

Zanubrutinib for treating relapsed or refractory mantle cell lymphoma

Information for the public

Published: 10 July 2025

www.nice.org.uk

Zanubrutinib (Brukinsa) is available on the NHS as a possible treatment for relapsed or refractory mantle cell lymphoma in adults who have had 1 line of treatment only.

Relapsed means the cancer has come back, and refractory means it has not responded well enough to treatment. Lines of treatment are a sequence of treatments, starting with the best option and moving to alternatives if the first does not work or the condition gets worse. Each line can be a single drug or a combination of drugs.

If you are not eligible for zanubrutinib but are already having it, you should be able to continue until you and your healthcare professional decide when best to stop.

Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. See [our webpage on making decisions about your care](#).

Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?
