Advice

NICE is unable to make a recommendation about the use in the NHS of selinexor with low-dose dexamethasone for treating refractory multiple myeloma. This is because Karyopharm Therapeutics has confirmed that it does not intend to make an evidence submission for the appraisal and will not be launching the technology in the UK.

Information

If NHS organisations wish to consider selinexor with low-dose dexamethasone for this indication, they should follow the advice on rational local decision making in the [NHS Constitution for England](#) and the [NHS Commissioning Board and Clinical Commissioning Groups \(Responsibilities and Standing Rules\) Regulations 2012](#). This outlines the approach that should be taken when there is no NICE guidance.

NICE will review the position if the company decides that it wants to make an evidence submission.
