## Indicator Equality Impact Assessment

**Indicator: IND203**

**Subject: Familial hypercholesterolemia (FH)**

1.1 Have any potential equality issues been identified during the development process?

No.

1.2 Have any population groups, treatments or settings been excluded from coverage by the indicator? Are these exclusions justified – that is, are the reasons legitimate and the exclusion proportionate?

This indicator only covers people aged under 29 years with a total cholesterol concentration greater than 7.5 mmol/l. A separate indicator is on the menu for people over 30.

1.3 Does the indicator make it more difficult in practice for a specific group to access services compared with other groups? If so, what are the barriers to, or difficulties with, access for the specific group?

No.

1.4 Is there potential for the indicator to have an adverse impact on people with disabilities because of something that is a consequence of the disability?

No.
