

Encorafenib with binimetinib for treating BRAF V600E mutation-positive advanced non-small-cell lung cancer

Information for the public

Published: 6 May 2026

www.nice.org.uk

Encorafenib (Braftovi) with binimetinib (Mektovi) is available on the NHS. It is a possible first-line treatment for BRAF V600E mutation-positive advanced non-small-cell lung cancer in adults.

Lines of treatment are a sequence of treatments, starting with the best option and moving to alternatives if the first does not work or the condition gets worse. Each line can be a single drug or a combination of drugs.

If you are not eligible for encorafenib with binimetinib but are already having it, you should be able to continue until you and your healthcare professional decide when best to stop.

Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. See [our webpage on shared decision making](#).

Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

Information and support

The [NHS webpage on lung cancer](#) may be a good place to find out more.

These organisations can give you advice and support:

- [Roy Castle Lung Cancer Foundation](#), 0333 323 7200
