Indicator Equality Impact Assessment

Topic: Cardiovascular disease IND228

1.1 Have any potential equality issues been identified during the development process?

No.

1.2 Have any population groups, treatments or settings been excluded from coverage by the indicator? Are these exclusions justified – that is, are the reasons legitimate and the exclusion proportionate?

People with a diagnosis of CVD. This exclusion is justified as the aim of the indicator is to address primary prevention, which does not apply to those who have a diagnosis of CVD.

1.3 Does the indicator make it more difficult in practice for a specific group to access services compared with other groups? If so, what are the barriers to, or difficulties with, access for the specific group?

No.

1.4 Is there potential for the indicator to have an adverse impact on people with disabilities because of something that is a consequence of the disability?

No.
