

# Serplulimab with carboplatin and etoposide for untreated extensive-stage small-cell lung cancer

Information for the public

Published: 18 June 2026

[www.nice.org.uk](http://www.nice.org.uk)

Serplulimab (Hetronifly) with carboplatin and etoposide is available on the NHS as a possible treatment for untreated extensive-stage small-cell lung cancer in adults.

Extensive stage is when the cancer has spread beyond 1 lung and the nearby lymph nodes to other parts of the body.

## Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. See [our webpage on shared decision making](#).

## Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

## Information and support

The [NHS webpage on lung cancer](#) may be a good place to find out more.

These organisations can give you advice and support:

- [Roy Castle Lung Cancer Foundation](#), 0333 323 7200
