

Lorlatinib for ALK-positive advanced non-small-cell lung cancer that has not been treated with an ALK inhibitor

Information for the public

Published: 21 October 2025

www.nice.org.uk

Lorlatinib (Lorviqua) is available on the NHS as a possible treatment for ALK-positive advanced non-small-cell lung cancer in adults who have not had an ALK inhibitor.

If you are not eligible for lorlatinib but are already having it, you should be able to continue until you and your healthcare professional decide when best to stop.

Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. See [our webpage on shared decision making](#).

Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

Information and support

The [NHS webpage on lung cancer](#) may be a good place to find out more.
