary diagnosis that would be treated, rather than the atrial fibrillation. Congenital heart disease may be one of these causes and this would be treated rather than the atrial fibrillation, therefore these are excluded.

There are no other exclusions at this stage.

**4. If applicable, do any of the quality statements make it impossible or unreasonably difficult in practice for a specific group to access a service or element of a service?**

- Does access to a service or element of a service depend on membership of a specific group?
- Does a service or element of the service discriminate unlawfully against a group?
- Do people with disabilities find it impossible or unreasonably difficult to receive a service or element of a service?

Draft statements 1 – 5 are not expected to make it impossible or unreasonably difficult for a specific group to access a service or element of a service.

Draft statement 6 which is a developmental statement focuses on the provision of self-monitoring coagulometers. For adults who may have difficulty with or who are unable to self-monitor, such as people with disabilities, their carers should be considered to help with self-monitoring. Coagulometers currently come at a cost to the adult with atrial fibrillation. As a result reasonable adjustments should be made for the socio-economic status of the person with atrial fibrillation to be considered thereby aiding access to coagulometers.

**5. If applicable, does the quality standard advance equality?**

- Please state if the quality standard, including statements, measures and indicators, as described will advance equality of opportunity, for example by making access more likely for certain groups, by tailoring the service to certain groups, or by making reasonable adjustments for people with disabilities?

A positive impact is expected. We believe these draft statements promote equality by taking into consideration adults with atrial fibrillations needs and where necessary tailoring services appropriately.
