Indicator

The percentage of patients with dementia with the contact details of a named carer on their record.

Indicator type

General practice indicator suitable for use in the Quality and Outcomes Framework.

This document does not represent formal NICE guidance. For a full list of NICE indicators, see our [menu of indicators](#).

To find out how to use indicators and how we develop them, see our [NICE indicator process guide](#).

Rationale

The purpose of this indicator is to encourage practices to record the name and contact details of carers of people with dementia with the aim of improving communication between those involved in a person's care, including within the practice and with other teams (for example, out of hours services).

Source guidance

Dementia: assessment, management and support for people living with dementia and their carers. NICE guideline NG97 (2018), recommendation 1.1.7

Specification

Numerator: The number of patients in the denominator with the contact details of a named carer on their record.

Denominator: The number of patients with dementia.

Calculation: Numerator divided by the denominator, multiplied by 100.

Exclusions: Patients aged 18 years and under. This indicator does not relate to recording contact details of professional carers.

Minimum population: The indicator would be appropriate to assess performance at individual general practice level.
