

**Consultee and commentator responses to the review proposal consultation of NICE Technology Appraisal  
Guidance No 92 on the use of HealOzone for the treatment of tooth decay**

Consultee/commentator	Comment
Department of Health	<p>'The Department of Health is content for the original guidance to become static until there is sufficient evidence-based research available, supporting the intervention's effectiveness.</p> <p>There appears to be nothing to supplement the systematic review evidence in HTA Volume 10 No. 16 and its conclusion:</p> <p>"the current evidence base for HealOzone is insufficient to conclude that it is a cost-effective addition to the management and treatment of occlusal and root caries."</p>
