Lisocabtagene maraleucel (liso-cel; Breyanzi) is available on the NHS. It is a possible treatment for large B-cell lymphoma (diffuse large B-cell, high-grade B-cell, primary mediastinal large B-cell and follicular grade 3B) in adults when:

- the cancer has:
  - stopped responding to (refractory) chemotherapy plus immunotherapy (chemoimmunotherapy) as a first treatment (first-line), or
  - come back (relapsed) within 12 months after such treatment, and
- a stem cell transplant using a person's own cells (an autologous stem cell transplant) would be suitable.

## Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. See [our webpage on making decisions about your care](#).

## Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

## Information and support

The [NHS webpage on non-Hodgkin lymphoma](#) may be a good place to find out more.

These organisations can give you advice and support:

- [Lymphoma Action](#), 0808 808 5555
