

Linzagolix for treating symptoms of endometriosis

Information for the public

Published: 4 June 2025

www.nice.org.uk

Linzagolix (Yselty) with hormonal add-back therapy is available on the NHS as a possible treatment for the symptoms of endometriosis. It is for adults of reproductive age who have already had medicine or surgery for their endometriosis.

Hormonal add-back therapy is when small doses of hormones are used to reduce the side effects of a treatment (such as linzagolix) that lowers your body's natural hormone levels.

Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. See [our webpage on making decisions about your care](#).

Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

Information and support

The [NHS webpage on endometriosis](#) may be a good place to find out more.

[Endometriosis UK](#) (0808 808 2227) can give you advice and support.

You can also get support from your local [Healthwatch](#).
