## Single Technology Appraisal

### Ocrelizumab for treating relapsing multiple sclerosis

#### Final scope

#### Remit/appraisal objective

To appraise the clinical and cost effectiveness of ocrelizumab within its marketing authorisation for treating relapsing forms of multiple sclerosis.

#### Background

Multiple sclerosis is a chronic, neurodegenerative disorder which affects the brain, optic nerves, and spinal cord. It often results in progressive neurological impairment and severe disability. Multiple sclerosis has an unpredictable course with variable severity and progression. Symptoms can include pain, disturbance to muscle tone including weakness or spasticity, chronic fatigue, unsteady gait, speech problems, incontinence, visual disturbance and cognitive impairment.

Approximately 90,000 people in England have multiple sclerosis, and about 4,200 people are diagnosed each year.<sup>1</sup> The relapsing form of multiple sclerosis affects approximately 85–90% of people at the time of diagnosis.<sup>2,3</sup> It is characterised by periods of remission (when symptoms are mild or disappear altogether) followed by relapses (which may or may not result in residual disability).

Current pharmacological management of multiple sclerosis includes disease-modifying agents to reduce the frequency and severity of relapses and the rate of disease progression. These agents include beta interferon and glatiramer acetate which are not currently recommended by NICE (technology appraisal guidance 32, currently being reviewed), but were available in the NHS through a risk-sharing scheme; this scheme has now ended and a clinical commissioning policy is in place. NICE recommends the following treatment options:

- teriflunomide and dimethyl fumarate for active relapsing-remitting multiple sclerosis, only if people do not have highly active or rapidly evolving severe relapsing-remitting multiple sclerosis (technology appraisal guidance 303 and 320 respectively)
- alemtuzumab for active relapsing–remitting multiple sclerosis (technology appraisal guidance 312)
- fingolimod for highly active relapsing-remitting multiple sclerosis in adults who have an unchanged or increased relapse rate or ongoing

severe relapses compared with the previous year despite treatment with beta interferon (technology appraisal guidance 254)

- natalizumab for rapidly-evolving severe relapsing-remitting multiple sclerosis (technology appraisal guidance 127)
- daclizumab for active relapsing–remitting multiple sclerosis (including highly active disease) previously treated with disease-modifying therapy, and for rapidly evolving severe relapsing–remitting multiple sclerosis, only if alemtuzumab is contraindicated or otherwise unsuitable (technology appraisal guidance 441).

### The technology

Ocrelizumab (Ocrevus, Roche) is a monoclonal antibody that selectively targets the CD20 surface antigen on B cells (a type of white blood cell). It promotes the destruction of B cells by the body's immune system. Ocrelizumab is administered by intravenous infusion.

Ocrelizumab does not currently have a marketing authorisation in the UK for treating multiple sclerosis. It has been studied in clinical trials, compared with interferon beta-1a, in people with relapsing multiple sclerosis.

<b>Intervention(s)</b>	Ocrelizumab
<b>Population(s)</b>	People with relapsing forms of multiple sclerosis

<p><b>Comparators</b></p>	<p>For people with relapsing-remitting multiple sclerosis:</p> <ul style="list-style-type: none"> <li>• alemtuzumab</li> <li>• dimethyl fumarate</li> <li>• teriflunomide</li> <li>• beta-interferon</li> <li>• glatiramer acetate</li> <li>• daclizumab (only if the disease has been previously treated with disease-modifying therapy, and alemtuzumab is contraindicated or otherwise unsuitable)</li> </ul> <p>For people with rapidly-evolving severe relapsing-remitting multiple sclerosis</p> <ul style="list-style-type: none"> <li>• alemtuzumab</li> <li>• natalizumab</li> <li>• daclizumab (only if alemtuzumab is contraindicated or otherwise unsuitable)</li> </ul> <p>For people with highly active relapsing-remitting multiple sclerosis despite previous treatment</p> <ul style="list-style-type: none"> <li>• alemtuzumab</li> <li>• fingolimod</li> <li>• daclizumab (only if alemtuzumab is contraindicated or otherwise unsuitable)</li> </ul> <p>For people with secondary progressive multiple sclerosis with active disease, evidenced by relapses</p> <ul style="list-style-type: none"> <li>• best supportive care</li> </ul>
---------------------------	--

<b>Outcomes</b>	<p>The outcome measures to be considered include:</p> <ul style="list-style-type: none"> <li>• relapse rate</li> <li>• severity of relapse</li> <li>• disability (for example, expanded disability status scale [EDSS])</li> <li>• symptoms of multiple sclerosis such as fatigue, cognition and visual disturbance</li> <li>• freedom from disease activity</li> <li>• mortality</li> <li>• adverse effects of treatment</li> <li>• health-related quality of life.</li> </ul>
<b>Economic analysis</b>	<p>The reference case stipulates that the cost effectiveness of treatments should be expressed in terms of incremental cost per quality-adjusted life year.</p> <p>The reference case stipulates that the time horizon for estimating clinical and cost effectiveness should be sufficiently long to reflect any differences in costs or outcomes between the technologies being compared.</p> <p>Costs will be considered from an NHS and Personal Social Services perspective.</p> <p>The availability of any patient access schemes for the intervention or comparator technologies will be taken into account.</p>

<p><b>Other considerations</b></p>	<p>Guidance will only be issued in accordance with the marketing authorisation. Where the wording of the therapeutic indication does not include specific treatment combinations, guidance will be issued only in the context of the evidence that has underpinned the marketing authorisation granted by the regulator.</p> <p>If the evidence allows, the following subgroups of people will be considered:</p> <ul style="list-style-type: none"> <li>• people whose disease has responded inadequately to previous treatment</li> <li>• people who could not tolerate previous treatment</li> <li>• people with relapsing-remitting multiple sclerosis</li> <li>• people with rapidly-evolving severe relapsing-remitting multiple sclerosis</li> <li>• people with highly active relapsing-remitting multiple sclerosis despite previous treatment</li> <li>• people in whom alemtuzumab is contraindicated or otherwise unsuitable</li> <li>• people with secondary progressive multiple sclerosis with active disease, evidenced by relapses.</li> </ul>
